The Java Tutorial Sharon Biocca Zakhour,Sowmya Kannan,Raymond Gallardo,2013-02-27 The Java®Tutorial, Fifth Edition, is based on Release 7 of the Java Platform Standard Edition. This revised and updated edition introduces the new features added to the platform, including a section on NIO.2, the new file I/O API, and information on migrating legacy code to the new API. The deployment coverage has also been expanded, with new chapters such as "Doing More with Rich Internet Applications" and "Deployment in Depth," and a section on the fork/join feature has been added to the chapter on concurrency. A special appendix, "Preparing for Java Programming Language Certification," lists the three exams available, details the items covered on each exam, and provides cross-references to where more information about each topic appears in the text. All of the material has been thoroughly reviewed by members of Oracle Java engineering to ensure that the information is accurate and up to date.

Tutorial Distance Learning Alfred Bork,Sigrun Gunnarsdottir,2012-12-06 Learning is a critical worldwide problem for humans, essential to create a peaceful and happy world. We have serious problems in learning in both wealthy and poor areas. New approaches to learning are needed, as the current system may not rise to the new challenges. This book proposes a new strategy for learning, worldwide and for all ages of students. Computer-based distance learning would be the major delivery mechanism, with very large numbers of students. The very frequent interactions between the student and the computer would be like that with a skilled human teacher. These interactions would take place in the student's native language, in both directions. A typical interaction would be a question to a student, and a free-form student response. Both voice and keyboard student input would be possible. The learning programs would work with each student until mastery is achieved, adapting to the needs of each. Students would be active learners. The book begins with the problems and goals of learning. It considers possible forms of distance learning, looking at the variables involved, current examples of distance learning, and possible future forms including examples from science fiction. It then investigates student interactions, considering both frequency of interactions and the quality of each interaction. Programs developed in the Educational Technology Center at the University of California, Irvine, illustrate the critical idea of tutorial learning with computers. Production of tutorial learning material and costs for a student hour of learning is discussed. The book ends with suggestions for future progress. Current hardware and software is fully adequate for the tasks described. Development of all required learning units is a major activity. After this development, both better quality of learning and lower costs are very likely. Further experimental work is essential to understand the possibilities.

Independent Component Analysis James V. Stone,2004 A fundamental problem in neural network research, as well as in many other disciplines, is finding a suitable representation of multivariate data, i.e. random vectors. For reasons of computational and conceptual simplicity, the representation is often sought as a linear transformation of the original data. In other words, each component of the representation is a linear combination of the original variables. Well-known linear transformation methods include principal component analysis, factor analysis, and projection pursuit. Independent component analysis (ICA) is a recently developed method in which the goal is to find a linear representation of nongaussian data so that the components are statistically independent, or as independent as possible. Such a representation seems to capture the essential structure of the data in many applications, including feature extraction and signal separation.

The Modeling Tutorial Graham Dawes,David Gordon,2017-05-30 Ever ask yourself, How does this person do that? ...and wish that you could do it as well? At the beating heart of everything we do is an essential set of patterns. Modeling is the process of eliciting those essential patterns. The Modeling Tutorial puts in your hands a clear and practical process for accessing these otherwise hidden patterns of thinking and behaving. Every chapter builds on the concepts and skills of the previous one, so that by the end you will have a detailed and thorough picture of the process. But The Modeling Tutorial goes beyond merely knowing what to do. In these 17 essays you get more than a detailed explanation of the process of modeling. They plunge you into the subtle processes of human experience, elevating you into someone who has a deep understanding of how human experience actually works. The Modeling Tutorial is illustrated throughout with examples from every day experience to help you grasp both the nuts and bolts of modeling and its underlying concepts. Also included is an annotated transcript of a complete elicitation, and a demonstration of translating that information into a model. If you want to know what makes us tick, The Modeling Tutorial is it.
