Transnational Television in Europe Jean K. Chalaby,2009-02-19 Today transnational TV networks

count among television's most prestigious brands and rank among Europe's leading TV channels. This is the first, dynamically told story of the extraordinary journey of transnational television in Europe from struggling origins to its present day boom. It is based in extensive research into the international television industry and makes full use of its author's remarkable access to leading industry figures, from Sky and Turner to Discovery and BBC World. The tale begins with a few cross-border TV channels, who fought hostile governments, faced antagonism from the broadcasting establishment and provoked the contempt of advertisers. But, Jean Chalaby argues, the planets came into alignment for pan-European television in the late 1990s, when a transnational shift in European broadcasting was produced. He shows how transnational television and globalization have transformed one another, and how transfrontier TV networks reflect - and help sustain - a global economic order in which the connection between national territory and patterns of production and distribution have broken down.

Understanding World Media Dr Kumar Kaustubha, Dr Ajitabh & Mudita Agnihotri  
Sant, 2021-08-14 Understanding World Media sets out to mirror world media and the freedom it enjoyed across the globe in about 200 countries. While media is an important part of academic research, concerns have been raised globally on its content, intent and freedom of expression. To the extent that even as per the data compiled by Reporters Without Borders, democratic India ranks below par at 138 in the World Press Freedom Index 2018 out of the 180 listed nations. Though, it is a question of debate and discussions to what extent media in India is considered free or under censorship. When India is emerging as a global power with over 55 percent of its population is under 35 years of age, interest in the world community and media is growing leaps and bounds. It is in this context that this book magnifies its mirror to bring facts about the

status and understanding of media in the world. For any book like this, it will always have its challenges to cover subjects like media in a nutshell, but for today, this book is timely and relevant. It is a balanced and thoughtful effort to present such a comprehensive book in a crisp and concise manner, as it is difficult to get experts on various countries to write on their respective domains. We have put our utmost effort to consolidate all necessary information and analysis required for this collection and we are very hopeful that it will serve its purpose, fulfill the void and information gap about the world media. Understanding World Media is structured around two clear themes, the status of media in various countries and its freedom of expression. It is divided into five parts covering vast geographical areas in Asia, Europe, the Americas, Africa and Australia-Oceania.

Innovations in Satellite Communications and Satellite Technology Daniel Minoli, 2015-03-16

Surveys key advances in commercial satellite communications and what might be the implications and/or opportunities for end-users and service providers in utilizing the latest fast-evolving innovations in this field This book explores the evolving technical options and opportunities of satellite networks. Designed to be a self-contained reference, the book includes background technical material in an introductory chapter that will serve as a primer to satellite communications. The text discusses advances in modulation techniques, such as DBV-S2 extensions (DVS-S2X); spotbeam-based geosynchronous and medium earth orbit High Throughput Satellite (HTS) technologies and Internet applications; enhanced mobility services with aeronautical and maritime applications; Machine to Machine (M2M) satellite applications; emerging ultra HD technologies; and electric propulsion. The author surveys the latest innovations and service strategies and the

resulting implications, which involves: Discussing advances in modulation techniques and HTS spotbeam technologies Surveying emerging high speed aeronautical mobility services and maritime and other terrestrial mobility services Assessing M2M (machine-to-machine) applications, emerging Ultra HD video technologies and new space technology Satellite communication is an integral part of the larger fields of commercial, television/media, government, and military communications, because of its multicast/broadcast capabilities, mobility, reliability, and global reach. High Throughput Satellites) are expected to revolutionize the field during this decade, providing very high speed, yet cost-effective, Internet access and connectivity anywhere in the world, in rural areas, in the air, and at sea. M2M connectivity, enabled by satellite communications, connects trucks on transcontinental trips, aircraft in real-time-telemetry aggregation, and mercantile ships. A comprehensive analysis of the new advances in satellite communications, Innovations in Satellite Communications Technology is a reference for telecommunications and satellite providers and end-users, technology investors, logistic professionals, and more.

**5G and Satellite Spectrum, Standards, and Scale** Geoff Varrall, 2018-05-31 This new resource presents the emerging role of Low Earth Orbit (LEO), Medium Earth Orbit (MEO), and Geostationary satellites (GSO) as a delivery option for backhaul and wide area rural and urban mobile broadband and fixed access. The book offers insight into recently established Non Terrestrial Network standards. Readers learn which bands will need to be supported in next generation 5G and satellite devices and networks and how the bands will be characterized. Channel spacing, guard bands, FDD or TDD, out of band emission limits, and in band performance requirements are discussed. The book discusses what interference issues will arise from new band allocations including co-shared allocations and how interference will be mitigated in and between next

generation terrestrial and satellite 5G networks. Readers learn how modulation choices will affect co-existence issues. The book discusses the design, performance, cost, and test implications of integrating next generation satellite physical and MAC layers with Release 16 and 17 5G standards and explores how these emerging spectrum and standards map on to IOT and MTC use cases in specific vertical markets. Readers learn how new active and passive antennas in the K bands and V and W band (E band) impact the satellite link budget and satellite delivery cost economics.

*A Transnational Study of Law and Justice on TV* Peter Robson, Jennifer L Schulz, 2016-11-17 This collection examines law and justice on television in different countries around the world. It provides a benchmark for further study of the nature and extent of television coverage of justice in fictional, reality and documentary forms. It does this by drawing on empirical work from a range of scholars in different jurisdictions. Each chapter looks at the raw data of how much justice material viewers were able to access in the multi-channel world of 2014 looking at three phases: apprehension (police), adjudication (lawyers), and disposition (prison/punishment). All of the authors indicate how television developed in their countries. Some have extensive public service channels mixed with private media channels. Financing ranges from advertising to programme sponsorship to licensing arrangements. A few countries have mixtures of these. Each author also examines how TV justice has developed in their own particular jurisdiction. Readers will find interesting variations and thought-provoking similarities. There are a lot of television shows focussed on legal themes that are imported around the world. The authors analyse these as well. This book is a must-read for anyone

interested in law, popular culture, TV, or justice and provides an important addition to the literature due to its grounding in empirical data.

**Media Product Portfolios** Robert G. Picard, 2014-04-08 Media product portfolios are rapidly becoming the predominant shared characteristic of media companies worldwide. The phenomenon involves firms from all kinds of media--newspapers, magazines, television, radio, cinema--and is found in enterprises ranging from small, local firms to large, globalized companies. This volume is the result of a coordinated effort of scholars in the United States and Europe to explore the characteristics, processes, challenges, and implications of media product portfolios. This book breaks new ground by introducing the concepts of product portfolio management and applying them to media companies in a comprehensive manner. It draws from knowledge and methods of analyzing product portfolio management in other industries, applies that knowledge to media industries, and analyzes current practices in media firms. The process and issues of portfolio strategy, development, and management are complex and wide ranging. The book explores the development of media product portfolios from an interdisciplinary perspective, providing insight from business, economic, organizational, and communication approaches. The book explores why and how firms develop portfolios, how company strategy and organizational development relate to portfolios, the role of leaders in developing portfolio activities, economic and geographic issues in portfolios,

production issues, challenges in managing multiple products and operations, issues of marketing and branding issues in portfolios, personnel implications, and the unique challenges in the internationalization of media portfolio operations.

**Middleware Solutions for Wireless Internet of Things** Paolo Bellavista, Carlo Giannelli, Sajal K. Das, Jiannong Cao, 2019-07-15 The proliferation of powerful but cheap devices, together with the availability of a plethora of wireless technologies, has pushed for the spread of the Wireless Internet of Things (WIoT), which is typically much more heterogeneous, dynamic, and general-purpose if compared with the traditional IoT. The WIoT is characterized by the dynamic interaction of traditional infrastructure-side devices, e.g., sensors and actuators, provided by municipalities in Smart City infrastructures, and other portable and more opportunistic ones, such as mobile smartphones, opportunistically integrated to dynamically extend and enhance the WIoT environment. A key enabler of this vision is the advancement of software and middleware technologies in various mobile-related sectors, ranging from the effective synergic management of wireless communications to mobility/adaptivity support in operating systems and differentiated integration and management of devices with heterogeneous capabilities in middleware, from horizontal support to crowdsourcing in different application domains to dynamic offloading to cloud resources, only to mention a few. The book presents state-of-the-art contributions in the articulated WIoT area by providing novel insights about the development and adoption of middleware solutions to enable the WIoT vision in a wide spectrum of heterogeneous scenarios, ranging from industrial environments to educational devices. The presented solutions provide readers with differentiated point of views, by demonstrating how the WIoT vision can be applied to several aspects of our daily life in a pervasive manner.

**Civil-Military Entanglements** Birgitte Refslund Sørensen, Eyal Ben-Ari, 2019-07-16 Military-civilian encounters are multiple and diverse in our times. Contributors to this volume demonstrate how military and civilian domains are constituted through entanglements undermining the classic civil-military binary and manifest themselves in unexpected places and manners. Moreover, the essays trace out the ripples, reverberations and resonations of civil-military entanglements in areas not usually associated with such ties, but which are nevertheless real and significant for an understanding of the roles war, violence and the military play in shaping contemporary societies and the everyday life of its citizens.
