Viral Economies Natalie Porter,2019-09-23 Over the last decade, infectious disease outbreaks have heightened fears of a catastrophic pandemic passing from animals to humans. From Ebola and bird flu to swine flu and MERS, zoonotic viruses are killing animals and wreaking havoc on the people living near them. Given this clear correlation between animals and viral infection, why are animals largely invisible in social science accounts of pandemics, and why do they remain marginal in critiques of global public health? In *Viral Economies*, Natalie Porter draws from long-term research on bird flu in Vietnam to chart the pathways of scientists, NGO workers, state veterinarians, and poultry farmers as they define and address pandemic risks. Porter argues that as global health programs expand their purview to include life and livestock, they weigh the interests of public health against those of commercial agriculture, rural tradition, and scientific innovation. Porter challenges human-centered analyses of pandemics and shows how dynamic and often dangerous human-animal relations take on global significance as poultry and their pathogens travel through global livestock economies and transnational health networks. *Viral Economies* urges readers to think critically about the ideas, relationships, and practices that produce our everyday commodities, and that shape how we determine the value of life—both human and nonhuman.

Plant Viruses: Evolution and Management Rajarshi Kumar Gaur,Nikolay Manchev Petrov,Basavaprabhu L. Patil,Mariya Ivanova Stoyanova,2016-08-29 This book focuses on the evolution of plant viruses, their molecular classification, epidemics and management, covering topics relating to evolutionary mechanisms, viral ecology and emergence, appropriate analysis methods, and the role of evolution in taxonomy. The currently emerging virus species are increasingly becoming a threat to our way of life, both economically and physically. Plant viruses are particularly significant as they affect our food supply and are capable of rapidly spreading to new plant species. In basic research, plant viruses have become useful models to analyze the molecular biology of plant gene regulation and cell-cell communication. The small size of DNA genome of viruses possesses minimal coding capacity and replicates in the host cell nucleus with the help of host plant cellular machinery. Thus, studying virus cellular processes provides a good basis for explaining DNA replication, transcription, mRNA processing, protein expression and gene silencing in plants. A better understanding of these cellular processes will help us design antiviral strategies for plants. The book provides in-depth information on plant virus gene interactions with hosts, localization and expression and the latest advances in our understanding of plant virus evolution, their responses and crop improvement. Combining characterization of plant viruses and disease management and presenting them together makes it easy to compare all aspects of resistance, tolerance and management strategies. As such, it is a useful resource for molecular biologists and plant virologists alike.

God, Trump, and COVID-19 Stephen E. Strang,2020-05-14 From the best-selling author of *God and Donald Trump*, which was brandished by the president at the World Economic Forum in Davos *How the Pandemic Is Affecting Christians, the World, and America's 2020 Election* This book is a timely follow up to *God, Trump and the 2020 Election* that reveals insider information about China, the virus, and the ever-increasing stakes of the upcoming election. It will answer the question for the Christian believers (and seekers) of where God is in all this? It provides a little known prophecy by the late David Wilkerson about a plague coming that would shut down the government as well as churches and bars, including shaking New York City as it's never been shaken. Wilkerson said this plague would force believers into radical prayer that will spark an awakening--something echoed by Christian leaders and prophets. Just as the economy was booming and Donald Trump was fixing long-term problems and beating back attacks from his opponents, a brand-new virus shakes up everything including the outcome of this election. The author has inside information about what happened in China early in the pandemic and what went wrong. He even documents how Donald Trump has led the nation in this time of crisis. In 2016, God raised up Donald Trump to lead America at a pivotal time. Evangelicals who recognized this backed him more than any other presidential candidate in history. Heading into Election Day 2020, the stakes are even higher, especially with the uncertainty and upheaval caused by COVID-19. This book is really “part two” of *God, Trump and the 2020 Election* which details the fight for the soul of America. Strang believes readers need both books to understand and explain what's at stake. With the shutdown caused by the pandemic, serious anti-Christian trends surfaced, such as some states closing “non-essential” churches but allowing liquor stores to provide curbside service. Or ceasing all elective surgeries except abortion, which is the taking of a life while the purpose in shutting down the economy was to save lives from this dreaded virus. Proceedings of the 4th Borobudur International Symposium on Science and Technology 2022 (BIS-STE 2022) Muji Setiyo,Zulfikar Bagus Pambuko,Chrisna Bagus Edhita Praja,Agus Setiawan,Fitriana Yuliastuti,Lintang Muliawanti,Veni Soraya Dewi,2023-11-08 This is an open access book.Related to the big theme of the SDGs reinforcement at our previous conference, we try to invite all academics and researchers around the world to participate in the 4th Borobudur International Symposium 2022 (4thBIS 2022). As we know, the COVID-19 pandemic and its impact on all the 17 SDGs have demonstrated how what began as a health catastrophe swiftly transformed into a human, socioeconomic and environmental crisis. The 4th BIS brought up “The Innovation Chain: A Contribution to Society and Industry” as the main theme to respond this condition. This conference is expected to support the UN Agenda. Additionally, this conference will also provide avenues for participants to exchange ideas and network with each other as well as domain experts from their fields. Overall, this event is aimed at professionals across all spheres of technology and engineering including the experienced, inexperienced, and students as well. The conference will be held virtually on Wednesday, December 21st, 2022 in Magelang, Central Java, Indonesia.

Unleashing the Ideavirus Seth Godin,Malcolm Gladwell,2001-11-01 The book that sparked a marketing revolution. This is a subversive book. It says that the marketer is

not--and ought not to be--at the center of successful marketing. The customer should be. Are you ready for that? --From the Foreword by Malcolm Gladwell, author of The Tipping Point. Counter to traditional marketing wisdom, which tries to count, measure, and manipulate the spread of information, Seth Godin argues that the information can spread most effectively from customer to customer, rather than from business to customer. Godin calls this powerful customer-to- customer dialogue the ideavirus, and cheerfully eggs marketers on to create an environment where their ideas can replicate and spread. In lively detail, Godin looks at the ways companies such as PayPal, Hotmail, GeoCities, even Volkswagen have successfully launched ideaviruses. He offers a recipe for creating your own ideavirus, identifies the key factors in the successful spread of an ideavirus (powerful sneezers, hives, a clear vector, a smooth, friction-free transmission), and shows how any business, large or small, can use ideavirus marketing to succeed in a world that just doesn't want to hear it anymore from the traditional marketers.

Human Viruses: Diseases, Treatments and Vaccines Shamim I. Ahmad,2021-05-19 This book discusses current evidence on human viruses and provides an extensive coverage of newly emerged viruses and current strategies for treatment. Offering a new perspective in view of the re-emergence of Ebola in African countries and Dengue in India and Pakistan, the contents include chapters on emergence, pathogenicity, epidemiology and vaccine uptake. Human Viruses: Diseases, Treatments and Vaccines: The New Insights discusses a range of viruses from the most common such as Influenza and Hepatitis to Zika, Poliomyelitis and Chikungunya among many others. It is authored by a team of experts on viral disease and will be of immense use to virologists, public health experts and clinicians.

Viral Outbreak Rico Porter,2024-03-17 Brim's Virus: The End of Days is a gripping, post-apocalyptic novel that tells the harrowing story of a brilliant scientist, Dr. Michael Brim, who discovers a virus that turns people into zombies. Driven by his ambition and disillusionment with the scientific community, Dr. Green pursues his obsession with the virus as a means of gaining power and control over society. As the virus spreads and the undead become unstoppable, society crumbles, and humans are forced to fight for survival. The story follows a group of survivors struggling to survive, living in a world that is devoid of law and order. The novel is a page-turner, weaving together adventure, action, and suspenseful plot twists that will leave readers on the edge of their seats. Full of heart-pumping action, it forces the reader to confront the question of humanity's survival in a world gone mad.

Outsmarting the Next Pandemic Elizabeth Anne Kirley,Deborah Porter,2021-12-30 This book examines the role of law and policy in addressing the public health crisis of COVID-19 and offers reforms that could improve pandemic preparedness for future outbreaks. Focusing on a number of countries most expected to provide agility and organization in their crisis response - the United States, Canada, Australia, the United Kingdom and Taiwan - the book shows how failures in leadership from governments, executives, and institutions created a vacuum that was quickly filled by naysayers, conspiracy theorists, vaccine hucksters, and fake news generators. Through the key themes of healthcare, leadership, security, and education, the chapters address critical questions: Why have masks become such a polarizing force? How do you self-isolate if you don't have a home? How should equitable triage models for overwhelmed frontline healthcare workers be developed? Can we utilize artificial intelligence to educate the public about manipulated information they access concerning the pandemic? The book was written during the pandemic and weaves in to each chapter vignettes with personal revelations from a broad range of countries, including some also grappling with poverty, war, natural disasters, or revolution. It will appeal to academics, professionals, and policymakers interested in how law and health policy can converge on solutions for global infectious disease. It is suitable for use in upper-level courses.

Comprehensive Virology Heinz Fraenkel-Conrat,2012-12-06 The time seems ripe for a critical compendium of that segment of the biological universe we call viruses. Virology, as a science, having passed only recently through its descriptive phase of naming and num bering, has probably reached that stage at which relatively few new truly new-viruses will be discovered. Triggered by the intellectual probes and techniques of molecular biology, genetics, biochemical cytology, and high resolution microscopy and spectroscopy, the field has experienced a genuine information explosion. Few serious attempts have been made to chronicle these events. This comprehensive series, which will comprise some 6000 pages in a total of about 18 volumes, represents a commitment by a large group of active investigators to analyze, digest, and expostulate on the great mass of data relating to viruses, much of which is now amorphous and disjointed, and scattered throughout a wide literature. In this way, we hope to place the entire field in perspective, and to develop an invalua ble reference and sourcebook for researchers and students at all levels. This series is designed as a continuum that can be entered anywhere, but which also provides a logical progression of developing facts and integrated concepts.

Genetics of Influenza Viruses P. Palese,D.W. Kingsbury,2012-12-06 With the advent of genetic engineering methods and improved biochemical tech niques, much has been learned about the replication of influenza viruses, their structure and their epidemiology. It appears that the time is ripe to review these efforts and to provide a molecular perspective of influenza virology. It is hoped that this book will stimulate our thinking, help us in designing new experiments, and possibly show avenues leading to the control of the diseases associated with influenza viruses.
