**Magnesium in the Central Nervous System** Robert Vink,Mihai Nechifor,2011 The brain is the most complex organ in our body. Indeed, it is perhaps the most complex structure we have ever encountered in nature. Both structurally and functionally, there are many peculiarities that differentiate the brain from all other organs. The brain is our connection to the world around us and by governing nervous system and higher function, any disturbance induces severe neurological and psychiatric disorders that can have a devastating effect on quality of life. Our understanding of the physiology and biochemistry of the brain has improved dramatically in the last two decades. In particular, the critical role of cations, including magnesium, has become evident, even if incompletely understood at a mechanistic level. The exact role and regulation of magnesium, in particular, remains elusive, largely because intracellular levels are so difficult to routinely quantify. Nonetheless, the importance of magnesium to normal central nervous system activity is self-evident given the complicated homeostatic mechanisms that maintain the concentration of this cation within strict limits essential for normal physiology and metabolism. There is also considerable accumulating evidence to suggest alterations to some brain functions in both normal and pathological conditions may be linked to alterations in local magnesium concentration. This book, containing chapters written by some of the foremost experts in the field of magnesium research, brings together the latest in experimental and clinical magnesium research as it relates to the central nervous system. It offers a complete and updated view of magnesium's involvement in central nervous system function and in so doing, brings together two main pillars of contemporary neuroscience research, namely providing an explanation for the molecular mechanisms involved in brain function, and emphasizing the connections between the molecular changes and behavior. It is the untiring efforts of those magnesium researchers who have dedicated their lives to unraveling the mysteries of magnesium's role in biological systems that has inspired the collation of this volume of work.

*Drugging France* Sara E. Black,2022-09-15 In the nineteenth century, drug consumption permeated French society to produce a new norm: the chemical enhancement of modern life. French citizens empowered themselves by seeking pharmaceutical relief for their suffering and engaging in self-medication. Doctors and pharmacists, meanwhile, fashioned themselves as gatekeepers to these potent drugs, claiming that their expertise could shield the public from accidental harm. Despite these efforts, the unanticipated phenomenon of addiction laid bare both the embodied nature of the modern self and the inherent instability of the notions of individual free will and responsibility. *Drugging France* explores the history of mind-altering drugs in medical practice between 1840 and 1920, highlighting the intricate medical histories of opium, morphine, ether, chloroform, cocaine, and hashish. While most drug histories focus on how drugs became regulated and criminalized as dangerous addictive substances, Sara Black instead traces the spread of these drugs through French society, demonstrating how new therapeutic norms and practices of drug consumption transformed the lives of French citizens as they came to expect and even demand pharmaceutical solutions to their pain. Through self-experimentation, doctors developed new knowledge about these drugs, transforming exotic botanical substances and unpredictable chemicals into reliable pharmaceutical commodities that would act on the mind and body to modify pain, sensation, and consciousness. From the pharmacy counter to the boudoir, from the courtroom to the operating theatre, from the battlefield to the birthing chamber, *Drugging France* explores how everyday encounters with drugs reconfigured how people experienced their own minds and bodies.

**The Anthropological Demography of Health** Véronique Petit,Kaveri Qureshi,Yves Charbit,Philip Kreager,2020-10-30 The anthropological demography of health, as a field of interdisciplinary population research, has grown from the 1990s, extending to a remarkable range of key human and policy issues, including: genetic disorders; nutrition; mental health; infant, child, and maternal morbidity; malaria; HIV/AIDS; disability and chronic diseases; new reproductive technologies; and population ageing. By observing group formation and change over time, tracking people's networks, and observing variance between what people say and do, anthropological demography goes beyond the characteristically top-down formal methodologies of most mainstream socio-economic demography and population health. This path-breaking volume charts and integrates the growing body of research that combines ethnography with quantitative models and methods in the field of population health. It offers a clear agenda based on important conceptual and methodological advances, and often working in close collaboration with medical and historical research. Approaches to population that are grounded in sustained ethnographic and historical research provide more than substantive knowledge of how cultural and social formations interact with health. They enable understanding of how local institutions and experience of vital events come to be translated into the demographic and health measures on which survey and clinical programmes rely. This, in turn, makes possible critical evaluation of the empirical adequacy of such translation, reflection on what happens when these models and measures become standardised evaluations of health statuses, and what this implies for governance. The combination of anthropological, demographic, historical, and biological research has gone beyond the initial demographic prioritisation of fertility regulation, to take on an expanded range of key health policy issues, and locate them in the context of the inequalities that so frequently give rise to major health differentials. The Anthropological Demography of Health offers a clear agenda for the application and extension of combined anthropological and demographic thinking in population health, and will provide a point of reference for the field.

*The Tomb of the Artisan God* Serge Margel,Philippe Lynes,2019 The Tomb of the Artisan God provides a radical rereading of Timaeus, Plato's metaphysical text on time, eternity, and the relationship between soul and body. First published in French in 1995, the original edition of Serge Margel's book included an extensive introductory essay by Jacques Derrida, who drew on Margel's insights in developing his own concepts of time, the promise, the world, and khōra. Now available in English with a new preface by Margel, this engagement with Platonic thought proceeds from two questions that span the history of philosophy: What is time? What is the body?

*Lake Pavin* T  lesphore Sime-Ngando,Pierre Boivin,Emmanuel Chapron,Didier Jezequel,Michel Meybeck,2018-07-07 This book represents the first multidisciplinary scientific work on a deep volcanic maar lake in comparison with other similar temperate lakes. The syntheses of the main characteristics of Lake Pavin are, for the first time, set in a firmer footing comparative approach, encompassing regional, national, European and international aquatic science contexts. It is a unique lake because of its permanently anoxic monimolimnion, and furthermore, because of its small surface area, its substantially low human influence, and by the fact that it does not have a river inflow. The book reflects the scientific research done on the general limnology, history, origin, volcanology and geological environment as well as on the geochemistry and biogeochemical cycles. Other chapters focus on the biology and microbial ecology whereas the sedimentology and paleolimnology are also given attention. This volume will be of special interest to researchers and advanced students, primarily in the fields of limnology, biogeochemistry, and aquatic ecology.

*Healing with Poisons* Yan Liu,2021-06-22 Open access edition: DOI 10.6069/9780295749013 At first glance, medicine and poison might seem to be opposites. But in China’s formative era of pharmacy (200–800 CE), poisons were strategically employed as healing agents to cure everything from abdominal pain to epidemic disease. *Healing with Poisons* explores the ways physicians, religious figures, court officials, and laypersons used toxic substances to both relieve acute illnesses and enhance life. It illustrates how the Chinese concept of du—a word carrying a core meaning of “potency”—led practitioners to devise a variety of methods to transform dangerous poisons into effective medicines. Recounting scandals and controversies involving poisons from the Era of Division to the Tang, historian Yan Liu considers how the concept of du was central to how the people of medieval China perceived both their bodies and the body politic. He also examines the wide range of toxic minerals, plants, and animal products used in classical Chinese pharmacy, including everything from the herb aconite to the popular recreational drug Five-Stone Powder. By recovering alternative modes of understanding wellness and the body’s interaction with foreign substances, this study cautions against arbitrary classifications and exemplifies the importance of paying attention to the technical, political, and cultural conditions in which substances become truly meaningful. *Healing with Poisons* is freely available in an open access edition thanks to TOME (Toward an Open Monograph Ecosystem) and the generous support of the University of Buffalo.
