Towards Cyberpsychology Giuseppe Riva (Ph.D.),Carlo Galimberti,2001 Drawing on research in the social sciences, communications, and other fields, this book wants to analyze how the online environment is influencing the experience of psychology. However, understanding how the Internet is changing our everyday experience presents a substantial challenge for the psychologists. Now, research in this area is still sparse and limited in both the number and scope of studies: actual research, especially studies with strict methodologies, is only just beginning. The contributions in this book are among the first scientific attempts to take a serious look at various aspects of Internet-related psychology. However, we need not start from scratch. Psychology has a broad knowledge about the factors that affect human behaviour in other setting. So, the papers collected for this book are descriptive and practical-oriented in nature.

Regression Modelling with Spatial and Spatial-Temporal Data Robert P. Haining,Guangquan Li,2020-01-27 Modelling Spatial and Spatial-Temporal Data: A Bayesian Approach is aimed at statisticians and quantitative social, economic and public health students and researchers who work with spatial and spatial-temporal data. It assumes a grounding in statistical theory up to the standard linear regression model. The book compares both hierarchical and spatial econometric modelling, providing both a reference and a teaching text with exercises in each chapter. The book provides a fully Bayesian, self-contained, treatment of the underlying statistical theory, with chapters dedicated to substantive applications. The book includes WinBUGS code and R code and all datasets are available online. Part I covers fundamental issues arising when modelling spatial and spatial-temporal

data. Part II focuses on modelling cross-sectional spatial data and begins by describing exploratory methods that help guide the modelling process. There are then two theoretical chapters on Bayesian models and a chapter of applications. Two chapters follow on spatial econometric modelling, one describing different models, the other substantive applications. Part III discusses modelling spatial-temporal data, first introducing models for time series data. Exploratory methods for detecting different types of space-time interaction are presented followed by two chapters on the theory of space-time separable (without space-time interaction) and inseparable (with space-time interaction) models. An applications chapter includes: the evaluation of a policy intervention; analysing the temporal dynamics of crime hotspots; chronic disease surveillance; and testing for evidence of spatial spillovers in the spread of an infectious disease. A final chapter suggests some future directions and challenges.

Transparency Daniel Jütte,2023-04-25 A wide-ranging illustrated history of transparency as told through the evolution of the glass window Transparency is a mantra of our day. It is key to the Western understanding of a liberal society. We expect transparency from, for instance, political institutions, corporations, and the media. But how did it become such a powerful—and global—idea? From ancient glass to Apple’s corporate headquarters, this book is the first to probe how Western people have experienced, conceptualized, and evaluated transparency. Daniel Jütte argues that the experience of transparency has been inextricably linked to one element of Western architecture: the glass window. Windows are meant to be unnoticed. Yet a historical perspective reveals the role that glass has played in shaping how we see and interpret the world. A seemingly “pure” material, glass has been endowed, throughout history, with political, social, and cultural meaning, in manifold and sometimes conflicting ways. At the same time, Jütte raises questions about the future of vitreous transparency—its costs in terms of visual privacy but also its ecological price tag in an age of accelerating climate change.

Streetcars and the Shifting Geographies of Toronto Brian Doucet,Michael Doucet,2022-03-01 When looking at old pictures of Toronto, it is clear that the city’s urban, economic, and social geography has changed dramatically over the generations. Historic photos of Toronto’s streetcar network offer a unique opportunity to examine how the city has been transformed from a provincial, industrial city into one of North America’s largest and most diverse regions. Streetcars and the Shifting Geographies of Toronto studies the city’s urban transformations through an analysis of photographs taken by streetcar enthusiasts, beginning in the 1960s. These photographers did not intend to record the urban form, function, or social geographies of Toronto; they were accidental archivists whose main goal was to photograph the streetcars themselves. But today, their images render

visible the ordinary, day-to-day life in the city in a way that no others did. These historic photographs show a Toronto before gentrification, globalization, and deindustrialization. Each image has been re-photographed to provide fresh insights into a city that is in a constant state of flux. With gorgeous illustrations, this unique book offers an understanding of how Toronto has changed, and the reasons behind these urban shifts. The visual exploration of historic and contemporary images from different parts of the city helps to explain how the major forces shaping the city affect its form, functions, neighbourhoods, and public spaces.
