Wireless Technology Steven Powell, J.P. Shim, 2009-08-11 Wireless technology and handheld devices are dramatically changing the degrees of interaction throughout the world, further creating a ubiquitous network society. The emergence of advanced wireless telecommunication technologies and devices in today's society has increased accuracy and access rate, all of which are increasingly essential as the volume of information handled by users expands at an accelerated pace. The requirement for mobility leads to increasing pressure for applications and wireless systems to revolve around the concept of continuous communication with anyone, anywhere, and anytime. With the wireless technology and devices come flexibility in network design and quicker deployment time. Over the past decades, numerous wireless telecommunication topics have received increasing attention from industry professionals, academics, and government agencies. Among these topics are the wireless Internet; multimedia; 3G/4G wireless networks and systems; mobile and wireless network security; wireless network modeling, algorithms, and simulation; satellite based systems; 802.11x;

RFID; and broadband wireless access.

Regulating Telecommunications in the EU and China Bernd Holznagel, Junqi Xu, Thomas Hart, 2009 Chinese as well as European regulatory decisions need to consider regional particularities but insist on an implementation system that never loses sight of its goal. In the area of electronic communications policy, this goal is the establishment of a market environment that ensures innovation, high quality and affordable prices. The present survey aims at improving the process of knowledge exchange between European and Chinese experts and decision-makers in Information Society law and policy. The EU-China Information Society Project asked the authors to assess both the EU's and the Chinese status quo, and to bring together both perspectives together in a joint effort to learn from the EU experiences for the Chinese decision-making process today.

Global Business Alliances Refik Culpan, 2002-03-30 Forging business alliances can vitalize corporate strategies. This book is a road map to the concepts and theories underlying successful business alliances in four critical industries: automobile manufacturing, pharmaceuticals, airlines, and telecommunications. Dr. Culpan offers the essentials of global partnering as seen from a strategic

management viewpoint. He examines joint ventures, non-equity alliances, and business options designed to give a competitive edge over other allied firms. New conceptual models help to clarify various strategies and collaborative processes. By comparing the four major industries—and specific companies in each—this study explores not only the uniqueness of its subjects, but also the common grounds of various multinationals. Through key insights and ideas, the possibilities and realities of corporate alliances begin to emerge. Attention is also paid to the decision-making process as it relates cooperative ventures, as well as to the inevitable managerial challenges of forming, and managing, strategic alliances. The result is an astute analysis ideal for teachers, students, and strategists seeking fresh insights into the workings and benefits of corporate alliance.
