Al Schmitt on Vocal and Instrumental Recording Techniques
Al Schmitt, 2018-07 In Al Schmitt on Vocal and Instrumental Recording Techniques, legendary producer and engineer Al Schmitt takes us into the studio and shares his process of selecting a microphone and shows us how to get the best sounds. Considerations such as song style, instrumentation, and the recording space itself are taken into account when making mic choices and determining the best placement for each. Schmitt demonstrates how to achieve the best sounds for a number of instruments – including drums, bass, piano, guitars (both acoustic and electric), organs, and horns – across many genres of music. Drawing on decades of experience in the studio, Schmitt brings a unique and invaluable perspective to not only making mic choices and their placement, but also the importance of interacting with musicians – taking their vision and preferences into account to create the most comfortable and effective recording experience for all involved. Also featured in Vocal and Instrumental Recording Techniques is an interview of Schmitt conducted by fellow METAlliance producer and engineer Ed Cherney.

Pathophysiology and Surgical Treatment of Unilateral Vocal Fold Paralysis Eiji Yumoto,2015-04-28 All laryngologists, especially general ENT doctors who see patients with paralytic dysphonia, as well as speech pathologists, will benefit from this book's coverage of many basic and clinical aspects of reinnervation in retrieving patients' normal voices. Phonosurgical treatment for paralytic dysphonia was first established in the late 1970s in the form of arytenoid adduction and medialization laryngoplasty. It made possible the improvement of patients' post-op voices, but it was difficult to regain patients' own pre-paralysis voices. It has recently been established that immediate reconstruction of the recurrent laryngeal nerve during tumor extirpation is effective in recovery of their original voices in patients with unilateral vocal fold paralysis (VFP). The activity of the thyroarytenoid muscle is needed to recover normal voices. Nerve-muscle pedicle (NMP) flap implantation with a refined technique to the thyroarytenoid muscle is a novel method for that purpose. NMP flap implantation combined with arytenoid adduction was applied by the author to patients suffering from dysphonia and most patients did recover their nearly normal voices after surgery. This book provides readers with (1) what the currently prevalent surgical procedures are, (2) unsatisfactory results of these conventional procedures, (3) results of immediate recurrent laryngeal nerve reconstruction during tumor extirpation, (4) the outcome of delayed reinnervation combined with arytenoid adduction in patients with VFP and further, (5) the scientific basis that explains the reasons why the author's method is effective in the recovery of patients' own pre-paralysis, normal voices.

Mixing Music Russ Hepworth-Sawyer, Jay Hodgson, 2016-12-01 This series, Perspectives On Music Production, collects detailed and experientially informed considerations of record production from a multitude of perspectives, by authors working in a wide array of academic, creative, and professional contexts. We solicit the perspectives of scholars of every disciplinary stripe, alongside recordists and recording musicians themselves, to provide a fully comprehensive analytic point-of-view on each component stage of record production. Each volume in the series thus focuses directly on a distinct aesthetic moment in a record's production, from pre-production through recording (audio engineering), mixing and mastering to marketing and promotions. This first volume in the series, titled Mixing Music, focuses directly on the mixing process. This book includes: References and citations to existing academic works; contributors draw new conclusions from their personal research, interviews, and experience. Models innovative methodological approaches to studying music production. Helps specify the term record production, especially as it is currently
