*Past, Present and Future of Computing Education Research* Mikko Apiola,Sonsoles López-Pernas,Mohammed Saqr,2023-04-17 This book presents a collection of meta-studies, reviews, and scientometric analyses that together reveal a fresh picture about the past, present, and future of computing education research (CER) as a field of science. The book begins with three chapters that discuss and summarise meta-research about the foundations of CER, its disciplinary identity, and use of research methodologies and theories. Based on this, the book proceeds with several scientometric analyses, which explore authors and their collaboration networks, dissemination practices, international collaboration, and shifts in research focus over the years. Analyses of dissemination are deepened in two chapters that focus on some of the most influential publication venues of CER. The book also contains a series of country-, or region-level analyses, including chapters that focus on the evolution of CER in the Baltic Region, Finland, Australasia, Israel, and in the UK & Ireland. Two chapters present case studies of influential CER initiatives in Sweden and Namibia. This book also includes chapters that focus on CER conducted at school level, and cover crucially important issues such as technology ethics, algorithmic bias, and their implications for CER. In all, this book contributes to building an understanding of the past, present and future of CER. This book also contributes new practical guidelines, highlights topical areas of research, shows who to connect with, where to publish, and gives ideas of innovative research niches. The book takes a unique methodological approach by presenting a combination of meta-studies, scientometric analyses of publication metadata, and large-scale studies about the evolution of CER in different geographical regions. This book is intended for educational practitioners, researchers, students, and anyone interested in CER. This book was written in collaboration with some of the leading experts of the field.

The Byzantine World Paul Stephenson,2010-12-20 The Byzantine World presents the latest insights of the leading scholars in the fields of Byzantine studies, history, art and architectural history, literature, and theology.

Those who know little of Byzantine history, culture and civilization between AD 700 and 1453 will find overviews and distillations, while those who know much already will be afforded countless new vistas. Each chapter offers an innovative approach to a well-known topic or a diversion from a well-trodden path. Readers will be introduced to Byzantine women and children, men and eunuchs, emperors, patriarchs, aristocrats and slaves. They will explore churches and fortifications, monasteries and palaces, from Constantinople to Cyprus and Syria in the east, and to Apulia and Venice in the west. Secular and sacred art, profane and spiritual literature will be revealed to the reader, who will be encouraged to read, see, smell and touch. The worlds of Byzantine ceremonial and sanctity, liturgy and letters, Orthodoxy and heresy will be explored, by both leading and innovative international scholars. Ultimately, readers will find insights into the emergence of modern Byzantine studies and of popular Byzantine history that are informative, novel and unexpected, and that provide a thorough understanding of both.

*Comparative Effectiveness Research (CER)* Francesco Chiappelli,2016 Briefly stated, comparative effectiveness research pertains to the direct, succinct and precise comparison of existing healthcare interventions to determine what works best for each individual patient, and which treatment course poses the greatest benefits, costs and harms. The core question of comparative effectiveness research goes beyond establishing what treatment works best, for whom, and under what circumstances: it is a hypothesis-driven endeavor designed to uncover and implement the consensus of the best evidence base for patient-centered, effectiveness-focused and evidence-based health care. Members at the Institute of Medicine and the Patient-Centered Outcomes Research concur that comparative effectiveness research involves the generation and synthesis of the best available evidence for a treatment intervention by means of a process driven by the PICOTS question/hypothesis, and are directed at comparing and contrasting the benefits, costs and harms of alternative methods to prevent, diagnose, treat, and monitor a clinical conditions with the specified intent of improving the delivery of health care. The purpose of comparative effectiveness research is to assist healthcare providers, patients, allied clinicians, caregivers and other stakeholders to engage together and make informed decisions that will improve healthcare at both the individual and population levels, and in so doing utilize the identified best evidence base in specific clinical settings, a process that the Agency for Healthcare Research and Quality defines as Translational Effectiveness. In brief, comparative effectiveness research is the tool and the process necessary for translational effectiveness. In this light, it is critical and timely to facilitate comparative effectiveness research as one of the essential and primary components of patient-centered, effectiveness-focused and evidence-based clinical decision-making in healthcare, as the premier process that results in improved patient outcomes, enhanced research planning, better products, and novel evidence-based policy development. This book is a compilation of the writings of several

experts in the field and their collaborators. Each chapter examines specific facets of the process of comparative effectiveness research-based clinical decision-making in the principal domains of healthcare, which are subsumed in this work as dentistry, Western and alternative medicine, nursing, and pharmacology. Taken together, the chapters in this book present a brief, yet comprehensive overview and discussion of the current state of comparative effectiveness in healthcare. They establish the central role of systematic reviews in the process of clinical decision-making in evidence-based health care, and examine in depth the statistical significance and the clinical relevance of actualizing and evaluating clinical decision-making. Additionally, policies in optimizing evidence-based, patient-centered and effectiveness-focused clinical outcomes, stakeholders engagement for raising health literacy in the U.S. and worldwide in this decade of the twenty-first century and beyond are discussed.

Initial National Priorities for Comparative Effectiveness Research Institute of Medicine,Board on Health Care Services,Committee on Comparative Effectiveness Research Prioritization,2009-11-14 Clinical research presents health care providers with information on the natural history and clinical presentations of disease as well as diagnostic and treatment options. In today's healthcare system, patients, physicians, clinicians and family caregivers often lack the sufficient scientific data and evidence they need to determine the best course of treatment for the patients' medical conditions. Initial National Priorities for Comparative Effectiveness Research(CER) is designed to fill this knowledge gap by assisting patients and healthcare providers across diverse settings in making more informed decisions. In this 2009 report, the Institute of Medicine's Committee on Comparative Effectiveness Research Prioritization establishes a working definition of CER, develops a priority list of research topics, and identifies the necessary requirements to support a robust and sustainable CER enterprise. As part of the 2009 American Recovery and Reinvestment Act, Congress appropriated \$1.1 billion in federal support of CER, reflecting legislators' belief that better decisions about the use of health care could improve the public's health and reduce the cost of care. The Committee on Comparative Effectiveness Research Prioritization was successful in preparing a list 100 top priority CER topics and 10 recommendations for best practices in the field.
