Crackling Noise Stefano Zapperi, 2022-05-12 The response of materials and the functioning of devices is often associated with noise. In this book, Stefano Zapperi concentrates on a particular type of noise, known as crackling noise, which is characterized by an intermittent series of broadly distributed pulses. While representing a nuisance in many practical applications, crackling noise can also tell us something useful about the microscopic processes ruling the materials behavior. Each crackle in the noise series usually corresponds to a localized impulsive event, an avalanche, occurring inside the material. A distinct statistical feature of crackling noise, and of the underlying avalanche behavior, is the presence of scaling, observed as power-law distributed noise pulses, long-range correlation, and scale free spectra. These are the hallmarks of critical phenomena and phase transitions. This work summarizes the current understanding of crackling noise, reviewing research undertaken in the past 30 years, from the early and influential ideas on self-organized criticality in sandpile models, to more modern studies on disordered systems. Crackling Noise covers the main theoretical models used to investigate avalanche phenomena, describes the statistical tools needed to analyze crackling noise, and provides a detailed discussion of a set of relevant examples of crackling noise in materials science. These include acoustic emission in fracture, strain bursts in amorphous and crystal plasticity, granular avalanches, magnetic noise in ferromagnets and superconductors, and fluid flow in porous media. The book concludes by considering the wider application of these models in the natural sciences.

Radio Crackling, Radio Gone Lisa Olstein, 2012-12-11 Winner of the Hayden Carruth Award Radio Crackling, Radio Gone is a debut collection of poetry that explores multiple logics of perception, association, and interpretation. Navigating the edges where things begin to disappear, the poems inhabit border zones of transformation where memory slides into imagination, wakefulness meets sleep, and things possessed become lost. What seemed a mystery was in fact a choice. Insert bird for sorrow. What seemed a memory was in fact a dividing line. Insert bird for wind. Insert wind for departure when everyone is standing still. . . Radio Crackling, Radio Gone was selected from the 1,200 submissions to the Hayden Carruth Award. By the time the anonymous manuscript was chosen as winner, the cover sheet was filled with readers' commentary: stunning and lovely and a bold YES!

Crinkle, Crackle, CRACK Marion Dane Bauer, 2019-01-15 Rap, bap, tap. Late one winter night, a child awakes to peculiar noises in the backyard- a bear! They journey together through the snowy forest as other animals eagerly join in, creating a parade to welcome the spring. This is a perfect seasonal read aloud to bridge Winter and Spring. In this mysterious picture book, sounds build anticipation as the ground thaws, and the icy pond breaks. Trees begin to bud and more animals join the fray, until... CRACK! Spring bursts from a gigantic egg full of gorgeous flowers and birds.
