Holidays on Display William L. Bird, 2007-08-30 For millions of people the world over, the annual visit to a department store to view the festive window displays and visit Santa in his winter wonderland is a treasured holiday tradition. In America, the Thanksgiving holiday is almost inconceivable without Macy's annual parade. But how did holiday traditions like this begin? Who are the behind-the-scenes magicians that conjure up this unique blend of imagination, showmanship, and salesmanship? *Holidays on Display* is a comprehensive overview of the art and industry of the holiday display. Author William L. Bird, Jr., traces its evolution as holiday decorations moved from shop windows to building exteriors and out into the street in the form of parade floats. In this fascinating and colorful history we are introduced to turn-of-the-century trimmers hired by merchants to maintain product displays, and we marvel as advances in lighting, animation, and miniaturization lead to the incredible feats of creative self-expression practiced by today's window artists. Packed with rarely seen photographs and ephemera, *Holidays on Display* makes it easy to see why we have such lasting emotional attachments to animated Christmas windows, passing parades, and the ambient glow of holiday lights.

**Subject to Display** Jennifer A. Gonzalez, 2011-03-04 An exploration of the visual culture of "race" through the work of five contemporary artists who came to prominence during the 1990s. Over the past two decades, artists James Luna, Fred Wilson, Amalia Mesa-Bains, Pepón Osorio, and Renée Green have had a profound impact on the meaning and practice of installation art in the United States. In *Subject to Display*, Jennifer González offers the first sustained analysis of their contribution, linking the history and legacy of race discourse to innovations in contemporary art. Race, writes González, is a social discourse that has a visual history. The collection and display of bodies, images, and artifacts in museums and elsewhere is a primary means by which a nation tells the story of its past and locates the cultures of its citizens in the present. All five of the American installation artists González considers have explored the practice of putting human subjects and their cultures on display by staging elaborate dioramas or site-specific interventions in galleries and museums; in doing so, they have created powerful social commentary of the politics of space and the power of display in settings that mimic the very spaces they critique. These artists' installations have not only contributed to the transformation of contemporary art and museum culture, but also linked Latino, African American, and Native American subjects to the broader spectrum of historical colonialism, race dominance, and visual culture. From Luna's museum installation of his own body and belongings as "artifacts" and Wilson's provocative juxtapositions of museum objects to Mesa-Bains's allegorical home altars, Osorio's condensed spaces (bedrooms, living rooms; barbershops, prison cells) and Green's genealogies of cultural contact, the theoretical and critical endeavors of these artists demonstrate how race discourse is grounded in a visual technology of display.

**Public and Situated Displays** K. O'Hara, Mark Perry, E. Churchill, D. Russell, 2003-12-31 Public and situated display technologies can have an important impact

on individual and social behaviour and present us with particular interesting new design considerations and challenges. While there is a growing body of research exploring these design considerations and social impact this work remains somewhat disparate, making it difficult to assimilate in a coherent manner. This book brings together the perspectives of key researchers in the area of public and situated display technology. The chapters detail research representing the social, technical and interactional aspects of public and situated display technologies. The underlying concern common to these chapters is how these displays can be best designed for collaboration, coordination, community building and mobility. Presenting them together allows the reader to examine everyday display activities within the context of emerging technological possibilities.

**Handbook of Display Technology** Joseph A. Castellano, 2012-12-02 This book presents a comprehensive review of technical and commercial aspects of display technology. It provides design engineers with the information needed to select proper technology for new products. The book focuses on flat, thin displays such as light-emitting diodes, plasma display panels, and liquid crystal displays, but it also includes material on cathode ray tubes. Displays include a large number of products from televisions, auto dashboards, radios, and household appliances, to gasoline pumps, heart monitors, microwave ovens, and more. **Ubiquitous Display Environments** Antonio Krüger, Tsvi Kuflik, 2012-06-12 Our increasingly smart environments will sense, track and model users and provide them with personalized services. We can already embed computers in everyday objects such as shirt buttons and pencils; objects of all sizes, from wristwatches to billboards, will soon incorporate high-quality flexible displays; we have improved access to wireless Internet communication; and we are now transitioning from traditional linear to targeted interactive media. The convergence of these factors -- miniaturization, display technologies, wireless communication, and interactive media -- will allow us to leave our desktop computers and move to a radical computing paradigm, the ubiquitous display environment, where media and visual content will support a rich variety of display devices that enable users to interact with information artifacts in a seamless manner. This is one of the most exciting and important areas of technology development and this book addresses the challenge within the context of an educational and cultural experience. This is inherently a multidisciplinary field and the contributions span the related research aspects, including system architecture and communications issues, and intelligent user interface aspects such as aesthetics and privacy. On the scientific side, the authors integrate artificial intelligence, user modeling, temporal and spatial reasoning, intelligent user interfaces, and user-centric design methodologies in their work, while on the technological side they integrate mobile and wireless networking infrastructures, interfaces, group displays, and context-driven adaptive presentations. This book is of value to researchers and practitioners working on all aspects of ubiquitous display environments, and we hope it leads to innovations in human education, cultural heritage appreciation, and scientific development.

**Display Interfaces** Robert L. Myers, 2003-07-22 Display technology is evolving at an impressive rate with LCD and flat panel technologies gaining an increasing market share over traditional CRT display applications. Focusing on the development of new industry standards, this timely exposition of display systems and applications covers display timings, interfaces, specifications, measurement procedures and all forms of display control and identification. Reviews interface and graphics subsystem standards, including FPDI (Flat Panel Display Interface), P&D (Plug and Display) and Intel's Digital Video

Interface (DVI) Compares and contrasts current and future developments of television and computer industry standards Describes the major new display system applications (HDTV, notebook computer, cellphone, cockpit instrumentation etc) and illustrates how user needs have dictated technological requirements (eg power, size and bistability) Provides an accessible treatment of current and future display device development, including guidance on selecting devices for particular applications Designed to meet the needs of professionals using and implementing display technologies and as a reference for those developing new display systems, this text is a valuable resource for display technology developers and system integrators, video graphics interface engineers and professionals. The comprehensive coverage of this leading edge topic makes it also of interest to postgraduate students in Computer Science and Electrical Engineering. The Society for Information Display (SID) is an international society, which has the aim of encouraging the development of all aspects of the field of information display. Complementary to the aims of the society, the Wiley-SID series is intended to explain the latest developments in information display technology at a professional level. The broad scope of the series addresses all facets of information displays from technical aspects through systems and prototypes to standards and ergonomics

**Liquid Crystal Displays** Robert H. Chen, 2011-08-04 An unprecedented look into the basic physics, chemistry, and technology behind the LCD Most notably used for computer screens, televisions, and mobilephones, LCDs (liquid crystal displays) are a pervasive and increasingly indispensable part of our lives. Providing both an historical and a business-minded context, this extensive resource describes the unique scientific and engineering techniques used to create these beautiful, clever, and eminently useful devices. In this book, the history of the science and technology behind the LCD is described in a prelude to the development of the device, presenting a rational development theme and pinpointing innovations. The book begins with Maxwell's theory of electromagnetism, and the ultimately profound realization that light is an electromagnetic wave and an electromagnetic wave is light. The power of mathematical physics thus was brought to bear upon the study of light, and particularly the polarization of light by material bodies, including liquid crystals. After a brief historical description of polarization, a physical interpretation provides substance to the mathematical concepts. Subsequent chapters cover: Thermodynamics for liquid crystals The Maier-Saupe mean field, phenomenological, static continuum, and dynamic continuum theories The transistor and integrated circuit Glass, panels, and modules The calculus of variations The active matrix Semiconductor fabrication The global LCD business Additionally, the book illustrates how mathematics, physics, and chemistry are put to practical use in the LCDs we use every day. By describing the science from an historical perspective and in practical terms in the context of a device very familiar to readers, the book presents an engaging and unique view of the technology for everyone from science students to engineers, product designers, and indeed anyone curious about LCDs. Series Editor: Anthony C. Lowe, The Lambert Consultancy, Braishfield, UK The Society for Information Display (SID) is an international society, which has the aim of encouraging the development of all aspects of the field of information display. Complementary to the aims of the society, the Wiley-SID series is intended to explain the latest developments in information display technology at a professional level. The broad scope of the series addresses all facets of information displays from technical aspects through systems and prototypes to standards and ergonomics.

*Display of Art in the Roman Palace, 1550-1750* Gail Feigenbaum, 2014-08-01 This book explores the principles of the display of art in the magnificent Roman palaces of the early modern period, focusing attention on how the parts function to convey multiple artistic, social, and political messages, all within a splendid environment that provided a model for

aristocratic residences throughout Europe. Many of the objects exhibited in museums today once graced the interior of a Roman Baroque palazzo or a setting inspired by one. In fact, the very convention of a paintings gallery—the mainstay of museums—traces its ancestry to prototypes in the palaces of Rome. Inside Roman palaces, the display of art was calibrated to an increasingly accentuated dynamism of social and official life, activated by the moving bodies and the attention of residents and visitors. Display unfolded in space in a purposeful narrative that reflected rank, honor, privilege, and intimacy. With a contextual approach that encompasses the full range of media, from textiles to stucco, this study traces the influential emerging concept of a unified interior. It argues that art history—even the emergence of the modern category of fine art—was worked out as much in the rooms of palaces as in the printed pages of Vasari and other early writers on art.

*E-Paper Displays* Bo-Ru Yang, 2022-08-15 E-PAPER DISPLAYS An in-depth introduction to a promising technology, curated by one of its pioneering inventors Electronic paper (e-paper) has one of the most promising futures in technology. E-paper's potential is unlimited, as the displays require extremely low power and imitate the aesthetic of ink on the page. This allows e-paper devices to have a wider range of viewing angles than traditional LED products and are capable of being viewed in direct sunlight—and without any additional power. As a result, e-paper displays create less eye strain, have a greater flexibility in their use, and have the potential to be used in place of paper for billboard advertising, educational applications, and transport signage, and more. In *E-Paper Displays*, editor Bo-Ru Yang and his team of experts present a detailed view into the important technologies involved in e-paper displays, with a particular emphasis on how this technology's unique properties make possible a wide range of personal and professional electronic products. As climate change makes efficient energy use more important than ever, e-paper can become an essential tool for future products on a large scale. As we rely more and more on technology, having lightweight devices with long battery life will become critical. This book provides engineers and innovators with an introduction to this important technology and shows new pathways for development. *E-Paper Displays* readers will also find: The editor is one of the leading pioneers in this technology Contributions from an international team of experts in e-paper technology Descriptions of many advanced display types that rely on different principles than the widely used LCD and OLED types Another innovative title from Wiley-SID (Society for Information Displays) series As we enter a new stage in our industrial development, *E-Paper Displays* is an essential reference for computer engineers and developers, as well as innovators and scientists, and their students.

**Introduction to Flat Panel Displays** Jiun-Haw Lee, I-Chun Cheng, Hong Hua, Shin-Tson Wu, 2020-06-10 Introduction to Flat Panel Displays describes the fundamental physics and materials of major flat panel display technologies including LED, OLED, LCD, PDP and FED and reflective displays. A reference for graduate students and new entrants to the display industry, the book currently covers the basic science behind each display technology and gives solved problems and homework problems in each chapter to aid self-

study. With advancements in this field, there is enough change in the FPD industry to justify a second edition. This book offers the latest information on modern display technology and features new developments in OLED materials including phosphorescent, TTA, and TADF OLEDs, white light OLED and light extraction. It provides key information on blue phase, automotive lighting, quantum-dot enhanced LCDS, device configurations and performance, and LEDs, specifically nitrate-based. Application features include OLED for mobile, TV, light and flexible OLED, and reflective display specifically e-paper technology and low power consumption displays.

**Displays** Rolf R. Hainich, Oliver Bimber, 2011-07-05 In the last decade, new displays have been developed at an ever-increasing pace: bulky cathode ray tubes have been replaced by flat panels and mobile phones, tablets, and navigation systems have proliferated. Seeing this explosion raises tantalizing questions about the future evolution of visual displays: Will printed displays be sold by the square yard and glued to the wall? Will disposable displays, powered by printed batteries and with built-in storage chips, talk to us from cereal boxes? Will we begin wearing display glasses that simulate any kind or number of virtual displays we would ever need? Will chip implants directly interface to our brains, eliminating the need for any displays at all? These and other questions are explored in *Displays: Fundamentals & Applications*, which describes existing and emerging display technology. The book begins by presenting the basics of wave optics, geometric optics, light modulation, visual perception, and display measures, along with the principles of holography. It then describes the technology and techniques behind projection displays, projector-camera systems, stereoscopic and autostereoscopic displays, computer-generated holography, and near-eye displays. In addition, the authors discuss how real-time computer graphics and computer vision enable the visualization of graphical 2D and 3D content. The text is complemented by more than 400 rich illustrations, which give readers a clear understanding of existing and emerging display technology.
