Power and Policy Lawrence Lenz,2008 Through its military policy and foreign policy, America attained superpower status in a remarkably short period of time. Nations survive based on their ability to provide internal order and external defense. Unfortunately, foreign policy goals are not always attained, and sometimes those goals are based on questionable concepts. Power and Policy examines the relationship of the US military and naval power with its foreign policy objectives, exploring the policies and the use of force that propelled the United States into the first ranks of world power. The book asks when military action is needed and how such action can change the very context within which foreign policy unfolds. The study focuses on twelve major decisive events in history during the late 19th and early 20th centuries, including: a hurricane in Samoa and its effect on the German and US navies, the outcomes that followed the Spanish-American War, the role of Panama in the development of a trans-continental powerhouse, the US approach to southern neighbors including Nicaragua and Mexico, maneuvering for a stronger global position at the conclusion of World War I, and the establishment of naval parity with Great Britain. The facts, background and analysis enable readers to understand interventions that defined and then re-defined United States foreign policy for the rest of the 20th century.--Publisher's description.

NMR Methods for Characterization of Synthetic and Natural Polymers Rongchun Zhang,Toshikazu Miyoshi,Pingchuan Sun,2019-07-29 Since the introduction of FT-NMR spectroscopy around five decades ago, NMR has achieved significant advances in hardware and methodologies, accompanied with the enhancement of spectral resolution and signal sensitivity. Rapid developments in the polymers field mean that accurate and quantitative characterization of polymer structures and dynamics is the keystone for precisely regulating and controlling the physical and chemical

properties of the polymer. This book specifically focuses on NMR investigation of complex polymers for the polymer community as well as NMR spectroscopists, and will push the development of both fields. It covers the latest advances, for example high field DNP and ultrafast MAS methodologies, and show how these novel NMR methods characterize various synthetic and natural polymers.
