Defense against the Black Arts: How Hackers Do What They Do and How to Protect against It provides hands-on instruction to a host of techniques used to hack into a variety of systems. Exposing hacker methodology with concrete examples, this book shows you how to outwit computer predators at their own game. Among the many things you'll learn: How to get into a Windows operating system without having the username or password Vulnerabilities associated with passwords and how to keep them out of the hands of hackers How hackers use the techniques of computer forensic examiners to wreak havoc on individuals and companies Hiding one's IP address to avoid detection Manipulating data to and from a web page or application for nefarious reasons How to find virtually anything on the internet How hackers research the targets they plan to attack How network defenders collect traffic across the wire to indentify intrusions Using Metasploit to attack weaknesses in systems that are unpatched or have poorly implemented security measures The book profiles a variety of attack tools and examines how Facebook and other sites can be used to conduct social networking attacks. It also covers techniques utilized by hackers to attack modern operating systems, such as Windows 7, Windows Vista, and Mac OS X. The author explores a number of techniques that hackers can use to exploit physical access, network access, and wireless vectors. Using screenshots to clarify procedures, this practical manual uses step-by-step examples and relevant analogies to facilitate understanding, giving you an insider's view of the secrets of hackers.

Countering Fraud for Competitive Advantage Mark Button,Jim Gee,2013-02-04 Substantially reduce the largely hidden cost of fraud, and reap a new competitive advantage. As the title suggests, Countering Fraud for Competitive Advantage presents a compelling business case for investing in anti-fraud measures to counter financial crime. It looks at the ways of reaping a new competitive advantage by substantially reducing the hidden cost of fraud. Aimed at a wide business community and based on solid research, it is the only book to put forward an evidence-based model for combating corporate fraud and financial crime. Despite its increase and capture of the news headlines, corporate fraud is largely ignored by most organizations. Fraud is responsible for losses of up to nine percent of revenues—sometimes more. Yet, most organizations don't believe they have a problem and don't always measure fraud losses. This highlights an area for capturing a competitive advantage—with the right counter-fraud strategy, massive losses due to the cost of fraud can be reduced for a fraction of the return. Advocates a new model for tackling fraud and illustrates theories with best practice examples from around the world. The authors have close links with the Counter Fraud Professional Accreditation Board: Jim Gee is a world-renowned expert in the field, and has advised private companies and governments from more than 35 countries. Mark Button is Director of the leading Centre for Counter Fraud Studies, Portsmouth University, U.K. Organizations are losing millions of dollars to fraud. This book outlines a comprehensive approach to reducing financial crime and helping return some of the revenue lost to the cost of fraud.

Safe to be open Guibault, Lucie,Wiebe, Andreas,2013-12-06 This study addresses the most important legal issues when implementing an open access e-infrastructure for research data. It examines the legal requirements for different kinds of usage of research data in an open access infrastructure, such as OpenAIREplus, which links them to publications. The existing legal framework regarding potentially relevant intellectual property (IP) rights is analysed from the general European perspective as well as from that of selected EU Member States. Various examples and usage scenarios are used to explain the scope of protection of the potentially relevant IP rights. In addition different licence models are analysed in order to identify the licence that is best suited to the aim of open access, especially in the context of the infrastructure of OpenAIREplus. Based on the outcomes of these analyses, some recommendations to the European legislator as well as data- and e-infrastructure providers are given on improving the rights situation in relation to research data.
