Israel's Exodus in Transdisciplinary Perspective Thomas E. Levy, Thomas Schneider, William H.C. Propp, 2015-03-28 The Bible's grand narrative about Israel's Exodus from Egypt is central to Biblical religion, Jewish, Christian, and Muslim identity and the formation of the academic disciplines studying the ancient Near East. It has also been a pervasive theme in artistic and popular imagination. *Israel's Exodus in Transdisciplinary Perspective* is a pioneering work surveying this tradition in unprecedented breadth, combining archaeological discovery, quantitative methodology and close literary reading. Archaeologists, Egyptologists, Biblical Scholars, Computer Scientists, Geoscientists and other experts contribute their diverse approaches in a novel, transdisciplinary consideration of ancient topography, Egyptian and Near Eastern parallels to the Exodus story, the historicity of the Exodus, the interface of the Exodus question with archaeological fieldwork on emergent Israel, the formation of biblical literature, and the cultural memory of the Exodus in ancient Israel and beyond. This edited volume contains research presented at the groundbreaking symposium *Out of Egypt: Israel's Exodus Between Text and Memory, History and Imagination* held in 2013 at the Qualcomm Institute of the University of California, San Diego. The combination of 44 contributions by an international group of scholars from diverse disciplines makes this the first such transdisciplinary study of ancient text and history. In the original conference and with this new volume, revolutionary media, such as a 3D immersive virtual reality environment, impart innovative, Exodus-based research to a wider audience. Out of archaeology, ancient texts, science and technology emerge an up-to-date picture of the Exodus for the 21st Century and a new standard for collaborative research.

There is no soundtrack Ming-Yuen S. Ma, 2020-06-24 *There is no soundtrack* is a study of how sound and image produce meaning in contemporary experimental media art by artists ranging from Chantal Akerman to Nam June Paik to Tanya Tagaq. It contextualises these works and artists through key ideas in sound studies: voice, noise, listening, the soundscape and more. The book argues that experimental media art produces radical and new audio-visual relationships challenging the visually dominated discourses in art, media and the human sciences. In addition to directly addressing what Jonathan Sterne calls 'visual hegemony', it also explores the lack of diversity within sound studies by focusing on practitioners from transnational and diverse backgrounds. As such, it contributes to a growing interdisciplinary scholarship, building new, more complex and reverberating frameworks to collectively sonify the study of culture.

Distributed, Ambient, and Pervasive Interactions Norbert Streitz, Panos Markopoulos, 2014-05-17 This book constitutes the refereed proceedings of the Second International Conference on Distributed, Ambient, and Pervasive Interactions, DAPI 2014, held as part of the 16th International Conference on Human-Computer Interaction, HCII 2014, held in Heraklion, Crete, Greece in June 2014, jointly with 13 other thematically conferences. The total of 1476 papers and 220 posters presented at the HCII 2014 conferences were carefully reviewed and selected from 4766 submissions. These papers address the latest research and development efforts and highlight the human aspects of design and use of computing systems. The papers accepted for presentation thoroughly cover the entire field of Human-Computer Interaction, addressing major advances in knowledge and effective use of computers in a variety of application areas. The 58 papers included in this volume are organized in topical sections on design frameworks and models for intelligent interactive environments; natural interaction; cognitive, perceptual and emotional issues in ambient intelligence; user experience in intelligent environments; developing distributed, pervasive and intelligent environments; smart cities.

Affective and Emotional Aspects of Human-computer Interaction Maja Pivec, 2006 The learning process can be seen as an emotional and personal experience that is addictive and motivates learners to proactive behavior. Divided in three parts, this title discusses major topics such as: emotions, motivation, games, and game-experience.

Comprehensive Healthcare Simulation: Improving Healthcare Systems Ellen S. Deutsch, Shawna J. Perry, Harshad G. Gurnaney, 2021-07-22 This book presents simulation as an essential, powerful tool to develop the best possible healthcare system for patients. It provides vital insights into the necessary steps for supporting and enhancing medical care through the simulation

methodology. Organized into four sections, the book begins with a discussion on the overarching principles of simulation and systems. Section two then delves into the practical applications of simulation, including developing new workflows, utilizing new technology, building teamwork, and promoting resilience. Following this, section three examines the transition of ideas and initiatives into everyday practices. Chapters in this section analyze complex interpersonal topics such as how healthcare clinical stakeholders, simulationists, and experts who are non-clinicians can collaborate. The closing section explores the potential future directions of healthcare simulation, as well as leadership engagement. A new addition to the Comprehensive Healthcare Simulation Series, *Improving Healthcare Systems* stimulates the critical discussion of new and innovative concepts and reinforces well-established and germane principles.

Voice into Acting Christina Gutekunst, John Gillett, 2014-01-16 How can actors bridge the gap between themselves and the text and action of a script, integrating fully their learned vocal skills? How do we make an imaginary world real, create the life of a role, and fully embody it vocally and physically so that voice and acting become one? Christina Gutekunst and John Gillett unite their depth of experience in voice training and acting to create an integrated and comprehensive approach informed by Stanislavski and his successors – the acting approach widely taught to actors in drama schools throughout the world. The authors create a step-by-step guide to explore how voice can: respond to our thoughts, senses, feelings, imagination and will fully express language in content and form communicate imaginary circumstances and human experience transform to adapt to different roles connect to a variety of audiences and spaces Featuring over fifty illustrations by German artist Dany Heck, *Voice into Acting* is an essential manual for the actor seeking full vocal identity in characterization, and for the voice teacher open to new techniques, or an alternative approach, to harmonize with the actor's process.

Advances in Robotics and Virtual Reality Tauseef Gulrez,Aboul Ella Hassanien,2011-11-13 A

beyond human knowledge and reach, robotics is strongly involved in tackling challenges of new emerging multidisciplinary fields. Together with humans, robots are busy exploring and working on the new generation of ideas and problems whose solution is otherwise impossible to find. The future is near when robots will sense, smell and touch people and their lives. Behind this practical aspect of human-robotics, there is a half a century spanned robotics research, which transformed robotics into a modern science. *The Advances in Robotics and Virtual Reality* is a compilation of emerging application areas of robotics. The book covers robotics role in medicine, space exploration and also explains the role of virtual reality as a non-destructive test bed which constitutes a premise of further advances towards new challenges in robotics. This book, edited by two famous scientists with the support of an outstanding team of fifteen authors, is a well suited reference for robotics researchers and scholars from related disciplines such as computer graphics, virtual simulation, surgery, biomechanics and neuroscience.

The Story of Life Christopher McKeon, 2022-08-01 "Creator, do you have a family?" said my youngest. And he answered! Thus began our healing through awareness with Mina (how we address the human person—God—who built our universe), the archangels, and many others in spirit world. Our explosive conversation over the next 18 hours revealed God, angels, humanity, why we are as we are, and our universe as never before imagined. Spirit mediums Christopher McKeon and his daughters Ayako and El shatter the paradigms and magical thinking handed down to us through history by religion, philosophy, mysticism, and science. Experience, as we did, healing of your trauma, pain, and suffering through gaining awareness of your true reality. Included are ten historical spirit persons who give short testimonies of their experiences to help explain certain aspects of our—your—life reality. You'll never feel the same, or look at the world around you the way you did, as your awareness takes flight from unawareness with new wings on new winds. Be prepared for a story of life like nothing you've ever experienced. Best of all, you'll learn how you, too, can talk to Mina, 'angels,' your spirit family and guides, and willing spirit persons to get your own answers (without having to take ours on faith) as a ground-floor participant in the nascent worldwide energy testing community! For Mina, this book is all about healing your pain and suffering by revealing our personal, and larger, human reality. You'll find it all inside. A chapter summary: Part I is a narrative of our experience discovering energy testing and our shocking meet-up with our 'creator;' Part II describes how you and our universe are infinite and eternal as existence, time, space, and consciousness, including: —an overview regarding our true natural reality: matter, energy, gravity, mass, lightspeed (normal and actual), relativity and the quantum, black holes, the Big Bang, quantum entanglement/tunneling, how the natural universe interacts with the supranatural (spirit) universe; —what is All Existence of which our universe is a part; —all about consciousness (psyche) and how our physical body interacts with our spirit body; —'psyche fundamental force' (Intentionality); —and culture as the individual; Part III describes the origin of humanity and includes: —the birth of humanity; —who and what our creator is —how our universe came to be our home —why human life seems destructive and filled with pain and suffering; Part IV is the real 'woo-woo' of the book and includes: —how we exist and live as physicospirit-embodied individuals; —our mind, conscience, PTSD; —killing, abortion, euthanasia, suicide; —lineage and DNA; —what happens at death; —fate, destiny, and free will; —suffering, hope, depression, reincarnation, and the origin of slavery; —happiness, love and hate; —government and society; —evil; —beauty and ugliness; —spirit world; —the chakras and aura as they really are and what they do; —Intentionality; —who and what 'angels' really are; —history of Earth's humanity and radiometric dating; —our physicospirit self; —religion; —what is healing, how to heal; —human freedom; —astral projection, the Akashic Records; —marriage, sex; —animal familiars; —ten historical spirit persons' testimony: Duke Wen of Zhou, Hitler, Hannibal Gisco, Mio, Mnidho of Nihoa, Tethys, Jesus, Sun-myung Moon, Muhammad, Buddha; Part V teaches you energy testing so you can learn how to talk to Mina (God), 'angels,' your spirit family, spirit guides, and any willing spirit person to get your own answers to life.

Topology-Based Methods in Visualization II Hans-Christian Hege, Konrad Polthier, Gerik Scheuermann, 2009-02-07 Visualization research aims to provide insight into large, complicated data sets and the phenomena behind them. While there are different methods of reaching this goal, topological methods stand out for their solid mathematical foundation, which guides the algorithmic analysis and its presentation. Topology-based methods in visualization have been around since the beginning of visualization as a scientific discipline, but they initially played only a minor role. In recent years, interest in topology-based visualization has grown and significant innovation has led to new concepts and successful applications. The latest trends adapt basic topological concepts to precisely express user interests in topological properties of the data. This book is the outcome of the second workshop on Topological Methods in Visualization, which was held March 4–6, 2007 in Kloster

Nimbschen near Leipzig, Germany. The workshop brought together more than 40 international researchers to present and discuss the state of the art and new trends in the field of topology-based visualization. Two inspiring invited talks by George Haller, MIT, and Nelson Max, LLNL, were accompanied by 14 presentations by participants and two panel discussions on current and future trends in visualization research. This book contains thirteen research papers that have been peer-reviewed in a two-stage review process. In the first phase, submitted papers were peer-reviewed by the international program committee. After the workshop accepted papers went through a revision and a second review process taking into account comments from the first round and discussions at the workshop. About half the papers concern topology-based analysis and visualization of fluid flows simulations; two papers concern more general topological algorithms, while the remaining papers discuss topology-based visualization methods in application areas like biology, medical imaging and electromagnetism.
