The Image of the World Peter Whitfield,1994 Examines the history of world mapmaking through 70 outstanding individual examples, discussing the maps and their makers in relation to their age and placing them within the context of the wider history of ideas.

Theater of the World Thomas Reinertsen Berg,2018-12-04 A beautifully illustrated full-color history of mapmaking across centuries -- a must-read for history buffs and armchair travelers. Theater of the World offers a fascinating history of mapmaking, using the visual representation of the world through time to tell a new story about world history and the men who made it. Thomas Reinertsen Berg takes us all the way from the mysterious symbols of the Stone Age to Google Earth, exploring how the ability to envision what the world looked like developed hand in hand with worldwide exploration. Along the way, we meet visionary geographers and heroic explorers along with other unknown heroes of the map-making world, both ancient and modern. And the stunning visual material allows us to witness the extraordinary breadth of this history with our own eyes.

A History of the World in 12 Maps Jerry Brotton,2014-10-28 A New York Times Bestseller “Maps allow the armchair traveler to roam the world, the diplomat to argue his points, the ruler to administer his country, the warrior to plan his campaigns and the propagandist to boost his cause... rich and beautiful.” – Wall Street Journal Throughout history, maps have been fundamental in shaping our view of the world, and our place in it. But far from being purely scientific objects, maps of the world are unavoidably ideological and subjective, intimately bound up with the systems of power and authority of particular times and places. Mapmakers do not simply represent the world, they construct it out of the ideas of their age. In this scintillating book, Jerry Brotton examines the significance of 12 maps - from the almost mystical representations of ancient history to the satellite-derived imagery of today. He vividly recreates the environments and circumstances in which each of the maps was made, showing how each conveys a highly individual view of the world. Brotton shows how each of his maps both influenced and reflected contemporary events and how, by considering it in all its nuances and omissions, we can better understand the world that produced it. Although the way we map our surroundings is more precise than ever before, Brotton argues that maps today are no more definitive or objective than they have ever been. Readers of this beautifully illustrated and masterfully argued book will never look at a map in quite the same way again. “A fascinating and panoramic new history of the cartographer's art.” – The Guardian “The intellectual background to these images is conveyed with beguiling erudition.... There is nothing more subversive than a map.” – The Spectator “A mesmerizing and beautifully illustrated book.” –The Telegraph

A Map of the World Antonis Antoniou,Robert Klanten,gestalten,Lincoln Dexter,2020 A collection of maps by a new generation of original and sought-after designers, illustrators, and mapmakers. This work showcases specific regions, characterizes local scenes, generates moods, and tells stories beyond sheer navigation--

When Maps Become the World Rasmus Grønfeldt Winther,2020-06-29 Map making and, ultimately, map thinking is ubiquitous across literature, cosmology, mathematics, psychology, and genetics. We partition, summarize, organize, and clarify our world via spatialized representations. Our maps and, more generally, our representations seduce and persuade; they build and destroy. They are the ultimate record of empires and of our evolving

comprehension of our world. This book is about the promises and perils of map thinking. Maps are purpose-driven abstractions, discarding detail to highlight only particular features of a territory. By preserving certain features at the expense of others, they can be used to reinforce a privileged position. When *Maps Become the World* shows us how the scientific theories, models, and concepts we use to intervene in the world function as maps, and explores the consequences of this, both good and bad. We increasingly understand the world around us in terms of models, to the extent that we often take the models for reality. Winther explains how in time, our historical representations in science, in cartography, and in our stories about ourselves replace individual memories and become dominant social narratives—they become reality, and they can remake the world.

World Maps for Finding the Direction and Distance of Mecca David A. King, 1999-01-01 The author describes how Muslims over the centuries have determined the sacred direction (qibla) towards Mecca and presents two highly sophisticated Mecca-centred world-maps for finding the qibla. These recently-discovered world-maps have forced a reevaluation of Muslim achievements in mathematics and cartography.

Maps That Changed The World John O. E. Clark, 2016-02-12 An ancient Chinese proverb suggests, They are wise parents who give their children roots and wings – and a map. *Maps That Changed the World* features some of the world's most famous maps, stretching back to a time when cartography was in its infancy and the 'edge of the world' was a barrier to exploration. The book includes details of how the Lewis and Clark Expedition helped map the American West, and how the British mapped India and Australia. Included are the beautifully engraved Dutch maps of the 16th century; the sinister Utopian maps of the Nazis; the maps that presaged brilliant military campaigns; charted the geology of a nation; and the ones that divided a continent up between its European conquerors. Organised by theme, the book shows the evolution of map-making from all corners of the globe, from ancient clay maps, to cartographic breakthroughs such as Harry Beck's map of the London underground. There are also famous fictional maps, including the maps of the lost continent of Atlantis and Tolkien's Middle Earth. With an introduction written by acclaimed cartographic historian Jeremy Black.

Metro Maps of the World Mark Ovenden, London Transport Museum, 2005

Mapping the World Ralph E. Ehrenberg, 2006 This book highlights more than a hundred maps from every era and every part of the world. Organized chronologically, they display an astonishing variety of cartographic styles and techniques. They range from priceless artistic masterworks like the 1507 Waldseemüller world map, the first to use the name America, to such practical artifacts as a Polynesian stick chart, a creation of bent twigs, seashells, and coconut palms that was nevertheless capable of guiding an outrigger canoe safely across thousands of miles of trackless and seemingly endless ocean. Some, like the portolans, or sea charts, of the Age of Discovery, were closely guarded state secrets that shaped the rise and fall of empires; others circulated widely and showed such fabled routes as the Silk Road across western Asia and the Oregon and Santa Fe Trails that opened up the American West.--Jacket.
