Distributed Learning and Virtual Librarianship Sharon G. Almquist,2011-09-12 Brought to you by a team of experienced practitioners in the field, this book examines the vast topic of library support for distributed learning, providing both historical and contemporary viewpoints. What is the best way to deliver research resources to students who live off campus—as in, way off campus, in a rural area without a high-speed Internet connection? And where does one find a complete (and accurate) synopsis of copyright guidelines that will prevent well-intentioned librarians from being labeled as the copyright police? The answers to these two questions regarding distributed learning—and many more—are contained in *Distributed Learning and Virtual Librarianship*. Written by practitioners in their field of expertise, this book documents the history of distributed learning and discusses current issues in distributed learning librarianship, with a special focus on the role of technology. Topics covered include virtual libraries, reference assistance, E-reserves and document delivery, administrative and marketing issues, and

copyright concerns. This text is valuable to librarians working in public, school, and academic libraries.

Biocomputing 2023 - Proceedings Of The Pacific Symposium Russ B Altman, Lawrence Hunter, Marylyn D Ritchie, Tiffany A Murray, Teri E Klein, 2022-11-24 The Pacific Symposium on Biocomputing (PSB) 2023 is an international, multidisciplinary conference for the presentation and discussion of current research in the theory and application of computational methods in problems of biological significance. Presentations are rigorously peer reviewed and are published in an archival proceedings volume. PSB 2023 will be held on January 3-7, 2023 in Kohala Coast, Hawaii. Tutorials and workshops will be offered prior to the start of the conference. PSB 2023 will bring together top researchers from the US, the Asian Pacific nations, and around the world to exchange research results and address open issues in all aspects of computational biology. It is a forum for the presentation of work in databases, algorithms, interfaces, visualization, modeling, and other computational methods, as applied to biological problems, with emphasis on applications in data-rich areas of molecular biology. The PSB has been designed to be responsive to the need for critical mass in sub-disciplines within biocomputing. For that reason, it is the only meeting whose sessions are defined dynamically each year in response to specific proposals. PSB sessions are organized by leaders of research in biocomputing's 'hot topics.' In this way, the meeting provides an early forum for serious examination of emerging methods and approaches in this rapidly changing field.

Situated Learning in Interpreter Education Annette Miner, Brenda Nicodemus, 2021-07-16 This book provides a theoretical and pragmatic guide to the use of situated learning within structured interpreting programs. Proponents of situated learning theory believe that meaningful learning occurs when students interact with others in the social contexts in which they will be working. With such interactions, students have the opportunity to apply their theoretical knowledge to authentic contexts that they will encounter throughout their professional lives. While a limited number of research articles exist about the use of situated learning in interpreter education, this is the first full book to provide the foundations for situated

learning theory, show how to implement situated learning in interpreter education, and offer practical applications for maximizing authenticity in interpreting classrooms.
