47 Easy-to-Do Classic Science Experiments Eugene F. Provenzo, Asterie Baker Provenzo, 2012-07-31 Here is a highly motivating book for grade-school students that will introduce them to many of the world's most popular (and historically significant) scientific experiments. They'll learn about gravity simply by following the acrobatic antics of an ordinary coin. By trying to blow an egg out of a cup, they'll discover the principles of air pressure. Dancing soap bubbles will help them understand the effects of static electricity, and by dropping quarters into a full glass of water without causing it to overflow, they'll study the effects of surface tension. These and over 40 other experiments have been carefully selected by noted educators Eugene and Asterie Baker Provenzo to familiarize children with classic science experiments involving optics, inertia, air pressure, magnetism, sound, topology, light, density, vibration, prisms, elasticity, gases, vacuum, perspective, geometry, centrifugal force, buoyancy, color, and much more. Some experiments, such as the optical Newton's Rings are hundreds of years old. Still others, like the straw lever test, are based on Greek experiments with leverage and the center of gravity — first carried out thousands of years ago. Easy-to-follow instructions and illustrations show youngsters how to perform each experiment, most of which are prefaced with historical background, a list of necessary materials and an explanation of key terms. Almost all experiments can be carried out with common household items (tissue paper, scissors, tapes, rubber balloons, pens, pencils, etc.) and can be worked at home or in the classroom to demonstrate specific scientific principles or to supplement a science-curriculum unit. Sources for all historical illustrations given in the text are listed at the end of the book.

The Archer Paulo Coelho, 2020-11-10 From the #1 best-selling author of *The Alchemist* comes an inspiring story about a young man seeking wisdom from an elder, and the practical lessons imparted along the way. Includes stunning illustrations by Christoph Niemann. "A novelist who writes in a universal language." —The New York Times In *The Archer* we meet Tetsuya, a man once famous for his prodigious gift with a bow and arrow but who has since retired from public life, and the boy who comes searching for him. The boy has many questions, and in answering them Tetsuya illustrates the way of the bow and the tenets of a meaningful life. Paulo Coelho's story suggests that living without a connection between action and soul cannot fulfill, that a life constricted by fear of rejection or failure is not a life worth living. Instead one must take risks, build courage, and embrace the unexpected journey fate has to offer. With the wisdom, generosity, simplicity, and grace that have made him an international best seller, Paulo Coelho provides the framework for a rewarding life: hard work, passion, purpose, thoughtfulness, the willingness to fail, and the urge to make a difference.

The Story of the Selma Voting Rights Marches in Photographs David Aretha, 2014-01-01 The Civil Rights Act of 1964 was a momentous victory for

civil rights activists, but one major obstacle remained in the path toward equal rights for African Americans: the right to vote. In the South, segregationists prevented African Americans from voting. Civil rights leaders believed it was time for strong action and chose Selma, Alabama, as the rallying point. There, the marches and protests captured the nation's attention. Through gripping primary source photographs, author David Aretha explores this important time in American history.

I and Thou Martin Buber, 2012-10-01 I AND THOU is one of the most important books of Western Theology. In it, Martin Buber, heavily influenced by the writings of Nietzsche, unites the proto-Existentialist currents of modern German thought with the Judeo-Christian tradition, powerfully updating faith for modern times. Since its first appearance in Germany in 1923, this slender volume has become one of the epoch-making works of our time. This work is the centerpiece of Buber's philosophy. It lays out a view of the world in which human beings can enter into relationships using their innermost and whole beings to form true partnerships. This is the original English translation, and it was prepared in the author's presence.

Mobile Phones: The New Talking Drums of Everyday Africa Mirjam de Bruijn, Francis B. Nyamnjoh, Inge Brinkman, 2009 'We cannot imagine life now without a mobile phone' is a frequent comment when Africans are asked about mobile phones. They have become part and parcel of the communication landscape in many urban and rural areas of Africa and the growth of mobile telephony is amazing: from 1 in 50 people being users in 2000 to 1 in 3 in 2008. Such growth is impressive but it does not even begin to tell us about the many ways in which mobile phones are being appropriated by Africans and how they are transforming or are being transformed by society in Africa. This volume ventures into such appropriation and mutual shaping. Rich in theoretical innovation and empirical substantiation, it brings together reflections on developments around the mobile phone by scholars of six African countries (Burkina Faso, Cameroon, Ghana, Mali, Sudan and Tanzania) who explore the economic, social and cultural contexts in which the mobile phone is being adopted, adapted and harnessed by mobile Africa.

Internet Architecture and Innovation Barbara Van Schewick, 2012-08-24 A detailed examination of how the underlying technical structure of the Internet affects the economic environment for innovation and the implications for public policy. Today—following housing bubbles, bank collapses, and high unemployment—the Internet remains the most reliable mechanism for fostering innovation and creating new wealth. The Internet's remarkable growth has been fueled by innovation. In this pathbreaking book, Barbara van Schewick argues that this explosion of innovation is not an accident, but a consequence of the Internet's architecture—a consequence of technical choices regarding the Internet's inner structure that were made early in its history. The Internet's original architecture was based on four design principles: modularity, layering, and two versions of the celebrated but often misunderstood end-to-end arguments. But today, the Internet's architecture is changing in ways that deviate from the Internet's original design principles, removing the features that have fostered innovation and threatening the Internet's ability to spur economic growth, to improve democratic discourse, and to provide a decentralized environment for social and cultural interaction in which anyone can participate. If no one intervenes, network providers' interests will drive networks further away from the original design principles. If the Internet's value for society is to be preserved, van Schewick argues, policymakers will have to intervene and protect the features that were at the core of the Internet's success.

Zaichkowsky, 2020-04-01 As those involved in commerce are aware, preventing competitors and others from imitating successful brands is a difficult and costly task. This book serves to inform the reader concerning complexities of the issues of brand imitation, integrating the disciplines of psychology, business, and law to the area of trademark infringement and counterfeiting. Principles and theories from psychology and how they are relevant to consumers' perceptions in the marketplace are used to explain why competitors steal the intellectual property of another company or entity.
