Aptamers in Bioanalysis M. Mascini,2009-04-27 This is the first book to detail bioanalytical technologies and methods that have been developed using aptamers in analytical, medical, environmental, and food science applications. After an introduction to aptamers, aptamer targets, and their general uses, it discusses different applications with particular attention to the comparison between aptamer-based biosensors and methods versus the corresponding immunosensors. Examples of aptamer-based diagnostic techniques include whole-cell protein profiling (proteomics) and medical diagnostics for the distinction of diseased versus healthy states. This is a core reference for analytical chemists, electrochemists, pharmaceutical/medicinal chemists, biotechnologists, and others.

Statistical Physics of Particles Mehran Kardar,2007-06-07
Statistical physics has its origins in attempts to describe the thermal properties of matter in terms of its constituent particles, and has played a fundamental role in the development of quantum mechanics. Based on lectures taught by Professor Kardar at MIT, this textbook introduces the central concepts and tools of statistical physics. It contains a chapter on probability and related issues such as the central limit theorem and information theory, and covers interacting particles, with an extensive description of the van der Waals equation and its derivation by mean field approximation. It also contains an integrated set of problems, with solutions to selected problems at the end of the book and a complete set of solutions is available to lecturers on a password protected website at www.cambridge.org/9780521873420. A companion volume, *Statistical Physics of Fields*, discusses non-mean field aspects of scaling and critical phenomena, through the perspective of renormalization group.

Estimating and Measurement for Simple Building Works in Hong Kong Caroline T. W. Chan, 2020-12-30 This book is an introductory text on building measurement and estimating for simple buildings in Hong Kong, based on the Hong Kong Standard Method of Measurement of Building Works 4th Edition Revised 2018 (HKSM4 Rev 2018). It provides a toolkit for students and surveying technicians who are new to the subject. This second edition updates the contents in line with the HKSM4 Rev 2018 and incorporates the latest industry developments such as BIM. The main text is divided into five parts following the development of a typical project. Part 1, Building the project team, introduces the team setup for a typical project. Part 2, Deciding the procurement strategy, explains the various procurement decisions to be made by an employer before any cost estimating and measurement work takes place. Part 3, Preparing for tender, covers the tendering methods, tender documentation and approximate estimating techniques used by Quantity Surveyors. Part 4, Measuring quantities, introduces measurement principles and HKSM4 Rev 2018, followed by a detailed review of the measurement methods for each major trade, with worked examples. Part 5, Estimating unit rates, explores the basic techniques for unit rate preparation. The book contains worked examples from real Hong Kong building projects, self-assessment questions, reminders and points of note. It is essential reading for Hong Kong construction and surveying students, international Quantity Surveyors working in the local area and those wanting international examples of Quantity Surveyors practice.
