Visual Impairments National Research Council, Division of Behavioral and Social Sciences and Education, Board on Behavioral, Cognitive, and Sensory Sciences, Committee on Disability Determination for Individuals with Visual Impairments, 2002-08-17 When children and adults apply for disability benefits and claim that a visual impairment has limited their ability to function, the U.S. Social Security Administration (SSA) is required to determine their eligibility. To ensure that these determinations are made fairly and consistently, SSA has developed criteria for eligibility and a process for assessing each claimant against the criteria. *Visual Impairments: Determining Eligibility for Social Security Benefits* examines SSA's methods of determining disability for people with visual impairments, recommends changes that could be made now to improve the process and the outcomes, and identifies research needed to develop improved methods for the future. The report assesses tests of visual function, including visual acuity and visual fields whether visual impairments could be measured directly through visual task performance or other means of assessing disability. These other means include job analysis databases, which include information on the importance of vision to job tasks or skills, and measures of health-related quality of life, which take a person-centered approach to assessing visual function testing of infants and children, which differs in important ways from standard adult tests.

The Eye Exam Gary S. Schwartz, 2006 *The Ophthalmic Exam: An Introduction to Techniques and Instrumentation for Evaluation* is an excellent reference for everyone new to the eye clinic. With a primary focus on developing history and exam skills, this handy reference delivers the fundamentals on a range of physical exam topics including refraction, retina exam, and alignment. Written in an easy and practical format, *The Ophthalmic Exam* presents the proper way to perform a history and physical examination on an eye patient. The opening chapter will educate the reader on how to perform an eye history on adults and children. Also included are chapters on the foundation of basic optics and how to perform a proper distance and near refraction exams. The book concludes by teaching the reader how to perform various examination techniques and how to record the findings. Dr Gary Schwartz includes only the essential information about ophthalmic examinations, so as to not bog down the reader with in-depth information about diseases. Important concepts are reinforced by including a helpful question and answer section at the end of most chapters. *The Ophthalmic Exam* is perfect for the eye clinic novice wanting to learn the basics and increase their familiarity with performing routine eye exams, as well as the experienced physician looking to fine tune their skills. Physical Exam topics include: Subjective and Objective Refraction, Near Refraction, Color vision, Pupil exam, Motilities, Alignment, Slit lamp examination, Intraocular pressure, determination, Gonioscopy and Retina examination.

New Methods of Sensory Visual Testing Michael Wall, Alfredo A. Sadun, 2012-12-06

Measurement of visual acuity has been the cornerstone of visual testing since Snellen began quantitating visual acuity using letter optotypes in the 1860s. Bjerrum in the 1880s brought sophistication and quantitation to the assessment of the visual field with tangent screen examination using differently sized and colored targets. Further advances in visual testing did not occur until the Goldmann perimeter and the Farnsworth Munsell 100 Hue test were introduced in the 1940s, permitting further refinement in the detection and quantitation of acquired visual loss. An explosion of interest in sensory visual function testing followed the demonstration by Quigley and his colleagues in 1982 that despite the loss of more than 40% of the axons in the optic nerve, Snellen acuity and kinetic perimetry remained normal. Much of this interest has focused on a search for more sensitive and disease-specific sensory visual tests. Previously, novel tests used to probe visual function remained in the province of the visual physiologist and psychophysicist. These tests are now

being introduced by the ophthalmologist into clinical practice. Concomitantly, the mass production of microcomputers and other technical advances have made tests such as automated perimetry and visual evoked response testing affordable for most offices. The clinician is presently being inundated with a plethora of visual function tests that may require a knowledge of visual psychophysics and statistics to understand and interpret. The purpose of this book is to acquaint the clinician with these new tests so that they may be used to maximum benefit.

Use of Visual Displays in Research and Testing Matthew T. McCrudden,Gregory Schraw,Chad Buckendahl,2015-05-01 Visual displays play a crucial role in knowledge generation and communication. The purpose of the volume is to provide researchers with a framework that helps them use visual displays to organize and interpret data; and to communicate their findings in a comprehensible way within different research (e.g., quantitative, mixed methods) and testing traditions that improves the presentation and understanding of findings. Further, this book includes contributions from leading scholars in testing and quantitative, qualitative, and mixed methods research, and results reporting. The volume's focal question is: What are the best principles and practices for the use of visual displays in the research and testing process, which broadly includes the analysis, organization, interpretation, and communication of data? The volume is organized into four sections. Section I provides a rationale for this volume; namely, that including visual displays in research and testing can enhance comprehension and processing efficiency. Section II includes addresses theoretical frameworks and universal design principles for visual displays. Section III examines the use of visual displays in quantitative, qualitative, and mixed methods research. Section IV focuses on using visual displays to report testing and assessment data.
