Real-Time Collision Detection Christer Ericson, 2004-12-22 Written by an expert in the game industry, Christer Ericson's new book is a comprehensive quide to the components of efficient real-time collision detection systems. The book provides the tools and know-how needed to implement industrialstrength collision detection for the highly detailed dynamic environments of applications such as 3D games, virtual reality applications, and physical simulators. Of the many topics covered, a key focus is on spatial and object partitioning through a wide variety of grids, trees, and sorting methods. The author also presents a large collection of intersection and distance tests for both simple and complex geometric shapes. Sections on vector and matrix algebra provide the background for advanced topics such as Voronoi regions, Minkowski sums, and linear and quadratic programming. Of utmost importance to programmers but rarely discussed in this much detail in other books are the chapters covering numerical and geometric robustness, both essential topics for collision detection systems. Also unique are the chapters discussing how graphics hardware can assist in collision detection computations and on advanced optimization for modern computer architectures. All in all, this comprehensive book will become the industry standard for years to come.

The KnowHow Book of Detection Judy Hindley, Donald Rumbelow, 1997 A mystery story tests readers' imaginations while providing insight into the world of police detectives.

The Manual of Detection Jedediah Berry,2009 In this tightly plotted debut novel, an unlikely detective, armed only with an umbrella and a singular handbook, must untangle a string of crimes committed in and through people's dreams.

Cheating on Tests Gregory J. Cizek,1999-07 Cheating on Tests is the first book to offer a comprehensive look at this pervasive and weighty problem. It is organized around seven major objectives: introduce and define the problem of cheating and document the extent of its occurrence; catalog and present information on the methods used to cheat on tests; provide information on methods useful for preventing cheating; describe methods used to detect cheating once it has occurred; synthesize what is known about predispositions, correlates, and cultural differences in cheating; summarize legal issues related to cheating; and illustrate ways in which individuals and institutions respond to cheating.

Face Detection and Gesture Recognition for Human-Computer Interaction Ming-Hsuan Yang, Narendra Ahuja, 2012-12-06 Traditionally, scientific fields have defined boundaries, and scientists work on research problems within those boundaries. However, from time to time those boundaries get shifted or blurred to evolve new fields. For instance, the original goal of computer vision was to understand a single image of a scene, by identifying objects, their structure, and spatial arrangements. This has been referred to as image understanding. Recently, computer vision has gradually been making the transition away from understanding single images to analyzing image sequences, or video understanding. Video understanding deals with understanding of video sequences, e. g., recognition of gestures, activities, facial expressions, etc. The main shift in the classic paradigm has been from the recognition of static objects in the scene to motion-based recognition of actions and events. Video understanding has overlapping research problems with other fields, therefore blurring the fixed boundaries. Computer graphics, image processing, and video databases have obvious overlap with computer vision. The main goal of computer graphics is to gener ate and animate realistic looking images, and videos. Researchers in computer graphics are increasingly employing techniques from computer vision to gen erate the synthetic imagery. A good example of this is image-based rendering and modeling techniques, in which geometry, appearance, and lighting is de

rived from real images using computer vision techniques. Here the shift is from synthesis to analysis followed by synthesis.

Bioaerosol Detection Technologies Per Jonsson, Göran Olofsson, Torbjörn Tjärnhage, 2014-07-31 This book is intended to give technological background and practical examples, but also to give general insight into the on-going technology development in the area of biodetection. The content is therefore suitable for an array of stakeholders (decision makers, purchasing officers, etc.) and end-users of biodetection equipment within the areas of health, environment, safety and security, and military preparation. The book is divided into three sections. The first section discusses the fundamental physical and biological properties of bioaerosol's. The second section goes into more detail and discusses in-depth the most commonly used detection principles. The third section of the book is devoted to technologies that have been used in standoff applications. The last section of the book gives an overview of trends in bioaerosol detection. The reader of this book will gain knowledge about the different biodetection technologies and thus better judge their capabilities in relation to desired applications.

Privacy-Respecting Intrusion Detection Ulrich Flegel,2007-08-28 Effective response to misuse or abusive activity in IT systems requires the capability to detect and understand improper activity. Intrusion Detection Systems observe IT activity, record these observations in audit data, and analyze the collected audit data to detect misuse. Privacy-Respecting Intrusion Detection

introduces the concept of technical purpose binding, which restricts the linkability of pseudonyms in audit data to the amount necessary for misuse detection. Also, it limits the recovery of personal data to pseudonyms involved in a detected misuse scenario. The book includes case studies demonstrating this theory, and solutions that are constructively validated by providing algorithms.

Radar Target Detection Daniel Meyers,2012-12-02 Radar Target Detection: Handbook of Theory and Practice covers a set of graphical solutions to the detection problem, designated as Meyer Plots, for radar systems design. A radar system's major purpose is the detection and location of an object by means of a return signal, which could be either a reflection or a beacon. This book is composed of four chapters. Chapter 1 presents the basic radar range equation, which is the basic relationship which permits the calculation of echo signal strength from measurable or known parameters of the radar transmitter, antenna, propagation path, and target. Chapter 2 provides examples for determining statistical signal detection using Meyer Plots, particularly for determining detection probability and integration loss and efficiency. Chapter 3 describes the application of target models to determination of detection probability. Chapter 4 examines how Meyer Plots can be used to solve problems involving most any target model.

Molecular Diversity and PCR-detection of Toxigenic Fusarium Species and Ochratoxigenic Fungi G. Mulè, John A. Bailey, B.M. Cooke, A. Logrieco, 2012-09-19 Toxigenic Fusarium species and ochratoxigenic fungi are responsible for various plant diseases which have important consequential effects on both human and animal health worldwide. The development of rapid, robust and sensitive detection methods based on new molecular technologies is urgently needed in order to identify fungal contamination in the field and quantify toxin accumulation in food and animal feed. Most of the contributions in this special issue are from results obtained through the EU 5th Framework project (QLKI-CT-1998-01380) DETOX-FUNGI: early detection of toxigenic Fusarium species and ochratoxi genic fungi in plant products, which has strongly stimulated interaction and co-operation between many European scientists. Valuable contributions from other scientists have guaranteed a complete overview of this stimulating and interesting topic. This is the third special issue published in the European Journal of Plant Pathology concerning my cotoxigenic fungi under the aegis of COST Action 835 'Agriculturally Important Toxigenic Fungi'. The first two dealt with 'Mycotoxins in Plant Disease' (Vol. 108(7) 2002) and 'Epidemiology of Mycotoxin Pro ducing Fungi' (Vol. 109(7) 2003). The present issue contains contributions which cover aspects of molecular diversity, phylogeny and PCR-detection of toxigenic Fusarium species and various ochratoxigenic fungi. We hope these will prove helpful to researchers involved in similar work and will stimulate the future studies required for the early detection of these fungi, which is so essential for overcoming the health risks associated with mycotoxincontaminated food products.

New Developments in Unsupervised Outlier Detection Xiaochun Wang, Xiali Wang, Mitch Wilkes, 2020-11-24 This book enriches unsupervised outlier detection research by proposing several new distance-based and density-based outlier scores in a k-nearest neighbors' setting. The respective chapters highlight the latest developments in k-nearest neighbor-based outlier detection research and cover such topics as our present understanding of unsupervised outlier detection in general; distance-based and density-based outlier detection in particular; and the applications of the latest findings to boundary point detection and novel object detection. The book also offers a new perspective on bridging the gap between k-nearest neighbor-based outlier detection and clustering-based outlier detection, laying the groundwork for future advances in unsupervised outlier detection research. The authors hope the algorithms and applications proposed here will serve as valuable resources for outlier detection researchers for years to come.

Nuclear Detection David Maurer,2009-09 In April 2005, the Domestic Nuclear Detection Office (DNDO) was established to enhance and coordinate fed., state, and local efforts to combat nuclear smuggling domestically and overseas. DNDO was directed to develop, in coordination with the depts. of DoD, DoE, and State, a global strategy for nuclear detection -- a system of radiation detection equipment and interdiction activities domestically and abroad. This report examines: (1) DNDO's progress in developing programs to address critical gaps in preventing nuclear smuggling domestically; (2) DNDO's role in supporting other agencies' efforts to combat nuclear smuggling overseas; and (3) the amount budgeted by DoD, DoE, and State for programs that constitute the global nuclear detection strategy.

Metal Detecting - Learning How the Easy Way! Ronald J. Kamrowski,2011-02 Ron Kamrowski has written this book to share the experiences of using a metal detector. Most writings of this nature deal with the workings of a metal detector, this work contains actual events to explain that there are literally millions of places to search. Untouched areas abound in the United States where history, although only dating a few centuries, can be discovered in your own backyard.

Sequence Detection for High-Density Storage Channels Jaekyun Moon,Larry Richard Carley,1992-08-31 Magnetic data storage can be viewed as a data communication system. This is not a sUlprising view, considering that data storage is essentially the transfer of data between different times. The past decade has indeed seen rapidly growing interest in applying improved coding and detection techniques to magnetic data storage, a traditional approach to enhance performance of communication channels. Since its inception in the 1930's, the magnetic recording industry has achieved impressive progress in data capacity. This has been made possible mainly by innovations and advances in heads and media design. However, as the demand for higher storage capacity continues in the modem information era, a need arises to explore other possibilities to help meet the ever-growing demand. Advanced coding and detection are one such possibility, providing an efficient, cost-effective means to increase data capacity. In fact, with the advent of modem Ie technology which has enabled real-time implementation of increasingly complex signal processing algorithms, advanced coding and detection are rapidly

becoming a major issue in the development of improved data storage products. While there have been remarkable advances in recent years in the areas of both coding and detection for data storage, this book focuses only on data detection, or the processing of readback waveforms to reproduce stored data, in conjunction with the traditional modulation coding method called run length-limited or (d,k) coding.

Performance Metrics for the Global Nuclear Detection Architecture National Research Council, Division on Earth and Life Studies, Nuclear and Radiation Studies Board, Committee on Evaluating the Performance Measures and Metrics Development for the Global Nuclear Detection Architecture, 2013-12-12 The Global Nuclear Detection Architecture (GNDA) is described as a worldwide network of sensors, telecommunications, and personnel, with the supporting information exchanges, programs, and protocols that serve to detect, analyze, and report on nuclear and radiological materials that are out of regulatory control. The Domestic Nuclear Detection Office (DNDO), an office within the Department of Homeland Security (DHS), coordinates the development of the GNDA with its federal partners. Performance Metrics for the Global Nuclear Detection Architecture considers how to develop performance measures and guantitative metrics that can be used to evaluate the overall effectiveness and report on progress toward meeting the goals of the GNDA. According to this report, two critical components are needed to evaluate the effectiveness of the GNDA: a new strategic plan with outcome-based metrics and an analysis framework to enable assessment of outcome-based metrics. The GNDA is a complex system of systems meant to deter and detect attempts to unlawfully transport radiological or nuclear material. The recommendations of Performance Metrics for the Performance Metrics for the Global Nuclear Detection Architecture may be used to improve the GNDA strategic plan and the

reporting of progress toward meeting its goals during subsequent review cycles.

Global Infectious Disease Surveillance and Detection Institute of

Medicine, Board on Global Health, Forum on Microbial Threats, 2007-11-11 Early detection is essential to the control of emerging, reemerging, and novel infectious diseases, whether naturally occurring or intentionally introduced. Containing the spread of such diseases in a profoundly interconnected world requires active vigilance for signs of an outbreak, rapid recognition of its presence, and diagnosis of its microbial cause, in addition to strategies and resources for an appropriate and efficient response. Although these actions are often viewed in terms of human public health, they also challenge the plant and animal health communities. Surveillance, defined as the continual scrutiny of all aspects of occurrence and spread of a disease that are pertinent to effective control, involves the systematic collection, analysis, interpretation, and dissemination of health data. Disease detection and diagnosis is the act of discovering a novel, emerging, or reemerging disease or disease event and identifying its cause. Diagnosis is the cornerstone of effective disease control and prevention efforts, including surveillance. Disease surveillance and detection relies heavily on the astute individual: the clinician, veterinarian, plant pathologist, farmer, livestock manager, or agricultural extension agent who notices something unusual, atypical, or suspicious and brings this discovery in a timely way to the attention of an appropriate representative of human public health, veterinary medicine, or agriculture. Most developed countries have the ability to detect and diagnose

human, animal, and plant diseases. Global Infectious Disease Surveillance and

Detection: Assessing the Challenges-Finding Solutions, Workshop Summary is part of a 10 book series and summarizes the recommendations and presentations of the workshop.

Tracers Detect Aquifer Contamination ,1995 The EPA's National Laboratory (NRMRL) at Ada, OK, along with the University of Florida and the University of Texas, have developed a tracer procedure to detect the amount of contamination in aquifer formations. The tracer procedure has been successfully applied in a highly controlled field experiment in a contaminated cobbly, sandy gravel aquifer at Hill Air Force Base in Layton, UT. the tracer procedure should substantially improve our ability to remediate aquifers and is an improvement over the traditional reliance upon water samples from monitoring wells and core samples.
