**Thinking 3D** Daryl Green, Laura Moretti, 2019 During the Renaissance, artists and illustrators developed the representation of truthful three-dimensional forms into a highly skilled art. As reliable illustrations of three-dimensional subjects became more prevalent, they also influenced the ways in which disciplines developed: architecture could be communicated much more clearly, mathematical concepts and astronomical observations could be quickly relayed, and observations of the natural world moved towards a more realistic method of depiction. Through essays on some of the world's greatest artists and thinkers--such as Leonardo da Vinci, Luca Pacioli, Andreas Vesalius, Johann Kepler, Galileo Galilei, William Hunter, and many more--this book tells the story of how we learned to communicate three-dimensional forms on the two-dimensional page. It features some of Leonardo da Vinci's ground-breaking drawings now in the Royal Collections and British Library as well as extraordinary anatomical illustrations, early paper engineering such as volvelles and flaps, beautiful architectural plans, and even views of the moon. With in-depth analysis of more than forty manuscripts and books, Thinking 3D also reveals the impact that developing techniques had on artists and draftsmen throughout time and across space, culminating in the latest innovations in computer software and 3D printing.

*3D Printing for Architects with MakerBot* Matthew B. Stokes, 2013-11 Recently we've seen consumer 3D printing gaining traction. The power of 3D printing is huge and its applications are seemingly endless--medicine, architecture, and food, to name a few. Incorporating 3D printing into your design cycle reduces overall project costs and lowers project duration, as it allows for rapid prototype iterations and instant, more descriptive feedback. 3D printing looks to revolutionize modern manufacturing and the technology is improving in leaps and bounds each and every day. 3D Printing for Architects with MakerBot strives to give you a good foundation for what MakerBot can do. It offers a hands-on way to learn about how 3D printing works, and how you can use its powerful features to produce great prints. With this book, you will learn everything you need to know about designing and printing architectural models using the MakerBot Replicator 2X and how to incorporate multiple parts and colours from designs created by you and the community. 3D Printing for Architects with MakerBot will take you through a number of clear, practical examples which will teach you how to unlock the power of your MakerBot Replicator 2X and the MakerBot community. It will show you how to create models composed of multiple parts and colours which are 3D printer ready. You will also learn about the different types of 3D printing and the history leading up to the purchase of MakerBot by Stratasys. You will take a look into the details of 3D printing software, learning how to convert your 3D CAD model into a physical 3D prototype and how various options will affect your print. You will then create more advanced architectural models with parts created to fit together that are designed either by you or from the extensive community libraries found on Thingiverse and GrabCAD.
