Ecologies of Internet Video John

Hondros, 2018-05-24 This book explores the complex, dynamic, and contested webs of relationships in which three different groups of video makers found

themselves when distributing their work on the Internet. It draws upon both the Deleuzian notion of assemblage and Actor-Network Theory, which together provide a rich conceptual framework for characterizing and analysing these webs. The groups examined are a UK video activist project, a community of film and television fans originating in the US, and an association of US community television producers. Rather than taking YouTube as its point of departure, this book centres on the groups themselves, contextualizing their contemporary distribution practices within their pre-Internet histories. It then follows the groups as they drew upon various Internet technologies beyond YouTube to create their often-complex video distribution assemblages, a process that entangled them in these webs of relationships. Through the analysis of detailed ethnographic fieldwork conducted across a period of several years, this book demonstrates that while the groups found some success in achieving their various goals as video makers, their situations were often problematic and their agency limited, with their practices contested by both human and technological actors within their distribution assemblages.

Socio-Technical Networks Fei Hu, Ali

Mostashari, Jiang Xie, 2010-11-17 While there are sporadic journal articles on socio-technical networks, there's long been a need for an integrated resource that addresses concrete socio-technical network (STN) design issues from algorithmic and engineering perspectives. Filling this need, *Socio-Technical Networks: Science and Engineering Design* provides a complete introduction to the fundamentals of one of the hottest research areas across the social sciences, networking, and computer science—including its definition, historical background, and models. Covering basic STN architecture from a physical/technological perspective, the book considers the system design process in a typical STN, including inputs, processes/actions, and outputs/products. It covers current applications, including transportation networks, energy systems, tele-healthcare, financial networks, and the World Wide Web. A group of STN expert contributors addresses privacy and security topics in the interdependent context of critical infrastructure, which include risk models, trust models, and privacy preserving schemes. Covers the physical and technological designs in a typical STN Considers STN applications in popular fields, such as healthcare and the virtual community Details a method for mapping and measuring complexity, uncertainty, and interactions among STN components The book examines the most important STN models, including graph theory, inferring agent dynamics, decision theory, and information mining. It also

Advanced Intelligent Computing Theories and Applications: With Aspects of Artificial

Intelligence De-Shuang Huang,Xiang Zhang,Carlos Alberto Reyes Garcia,Lei Zhang,2010-08-15 The International Conference on Intelligent Computing (ICIC) was formed to provide an annual forum dedicated to the emerging and challenging topics in artificial intelligence, machine learning, pattern recognition, image processing, bioinformatics, and computational biology. It aims to bring together researchers and practitioners from both academia and industry to share ideas, problems, and solutions related to the multifaceted aspects of intelligent computing. ICIC 2010, held in Changsha, China, August 18–21, 2010, constituted the 6th International Conference on Intelligent Computing. It built upon the success of ICIC 2009, ICIC 2008, ICIC 2007, ICIC 2006, and ICIC 2005, that were held in Ulsan, Korea, Shanghai, Qingdao, Kunming, and Hefei, China, respectively. This year, the conference concentrated mainly on the theories and methodologies as well as the emerging applications of intelligent computing. Its aim was to unify the picture of contemporary intelligent computing techniques as an integral concept that highlights the trends in advanced computational intelligence and bridges theoretical research with

applications. Therefore, the theme for this conference was “Advanced Intelligent Computing Technology and Applications.” Papers focusing on this theme were solicited, addressing theories, methodologies, and applications in science and technology.

Consuming Cultural Hegemony Harisur

Rahman, 2019-11-22 This book examines the circulation and viewership of Bollywood films and filmi modernity in Bangladesh. The writer poses a number of fundamental questions: what it means to be a Bangladeshi in South Asia, what it means to be a Bangladeshi fan of Hindi film, and how popular film reflects power relations in South Asia. The writer argues that partition has resulted in India holding hegemonic power over all of South Asia's nation-states at the political, economic, and military levels—a situation that has made possible its cultural hegemony. The book draws on relevant literature from anthropology, sociology, film, media, communication, and cultural studies to explore the concepts of hegemony, circulation, viewership, cultural taste, and South Asian cultural history and politics.

Advances in Information Technology Borworn

Papasratorn, Wichian Chutimaskul, Kriengkrai Porkaew, Vajirasak Vanijja, 2009-11-06 At the School of Information Technology, KMUTT, we believe that information technology is the most important driver of economy and social development. IT can enable better productivity, as well as helping us to save resources. IT is giving rise to a new round of industrial and business revolution. We now can have products and services that once were believed to be beyond reach. Without IT, it is impossible

for people to realize their full potential. Businesses worldwide are harnessing the power of broadband communication, which will have a profound and constructive impact on the economic, social development, education, and almost all aspects of our life. This new era of unified communication presents us with new challenges. This is why we should work together more closely to enhance the exchange of knowledge related to effective application of broadband communication and IT. It is my sincere hope that all contributions to the Third International Conference on Advances in Information Technology (IAIT 2009) will increase our understanding of how we can have effectively apply this emerging technology for the benefit of all people all around the world. I hope IAIT 2009 will also lead to more research that can contribute to a better methodology for IT applications in the era of unified communication. I am very grateful to all our keynotes speakers for coming all the way to Thailand.

Media Primitivism Delinda Collier, 2020-09-18 In *Media Primitivism* Delinda Collier provides a sweeping new understanding of technological media in African art, rethinking the assumptions that have conceptualized African art as unmediated, primary, and natural. Collier responds to these preoccupations by exploring African artworks that challenge these narratives. From one of the first works of electronic music, Halim El-Dabh's *Ta'abir Al-Zaar* (1944), and Souleymane Cissé's 1987 film, *Yeelen*, to contemporary digital art, Collier argues that African media must be understood in relation to other modes of transfer and transmutation that have significant colonial and postcolonial histories, such as extractive mining and electricity. Collier reorients modern African art within a larger constellation of philosophies of aesthetics and technology, demonstrating how pivotal artworks transcend the distinctions between the constructed and the elemental, thereby expanding ideas about mediation and about what African art can do.
