Advances in Usability Evaluation Marcelo M. Soares, Francesco Rebelo, 2012-07-09 Successful interaction with products, tools, and technologies depends on usable designs, accommodating the needs of potential users and does not require costly training. In this context, *Advances in Usability Evaluation* Part I discusses emerging concepts, theories, and applications of human factors knowledge focusing on the discovery and understanding of human interaction with products and systems for their improvement. The book covers devices and their interfaces, focusing on optimization of user devices and emphasizing visual and haptic feedback. It then discusses user studies, exploring the limits and capabilities of special populations, particularly the elderly, which can influence the design. It also examines the effect of changes in force and kinematics, physiology, cognitive performance, in the design of consumer products, tools and workplaces. Examining a variety of user-centered evaluation approaches, the concluding chapters details methods for developing products that can improve safety and human performance and at same time, the efficiency of the system. It reports on usability evaluations for different kinds of products and technologies, particularly for cellular phones, earphones, earphone controls, mattresses and pillows, package and professional tools, and service systems. The book provides new methods that enhance performance, expand capabilities, and optimize the fit between people and technology.

Print and Electronic Text Convergence Bill Cope, Diana Kalantzis, 2001 With the progressive digitisation of the book production processes, we see the emergence of a potentially potent mix of new technologies. Not potent because these technologies are capable of driving change alones, but potent for the commercial and cultural drivers which may work in concert with new technologies to

transform the world of books and reading. Central to these technological developments is the convergence of the technologies of etext and digital print. This book examines recent technological changes in book production. Our focus is in part on technological actuality, centred mostly on the digitisation of text and its consequences. Our focus is also on the realm of possibility. Where might these technological shifts lead us? What are the commercial and cultural conditions under which technological possibility might bear fruits? Within this volume we look specifically at the changing definition of a 'book'. A book is no longer a tangible thing; a book is what a book does. It is information architecture. We examine the various manifestations of electronic book readers and imminent technologies, such as electronic ink, including case study on the use of ebook reading devices by a lending library, and speculate about other uses of such devices. We see the convergence of print and etext - manifestations of the same thing - electronically stored text, with the difference demonstrated only in the shift in mindset necessary to accommodate emergent forms of digital text - as information services within a product-service system, the changing shape of digital design and changes in printing technologies from letterpress to the rise of digital printing.

Information Hiding: Steganography and Watermarking-Attacks and Countermeasures Neil F.

Johnson,Zoran Duric,Sushil Jajodia,2012-12-06 Information Hiding: Steganography and Watermarking - Attacks and Countermeasures deals with information hiding. With the proliferation of multimedia on the Internet, information hiding addresses two areas of concern: privacy of information from surveillance (steganography) and protection of intellectual property (digital watermarking). Steganography (literally, covered writing) explores methods to hide the existence of hidden messages. These methods include invisible ink, microdot, digital signature, covert channel, and spread spectrum communication. Digital watermarks represent a commercial application of steganography. Watermarks can be used to track the copyright and ownership of electronic media. In this volume, the authors focus on techniques for hiding information in digital media. They analyze the hiding techniques to uncover their limitations. These limitations are employed to devise attacks against hidden information. The goal of these attacks is to expose the existence of a secret message or render a digital watermark unusable. In assessing these attacks, countermeasures are developed to assist in protecting digital watermarking systems. Understanding the limitations of the current methods will lead us to build more robust methods that can survive various manipulation and attacks. The more information that is placed in the public's reach on the Internet, the more owners of such information need to protect themselves from theft and false representation. Systems to analyze techniques for uncovering hidden information and recover seemingly destroyed information will be useful to law enforcement authorities in computer forensics and digital traffic analysis. Information Hiding: Steganography and Watermarking - Attacks and Countermeasures presents the authors' research contributions in three fundamental areas with respect to image-based steganography and watermarking: analysis of data hiding techniques, attacks against hidden information, and countermeasures to attacks against digital watermarks. Information Hiding:

Steganography and Watermarking - Attacks and Countermeasures is suitable for a secondary text in a graduate level course, and as a reference for researchers and practitioners in industry.
