*On Task* David Badre, 2022-02-22 A look at the extraordinary ways the brain turns thoughts into actions—and how this shapes our everyday lives Why is it hard to text and drive at the same time? How do you resist eating that extra piece of cake? Why does staring at a tax form feel mentally exhausting? Why can your child expertly fix the computer and yet still forget to put on a coat? From making a cup of coffee to buying a house to changing the world around them, humans are uniquely able to execute necessary actions. How do we do it? Or in other words, how do our brains get things done? In *On Task*, cognitive neuroscientist David Badre presents the first authoritative introduction to the neuroscience of cognitive control—the remarkable ways that our brains devise sophisticated actions to achieve our goals. We barely notice this routine part of our lives. Yet, cognitive control, also known as executive function, is an astonishing phenomenon that has a profound impact on our well-being. Drawing on cutting-edge research, vivid clinical case studies, and examples from daily life, Badre sheds light on the evolution and inner workings of cognitive control. He examines issues from multitasking and willpower to habitual errors and bad decision making, as well as what happens as our brains develop in childhood and change as we age—and what happens when cognitive control breaks down. Ultimately, Badre shows that cognitive control affects just about everything we do. A revelatory look at how billions of neurons collectively translate abstract ideas into concrete plans, *On Task* offers an eye-opening investigation into the brain's critical role in human behavior.

*Powerful Task Design* John Antonetti, Terri Stice, 2018-03 Applicable to educators across all disciplines and grade levels, this book provides the tools to analyze, design, and refine cognitively engaging tasks of learning.

**Task Switching and Cognitive Control** James Grange, George Houghton, 2014-04-25 One thing that separates human beings from the rest of the animal world is our ability to control behavior by referencing internal plans, goals, and rules. This ability, which is crucial to our success in a complex social environment, depends on the purposeful generation of task sets--states of mental readiness that allow each of us to engage with the world in a particular way or achieve a particular aim. This book reports the latest research regarding the activation, maintenance, and suppression of task sets. Chapters from many of the world's leading researchers in task switching and cognitive control investigate key issues in the field, from how we select the most relevant task when presented with distracting alternatives, to how we maintain focus on a task (eyes on the prize) and switch to a new one when our goals or external circumstances change. Chapters also explore the brain structures responsible for these abilities, how they develop during childhood, and whether they decline due to normal aging or neurological disorders. Of interest especially to scholars and students of cognitive psychology, the volume offers thorough, multi-disciplinary coverage of contemporary research and theories concerning this fundamental yet mysterious aspect of human brain function and behavior.

**Multitasking: Executive Functioning in Dual-Task and Task Switching Situations** Tilo Strobach, Mike Wendt, Markus Janczyk, 2018-03-27 Multitasking refers to performance of multiple tasks. The most prominent types of multitasking are situations including either temporal overlap of the execution of multiple tasks (i.e., dual tasking) or executing multiple tasks in varying sequences (i.e., task switching). In the literature, numerous attempts have aimed at theorizing about the specific characteristics of executive functions that control interference between simultaneously and/or sequentially active component of task-sets in these situations. However, these approaches have been rather vague regarding explanatory concepts (e.g., task-set inhibition, preparation, shielding, capacity limitation), widely lacking theories on detailed mechanisms and/or empirical evidence for specific subcomponents. The present research topic aims at

providing a selection of contributions on the details of executive functioning in dual-task and task switching situations. The contributions specify these executive functions by focusing on (1) fractionating assumed mechanisms into constituent subcomponents, (2) their variations by age or in clinical subpopulations, and/ or (3) their plasticity as a response to practice and training.

**The Role of the Learner in Task-Based Language Teaching** Craig Lambert, Scott Aubrey, Gavin Bui, 2023-05-03 This comprehensive, forward-looking text is the first holistic research overview and practical methods guide for researching the role that affective and conative factors play in second language learners' task performance and language acquisition. It provides a long overdue update on the role of the learner in task-based language teaching (TBLT). The book brings together theoretical background and major constructs, established and innovative methodological and technological tools, cutting-edge findings, and illuminating suggestions for future work. A group of expert scholars from around the world synthesize the state of the art, detail how to design and conduct empirical studies, and authoritatively set the agenda for future work in this critical, emerging area of language learning and instructional design. With a variety of helpful features like suggested research, discussion questions, and recommended further readings, this will be an invaluable resource to advanced students and researchers of second language acquisition, applied linguistics, psychology, education, and related areas.

**Contemporary Task-Based Language Teaching in Asia** Michael Thomas, Hayo Reinders, 2015-02-26 Over the last decade task-based approaches to language learning and teaching (TBLT) have become a global focus of increased levels of research. Governments around the world have turned to TBLT as a potential solution for curricula that lack authentic and meaningful engagement with language learning and are failing to motivate students as a result. This book focuses on Asia, where this shift has been particularly in evidence. TBLT has often been implemented in top-down approaches to curriculum development, which presents a huge range of challenges at the cultural as well as the pedagogic level. Contemporary Task Based Language Teaching in Asia looks at the drivers, stakeholders and obstacles across the region. Some countries have adapted TBLT to deal with the local constraints, others have found it hard to apply and many are still in the process of investigating its implementation in their specific contexts. This collection is important to all involved in language development, from curriculum reform to materials development. It assists from programme evaluation to the setting of assessment standards. The chapters cover all aspects of language education across Asia, from primary to tertiary, private and public education, as well as innovations at local, regional and national levels.

**Task-Based Language Teaching in Foreign Language Contexts** Ali Shehadeh, Christine A. Coombe, 2012 This volume extends the Task-Based Language Teaching: Issues, Research and Practice books series by deliberately exploring the potential of task-based language teaching (TBLT) in a range of EFL contexts. It is specifically devoted to providing empirical accounts about how TBLT practice is being developed and researched in diverse educational contexts, particularly where English is not the dominant language. By including contributions from settings as varied as Japan, China, Korea, Venezuela, Turkey, Spain, and France, this collection of 13 studies provides strong indications that the research and implementation of TBLT in EFL settings is both on the rise and interestingly diverse, not least because it must respond to the distinct contexts, constraints, and possibilities of foreign language learning. The book will be of interest to SLA researchers and students in applied linguistics and TESOL. It will also be of value to course designers and language teachers who come from a broad range of formal and informal educational settings encompassing a wide range of ages and types of language learners.

**Adam's Task** Vicki Hearne, 2016-10-25 A groundbreaking meditation on our human-animal relationships and the moral code that binds it. Adam's Task, Vicki Hearne's innovative masterpiece on animal training, brings our perennial discussion of the human-animal bond to a whole new metaphysical level. Based on studies of literary criticism, philosophy, and extensive hands-on experience in training, Hearne asserts, in boldly anthropomorphic terms, that animals (at least those that interact more with humans) are far more intelligent than we assume. In fact, they are capable of developing an understanding of the good, a moral code that influences their motives and actions. Drawing on an eclectic range of influences—Nietzsche, T. S. Eliot, Disney animal trainer William Koehler, and Genesis from the Bible, among others—Hearne writes in contemplative, exploratory, and brilliant prose as she interweaves personal anecdotes with philosophy. Hearne develops an entirely new system of animal training that contradicts modern animal behavioral research and that, as her examples show, is astonishingly effective. Widely praised, highly influential, and now with a new foreword by New York Times bestselling author Karen Joy Fowler, Adam's Task will make every trainer, animal psychologist, and animal-lover stop, think, and question.

**Interactive Task Learning** Kevin A. Gluck, John E. Laird, 2019-08-16 Experts from a range of disciplines explore how humans and artificial agents can quickly learn completely new tasks through natural interactions with each other. Humans are not limited to a fixed set of innate or preprogrammed tasks. We learn quickly through language and other forms of natural interaction, and we improve our performance and teach others what we have learned. Understanding the mechanisms that underlie the acquisition of new tasks through natural interaction is an ongoing challenge. Advances in artificial intelligence, cognitive science, and robotics are leading us to future systems with human-like capabilities. A huge gap exists, however, between the highly specialized niche capabilities of current machine learning systems and the generality, flexibility, and in situ robustness of human instruction and learning. Drawing on expertise from multiple disciplines, this Strüngmann Forum Report explores how humans and artificial agents can quickly learn completely new tasks through natural interactions with each other. The contributors consider functional knowledge requirements, the ontology of interactive task learning, and the representation of task knowledge at multiple levels of abstraction. They explore natural forms of interactions among humans as well as the use of interaction to teach robots and software agents new tasks in complex, dynamic environments. They discuss research challenges and opportunities, including ethical considerations, and make proposals to further understanding of interactive task learning and create new capabilities in assistive robotics, healthcare, education, training, and gaming. **Benchmark Tasks for Job Analysis** Sidney A. Fine, Maury Getkate, 2014-02-04 Human resource practitioners are repeatedly faced with the challenge of effectively using language to clearly describe the work performed on a job. Functional Job Analysis—an internationally recognized and respected job analysis method --has been meeting this

challenge for more than forty years. In this book, the authors show how human resource practitioners can use structured task statements and comprehensive rating scales to gain the perspective needed to map the domain of any job. In response to the demands of human resource practitioners, the book focuses on the seven scales used in Functional Job Analysis. More than 450 structured tasks were used to illustrate the breadth and scope of all the levels of these scales. These tasks can be used effectively as benchmarks to chart the work requirements of virtually any job. Personnel practitioners will find insights into the challenges of job analysis, as well as the tools needed to make job analysis more comprehensive, useful, and effective for human resources. Representing the most comprehensive information to date on the use of Functional Job Analysis scales for rating job tasks, this book: \*addresses the problems of using language to clearly describe how work is performed on the job; \*describes the relation between the need to carefully control the language of job analysis and the structure inherent in the Functional Job Analysis Worker Function scales--a conceptual link showing the reader that the key to understanding work is in the vocabulary used to describe work; \*contains the most comprehensive treatment of the way to write clear and comprehensive task statements available in the job analysis literature; and \*contains a sample task bank for the job of Functional Job Analysts--aiding the reader in understanding how a complete Functional Job Analysis should look.

**Testing Lecture Comprehension Through Listening-to-summarize Cloze Tasks** Haiping Wang, 2017-09-06 This book explores the effectiveness of listen-to-summarize tasks as a tool to assess lecture comprehension ability. It especially focuses on listen-to-summarize tasks that represent listeners' meaning building and the discourse construction of the lecture for listening assessment purposes. It discusses in depth the nature of lecture comprehension and introduces the approaches to assessing it. It also presents teachers' and students' perceptions of listen-to-summarize task demands and their respective implications. By observing interactions between test-takers' cognitive processes and the task itself, the book explores the effectiveness of these tasks. It also examines the discrepancy in cognitive processes between different language competence levels in detail, shedding light upon current research on lecture comprehension assessment and offering insights into listening comprehension instruction.

Task Design Liliom Strauch, 2008-10 Seminar paper from the year 2007 in the subject English - Discussion and Essays, grade: 1, University of Auckland (Department of Applied Language Studies and Linguistics), course: Task-based Language Teaching, 9 entries in the bibliography, language: English, abstract: Introduction When our group was

discussing the level of proficiency and the interests/preferences of the learners that would work on our task, we came to the conclusion that a thrilling story with interpersonal conflicts would be perfectly suitable. I started off with the first chapter and passed it on to the next person, who then added chapter two, introducing a new character to the plot. As we had five people in our group, the final story consists of five paragraphs and five different characters. Each of us comes from a different cultural background, which gives the story different perspectives. When I started with the first chapter I did not imagine the end to be as it is now. I was geared to French and Scandinavian thrillers, and therefore made my character come alive from a European viewpoint. Chapter three, four and five were written by our female, Asian group members, whose view of relationships and dilemmas are very different from mine. Their focus lies in double-faced characters, responsibilities towards family members and the burden of a student or working life. Chapter two was produced by the only native English speaker of our group, as can be seen by his use of vocabulary and sentence structure. This chapter also describes the most complex relation between people, with a third, nameless player entering the stage. Personal and literal experiences have had distinct influences on us and hence, a diverse outcome has been produced by us. I consider our group work as a task by itself, the task to design a task. We had to use our second language in order to communicate in the seminar room. We had to write our story in our second language, using our own linguistic resources. We also had to send
