Virtual Music Shara Rambarran,2021-04-08 Virtuality has entered our lives making anything we desire possible. We are, as Gorillaz once sang, in an exciting age where 'the digital won't let [us] go...' Technology has revolutionized music, especially in the 21st century where the traditional rules and conventions of music creation, consumption, distribution, promotion, and performance have been erased and substituted with unthinkable and exciting methods in which absolutely anyone can explore, enjoy, and participate in creating and listening to music. Virtual Music explores the interactive relationship of sound, music, and image, and its users (creators/musicians/performers/audience/consumers). Areas involving the historical, technological, and creative practices of virtual music are surveyed including its connection with creators, musicians, performers, audience, and consumers. Shara Rambarran looks at the fascination and innovations surrounding virtual music, and illustrates key artists (such as Grace Jones, The Weeknd), creators (such as King Tubby, Kraftwerk, MadVillain, Danger Mouse), audiovisuals in video games and performances (such as Cuphead and Gorillaz), audiences, and consumers that contribute in making this musical experience a phenomenon. Whether it is interrogating the (un)realness of performers, modified identities of artists, technological manipulation of the Internet, music industry and music production, or accessible opportunities in creativity, the book offers a fresh understanding of virtual music and appeals to readers who have an interest in this digital revolution.

Virtual Blue R. J. Sullivan,2013-08 Did you ever wish you could escape to a virtual world? What if you could...but then couldn't get out? Two years after her deadly clash with a vengeful ghost, Fiona Blue Shaefer still can't shake off the trauma of that night. Moving to New York with her father didn't help. Neither did absorbing herself in her college classes. Not even her poetry provided the solace it once did. She convinces herself that ending her relationship with Eugene Chip Farren, her long-distance boyfriend and final tie to the horrors of that night, might bring the closure she needs. Blue travels to Bloomington to break the news to Chip in person, but her timing couldn't be any worse. The Sisters of Baalina, vengeful cultists who practice a new form of techno-magic, have targeted Chip's multi-player videogame as the perfect environment to cast a dangerous spell to free a demoness from the very pits of hell. In the process, their plan may trap Blue in a prison of the mind with no locks, no bars, and no escape.

Virtual Fire Mendy Sobol,2019-07 May 1970. Vietnam. Cambodia. Kent State. Jackson State. Violent protests erupt on college campuses across America. Paul Tesla Simmons and his best friend Toby Jessup are college seniors who spend their time writing programs on Wellston University's IBM 650 mainframe computer, playing pinball in the back room of the Beef 'n' Bun restaurant, and dreaming. President Nixon's escalation of the war and their friendship with student activist Meg Wells draw Paul and Toby into the antiwar movement and a choice between violent and non-violent protest. As the war and opposition to the war reach their climaxes, Toby, Paul, and Meg become ever more

radicalized, only to have their plans overshadowed by an incident that alters the course of their personal histories forever.Decades later, Paul, a successful programmer in an era transformed by the rise of the computer, makes a revolutionary technological discovery. Realizing he now has the means to change a tragic, yet seemingly minor historical event, Paul acts, and unwittingly sets history on a deadly new course. Living in the world his actions created, a world where computers are the province of a select few, seeing life as it was only in his dreams, can Paul, with the help of the brilliant young hacker Melora Kennedy, return history to its proper path and restore the dreams of his youth?From New England's ivy-covered college halls, to New Jersey's crumbling cities, to the beaches of Florida's Gulf coast and the ruins of post-war Vietnam, VIRTUAL FIRE's four narrators relate their experiences of war, resistance to war, the power of friendship and the power of dreams.Author's Note: VIRTUAL FIRE contains scenes concerning warfare, post-traumatic stress disorder related to the Vietnam War, violent acts committed by and against antiwar protesters, and explicit language. It includes a compendium of links to books, movies, and music for those who want to learn more about the Vietnam War and the anti-war movement.

   Narrative Intelligence Michael Mateas,Phoebe Sengers,2003-02-27 Narrative Intelligence (NI) — the confluence of narrative, Artificial Intelligence, and media studies — studies, models, and supports the human use of narrative to understand the world. This volume brings together established work and founding documents in Narrative Intelligence to form a common reference point for NI researchers, providing perspectives from computational linguistics, agent research, psychology, ethology, art, and media theory. It describes artificial agents with narratively structured behavior, agents that take part in stories and tours, systems that automatically generate stories, dramas, and documentaries, and systems that support people telling their own stories. It looks at how people use stories, the features of narrative that play a role in how people understand the world, and how human narrative ability may have evolved. It addresses meta-issues in NI: the history of the field, the stories AI researchers tell about their research, and the effects those stories have on the things they discover. (Series B)

Mundo virtual Esteban Ierardo,2020-05-15 Vivimos en un mundo virtual en el que cada vez le damos más realidad a lo que existe en el ciberespacio, cada vez volcamos más atención y energía mental, e incluso afectiva, a lo que transcurre on line. Como en toda época de la historia, esta era

exuda ambigüedad: desarrollos maravillosos para la humanidad se combinan con nuevas armas para la construcción de un sistema de dominación cada vez más eficiente. En el mundo virtual los algoritmos regulan casi todo. Los individuos somos datos, expuestos a nuevas ciberadicciones: la nomofobia, el miedo a salir de casa sin celular; el phubbing, ignorar a los otros en una reunión al refugiarnos en nuestros dispositivos móviles; o la tendencia a mostrarnos, ya no desde nuestro yo real, sino desde perfiles virtuales en las redes sociales. ¿Podemos celebrar una humanidad futura que escape de la realidad, sus cielos y mares, el espacio, la historia y sus conflictos, en la cual cada uno viva en su propio mundo virtual, con la promesa de que nos sentiremos más satisfechos allí que en el incompleto mundo real? En este libro, el análisis de cada uno de los seis capítulos de la cuarta temporada de Black Mirror ––abundante en visiones posapocalípticas y distópicas en las que el futuro se convierte en el punto crítico de una gran destrucción––, no está destinado únicamente a fans embelesados por idolatrar un producto de entretenimiento. Al verla como una ficción extendida, el autor busca extremar sus potenciales significados y conexiones con algunos de los grandes procesos culturales globales de la era virtual.

<u>Online a Lot of the Time</u> Ken Hillis,2009-05-27 A wedding ceremony in a Web-based virtual world. Online memorials commemorating the dead. A coffee klatch attended by persons thousands of miles apart via webcams. These are just a few of the ritual practices that have developed and are emerging in online settings. Such Web-based rituals depend on the merging of two modes of communication often held distinct by scholars: the use of a device or mechanism to transmit messages between people across space, and a ritual gathering of people in the same place for the performance of activities intended to generate, maintain, repair, and renew social relations. In Online a Lot of the

Time, Ken Hillis explores the stakes when rituals that would formerly have required participants to gather in one physical space are reformulated for the Web. In so doing, he develops a theory of how ritual, fetish, and signification translate to online environments and offer new forms of visual and spatial interaction. The online environments Hillis examines reflect the dynamic contradictions at the core of identity and the ways these contradictions get signified. Hillis analyzes forms of ritual and fetishism made possible through second-generation virtual environments such as Second Life and the popular practice of using webcams to "lifecast" one's life online twenty-four hours a day, seven days a week. Discussing how people create and identify with their electronic avatars, he shows how the customs of virtual-world chat reinforce modern consumer-based subjectivities, allowing individuals to both identify with and distance themselves from their characters. His consideration of web-cam cultures links the ritual of exposing one's life online to a politics of visibility. Hillis argues that these new "rituals of transmission" are compelling because they provide a seemingly material trace of the actual person on the other side of the interface.
