Subversion Lennart Maschmeyer,2024-03-04 In Subversion, Lennart Maschmeyer provides a powerful

new theory and analysis of an age-old concept. While a strategy of subversion offers great strategic promise in theory, it faces an underappreciated set of challenges that limit its strategic value in practice. Drawing from two major cases--the KGB's use of traditional subversion methods to crush the Prague Spring in 1968 and Russia's less successful use of cyberwarfare against Ukraine since 2014--Maschmeyer demonstrates both the benefits and weaknesses of the approach. While many believe that today's cyber-based subversion campaigns offer new strategic opportunities, they also come with their own challenges. Because of these disadvantages, cyber operations continue to fall short of expectations--most recently in the Russo-Ukrainian war. By showing that traditional subversion methods remain the more potent threat, Subversion forces us to reconsider our fears of the subversive potential of cyberwar.

Pregnancy After Assisted Reproductive Technology Eric Jauniaux, Botros Rizk, 2012-09-06 Practical, evidence-based guide to managing ART pregnancies, based on 30 years of clinical experience, including gynaecological, genetic and obstetric complications.

Constructing cybersecurity Andrew Whiting, 2020-05-09 Constructing cybersecurity adopts a constructivist approach to cybersecurity and problematises the state of contemporary knowledge within this field. Setting out by providing a concise overview of such knowledge this book subsequently adopts Foucauldian positions on power and security to highlight

assumptions and limitations found herein. What follows is a detailed analysis of the discourse produced by various internet security companies demonstrating the important role that these security professionals play constituting and entrenching this knowledge by virtue of their specific epistemic authority. As a relatively new source within a broader security dispositif these security professionals have created relationships of mutual recognition and benefit with traditional political and security professionals.

Mobile Security Products for Android Philipp Kratzer, Christoph Gruber, Andreas Clementi, David Lahee, Philippe Rödlach, Peter Stelzhammer, 2014-10-14 We have once again tested security products for smartphones running Google's Android operating system. Our report covers details of the products made by leading manufacturers. Smartphones represent the future of modern communications. In 2013, more than 1 billion smartphones were sold, a further milestone in the advance of these devices¹. A study published by Facebook emphasises the importance of smartphones in our lives; about 80% of users make use of their smartphone within 15 minutes of waking up each day. At the same time, the traditional function of a telephone is becoming less and less important. The high quality of integrated cameras means that the smartphone is increasingly used for photography. As well as with photos, users trust their devices with their most personal communications, such as Facebook, WhatsApp and email. This brings some risks with it, as such usage makes the smartphone interesting

for criminals, who attempt to infect the device with malware or steal personal data. There is also the danger brought by phishing attacks. These days, the use of security software on a PC or laptop is seen as essential. However, many smartphone users do not yet have the same sense of responsibility, even though their devices store personal data, private photos, Internet banking information or even company data. As modern smartphones are often expensive to buy, they are also an attractive target for thieves. Top-quality smartphones cost several hundred Euros. As it is not possible to physically prevent them from being stolen, they must be made less attractive to thieves. Consequently, many of today's security products contain not only malware protection, but also highly developed theft-protection functions, which make the device less attractive to thieves (e.g. by locking the device), and help the owner to find it again.
