Consuming Music Together Kenton O'Hara, Barry Brown, 2006-07-09 Listening to, buying and sharing music is an immensely important part of everyday life. Yet recent technological developments are increasingly changing how we use and consume music. This book collects together the most recent studies of music consumption, and new developments in music technology. It combines the perspectives of both social scientists and technology designers, uncovering how new music technologies are actually being used, along with discussions of new music technologies still in development. With a specific focus on the social nature of music, the book breaks new ground in bringing together discussions of both the social and technological aspects of music use. Chapters cover topics such as the use of the iPod, music technologies which encourage social interaction in public places, and music sharing on the internet. A valuable collection for anyone concerned with the future of music technology, this book will be of particular interest to those designing new music technologies, those working in the music industry, along with students of music and new technology.

The Impact of Music on Human Development and Well-Being Michele Biasutti, Graham F. Welch, Jennifer MacRitchie, Gary E. McPherson, Evangelos Himonides, 2020-07-17 Music is one of the most universal ways of expression and communication in human life and is present in the everyday lives of people of all ages and from all cultures around the world. Music represents an enjoyable activity in and of itself, but its influence goes beyond simple amusement. Listening to music, singing, playing, composing and improvising, individually and collectively, are common activities for many people: these activities not only allow the expression of personal inner states and feelings, but also can bring many positive effects to those who engage in them. There is an increasing wealth of literature concerning the wider benefits of musical activity, and research in the sciences associated with music suggests that there are many dimensions of human life (physical, social, psychological—including cognitive and emotional) which can be affected positively by music. The impact that musical activity has on human life can be found in different processes, including a transfer of learning from the musical to another cognitive domain. Abilities that have been developed through music education and training may also be effectively applied in other cognitive tasks. Engagement in successful music activity may also have a positive impact on social skills and social inclusion, thus supporting the participation of the individual in collective and collaborative musical events. The promotion of social participation through music can foster many kinds of inclusion, including intercultural, intergenerational, and support for those who are differently abled. The aim of this Research Topic is to present a diverse range of original articles that investigate and discuss, in different ways, the crucial role that musical activity can play in human development and well-being.

Virtual Music Shara Rambarran, 2021-04-08 Virtuality has entered our lives making anything we desire possible. We are, as Gorillaz once sang, in an exciting age where 'the digital won't let [us] go...' Technology has revolutionized music, especially in the 21st century where the traditional rules and conventions of music creation, consumption, distribution, promotion, and performance have been erased and substituted with unthinkable and exciting methods in which absolutely anyone can explore, enjoy, and participate in creating and listening to music. Virtual Music explores the interactive relationship of sound, music, and image, and its users (creators/musicians/performers/audience/consumers). Areas involving the historical, technological, and creative practices of virtual music are surveyed including its connection with creators, musicians, performers, audience, and consumers. Shara Rambarran looks

medicinal chemists realize that there is a strong relationship between pharmacodynamic (what the drug does to the organism) and pharmacokinetic (what the organism does to the drug) effects. A significant contributing factor to the evolution in drug discovery was the methodological and technological revolution with the advent of combinatorial chemistry, high-throughput screening and profiling, and in silico prediction of target-based activity and ADMET (absorption, distribution, metabolism, excretion and toxicity) properties. High-throughput screening and in silico methods have accelerated the process towards drugability of new chemical structures. Another component of the revolution in drug discovery is the replacement of the disease (indication)-based approach by a target-based approach. A better understanding of pathophysiology of diseases and the underlying biological processes of diseases combined with explosive development of genomics and proteomics have been instrumental in the birth of this new paradigm. This volume summarizes discussions of these three aspects of modern drug discovery, i.e. priority for targets, early ADMET assessment, and in silico screening. We trust that readers from academia as well as from industry will benefit from these studies.

Music Technology and Education Andrew Brown, 2014-12-05 Music Technology in Education lays out the principles of music technology and how they can be used to enhance musical teaching and learning in primary and secondary education. Previously published as Computers in Music Education, this second edition has been streamlined to focus on the needs of today's music education student. It has been completely updated to reflect mobile technologies, social networks, rich media environments, and other technological advances. Topics include: Basic audio concepts and recording techniques Enhanced music instruction with interactive systems, web-based media platforms, social networking, and musicianship software Administration and management of technology resources Distance education and flexible learning Music Technology in Education provides a strong theoretical and philosophical framework for examining the use of technology in music education while outlining the tools and techniques for implementation in the classroom. Reflective Questions, Teaching Tips, and Suggested Tasks link technology with effective teaching practice. The companion website provides resources for deeper investigation into the topics covered in each chapter, and includes an annotated bibliography, website links, tutorials, and model projects.
