**Free Energy** Lexa Gibson,2020 Trish Adams never imagined her new job at Audlin Motors would alter her life trajectory so profoundly. It was there she met, fellow design engineer, Solomon Voss. He, quite incidentally, invents a technology that could potentially change the course of human history. An invention that gets the unwanted attention of corporations that stand to lose billions if Solomon's invention were to be revealed to the world. The unscrupulous oil giant - Glaxon - is the first of the corporations to put measures in place to steal Solomon's technology. To hide it away in a secret underground warehouse, where it will only gather dust, never to see the light of day. But is that enough? Trish teams up with Roberta Voss, Solomon's sister, as they are embroiled in a high stakes game of cat and mouse as attempts are made to erase the invention, and eventually the inventor, from existence.

*Eddy Structure Identification in Free Turbulent Shear Flows* J.P. Bonnet,M.N. Glauser,2012-12-06 The existence and crucial role played by large-scale, organized motions in turbulent flows are now recognized by industrial, applied and fundamental researchers alike. It has become increasingly evident that coherent structures influence mixing, noise, vibration, heat transfer, drag, etc... The acceleration of the development of both experimental and computational programs devoted to this topic has been evident at several recent international meetings. One of the first questions which experimentalists or numerical analysts are faced with is: how can these structures be separated from the background turbulence? This is a nontrivial task because the coherent structures are generally embedded in a random field and the technique used to determine when and where certain structures are passing, or their averaged characteristics (in the more probable or dominant role sense) is directly related to the definition of the coherent structure. Several methods or approaches are available and the choice of a particular one is generally dependent on the desired information. This choice depends not only on the definition of the structure, but also on the experimental and numerical capabilities available to the researcher.
