Numerical Methods in Contact Mechanics Vladislav A. Yastrebov,2013-02-13 Computational contact mechanics is a broad topic which bringstogether algorithmic, geometrical, optimization and numericalaspects for a robust, fast and accurate treatment of contactproblems. This book covers all the basic ingredients of contact andcomputational contact mechanics: from efficient contact detectionalgorithms and classical optimization methods to new developmentsin contact kinematics and resolution schemes for both sequentialand parallel computer architectures. The book is self-contained andintended for people working on the implementation and improvementof contact algorithms in a finite element software. Using a new tensor algebra, the authors introduce some originalnotions in contact kinematics and extend the classical formulationof contact elements. Some classical and new resolution methods forcontact problems and associated ready-to-implement expressions areprovided. Contents: 1. Introduction to Computational Contact. 2. Geometry in Contact Mechanics. 3. Contact Detection. 4. Formulation of Contact Problems. 5. Numerical Procedures. 6. Numerical Examples. About the Authors Vladislav A. Yastrebov is a postdoctoral-fellow in ComputationalSolid Mechanics at MINES ParisTech in France. His work incomputational contact mechanics was recognized by the CSMA awardand by the Prix Paul Caseau of the French Academy of Technology andElectricité de France.

Nonlinear Solid Mechanics Adnan Ibrahimbegovic,2009-06-02 This book offers a recipe for constructing the numerical models for representing the complex nonlinear behavior of structures and their components, represented as deformable solid bodies. Its appeal extends to those interested in linear problems of mechanics.

Nonverbal Communication Ullica Segerstrale,Peter Molnar,2018-02-19 The field of nonverbal communication is a strategic site for demonstrating the inextricable interrelationship between nature and culture in human behaviour. This book, originally published in 1997, aims to explode the misconception that biology is something that automatically precludes or excludes culture. Instead, it points to the necessary grounding of our social and cultural capabilities in biological givens and elucidates how biological factors are systematically co-opted for cultural purposes. The book presents a complex picture of human communicative ability as simultaneously biologically and socioculturally influenced, with some capacities apparently more biologically hard-wired than others: face recognition, imitation, emotional communication, and the capacity for language. It also suggests that the dividing line between nonverbal and linguistic communication is becoming much less clear-cut. The contributing authors are leading researchers in a variety of fields, writing here for a general audience. The book is divided into sections dealing with, respectively, human universals, evolutionary and developmental aspects of nonverbal behaviour within a sociocultural context, and finally, the multifaceted relationships between nonverbal communication and culture.
