Peter Bexte, Christoph Girardet, Matthias Müller

Economic Development in New Zealand James E. Rowe,2005

Puts economic development policies and strategies into an historical perspective and identifies the key factors that have been influential in shaping the country's development policies and potential. This book provides an insightful overview of the economic development process in New Zealand.

MOCAK Museum of Contemporary Art in Krakow Maria Anna Potocka,2018 MOCAK Museum of Contemporary Art in Krakow, which opened on 19 May 2011, is the first post-war institution in Poland founded and purpose-built for the presentation of international contemporary art. The Museum's vibrant programme extends beyond its physical boundaries, and had included exhibitions in venues across Poland and in wider Europe, from the MAXXI - Museo Nazionale delle Arti del XXI Secolo - to the Center for Persecuted Arts in Solingen, the Semperoper Dresden, Kunstmuseum Gelsenkirchen, the Exhibition and Conference Centre LITEXPO in Vilnius and the Palace of Art in Lviv. This selection, chosen by the Director herself, is the perfect introduction to this diverse collection. Her incisive commentary elucidates the complex works displayed and grants new and thought-provoking

insights into the work and workings of contemporary artists.

AUTHOR: Maria Anna Potocka has been the Director of the MOC AK Museum of Contemporary Art in Krakow since 2010. She is the founder of four art galleries, the creator of an international art collection (1973-2010, donated to MOC AK) and the curator of numerous exhibitions. She has authored many books and theoretical texts and is a member of the IKG, AICA, ICOM and SPP. **SELLING POINTS:** * Incisive commentary illuminates complex works for all readers, whatever their previous engagement with contemporary art * The vast majority of the works featured are by living artists, giving the book a fresh and vivid appeal * New colour photography captures the detail in the diverse range of mediums shown 40 colour images

Radical Simplicity Jim Merkel, 2003-09-03 Imagine you are first in line at a potluck buffet. The spread includes not just food and water, but all the materials needed for shelter, clothing, healthcare, and education. How do you know how much to take? How much is enough to leave for your neighbors behind you - not just the six billion people, but the wildlife, and the as-yet-unborn? In the face of looming ecological disaster, many people feel the need to change their own lifestyles as a tangible way of transforming our

unsustainable culture. *Radical Simplicity* is the first book that guides the reader to a personal sustainability goal, then offers a process to monitor progress to a lifestyle that is equitable amongst all people, species, and generations. It employs three tools to help readers begin their customized journey to simplicity: It builds on steps from *Your Money or Your Life* so readers can design their own personal economics to save money, get free of debt, and align their work with their values. It uses refined tools from *Our Ecological Footprint* so readers can measure how much nature is needed to supply all they consume and absorb their waste. And by advocating time alone in wild nature, it opens readers to another reality with humanity as one species among many on a complex and inter-related planet. Combining lyrical narrative, compassionate advocacy and absorbing science, *Radical Simplicity* is a practical, personal answer to 21st century challenges that will appeal as much to Cultural Creatives and students as to spiritual seekers, policy makers and sustainability professionals.

The Case Against Immigration Roy Howard Beck, 1996 Beck's book redefines a flashpoint issue for America's future and for the 1996 elections, showing how current high immigration--far beyond traditional levels--benefits mainly the rich, and why immigration

rates must be drastically lowered to ensure that America remains a society of opportunity for all its citizens, including recent immigrants.

Censoring Science Mark Stander Bowen,2008 Documents the Bush administration's censorship of a climatologist whose work demonstrated the dangers of global warming, in an account that explains the scientific principles behind global warming and identifies ways to prevent an environmental disaster.

Green Space, Green Time Connie Barlow,2012-12-06 Over the last few centuries, science has usurped domains of knowledge that were once the province of religion. At the same time, however, both science and religion have enforced strict boundaries throughout. Science can describe the world to us, but it cannot tell us about meaning or values. This is a compelling case for breaching this barrier - in effect, for a reunification of science and religion.

Thinking Like a Mountain John Seed,Joanna Macy,Pat Fleming,Arne Naess,2007 This book of readings, meditations, rituals and workshop notes prepared on three continents provides a context for ritual identification with the natural environment. As relevant today as when it was originally published in 1988, this

classic of the sustainability movement helps us experience our place in the web of life - rather than at the apex of some human-centered pyramid. An important deep ecology educational tool for activist, school and religious groups, it can also be used for personal reflection.

Maybe One Bill McKibben, 2013-06-25 From the groundbreaking, bestselling author of *The End of Nature*, a controversial and provocative book arguing that to help the planet we should begin to voluntarily limit our numbers. Bill McKibben's books and essays on our environment -- physical and spiritual -- have shaped and spurred debate since *The End of Nature* was published in 1989. Then, he sounded one of the earliest alarms about global warming; the decade of science since has proved his prescience. Now, in *Maybe One*, he takes on the most controversial of environmental problems -- population. We live in a unique and dangerous time, he asserts, when the planet's limits are being tested and voluntary reductions in American childbearing could make a crucial difference. The father of a single child himself, McKibben maintains that bringing one, and no more than one, child into this world will hurt neither your family nor our nation -- indeed, it can be an optimistic step toward the future. *Maybe*

One is not just an environmental argument but a highly personal and philosophical one. McKibben cites new and extensive research about the developmental strengths of only children; he finds that single kids are not spoiled, weird, selfish, or asocial, but pretty much the same as everyone else. McKibben recognizes that the transition to a stable population size won't be easy or pain-free but ultimately is inevitable. Maybe *One* provides the basis for provocative, powerful thought and discussion that will influence our thinking for decades to come.

Big-Box Swindle Stacy Mitchell, 2007-10-01 A Book Sense Pick and Annual Highlight With a New Afterword In less than two decades, large retail chains have become the most powerful corporations in America. In this deft and revealing book, Stacy Mitchell illustrates how mega-retailers are fueling many of our most pressing problems, from the shrinking middle class to rising pollution and diminished civic engagement—and she shows how a growing number of communities and independent businesses are effectively fighting back. Mitchell traces the dramatic growth of mega-retailers—from big boxes like Wal-Mart, Home Depot, Costco, and Staples to chains like Starbucks, Olive Garden, Blockbuster, and Old Navy—and the precipitous decline of independent

businesses. Drawing on examples from virtually every state in the country, she unearths the extraordinary impact of these companies and the big-box mentality on everything from soaring gasoline consumption to rising poverty rates, failing family farms, and declining voting levels. Along the way, Mitchell exposes the shocking role government policy has played in the expansion of mega-retailers and builds a compelling case that communities composed of many small, locally owned businesses are healthier and more prosperous than those dominated by a few large chains. More than a critique, *Big-Box Swindle* provides an invigorating account of how some communities have successfully countered the spread of big boxes and rebuilt their local economies. Since 2000, more than two hundred big-box development projects have been halted by groups of ordinary citizens, and scores of towns and cities have adopted laws that favor small-scale, local business development and limit the proliferation of chains. From cutting-edge land-use policies to innovative cooperative small-business initiatives, Mitchell offers communities concrete strategies that can stave off mega-retailers and create a more prosperous and sustainable future.

The Voice of the Earth Theodore Roszak, 1992 prevailing

Reality Principle would have it, nothing could be greater madness than to believe that beast and plant, mountain and river have a 'point of view.' The Voice of the Earth seeks to bridge this centuries-old split between the psychological and the ecological. A true ecopsychology, Roszak insists, sees the needs of the planet and the needs of the person as a continuum. In a sense that weaves science and psychiatry, poetry and politics together, he shows that.

Learning from Vernacular Pierre Frey, 2010 In 1964, Bernard Rudofsky curated the exhibition *Architecture Without Architects* at The Museum of Modern Art in New York, thereby drawing the attention of the postwar Western public to traditional architectures, rescuing them from the ignominy to which they had been consigned by the 'national' ideologies of Europe in the 1930s. In the early 1980s, Ivan Illich published a number of radical critiques of modernity in which he drew attention to 'vernacular' values, proposing a trenchant but hospitable definition of this term. It derives from Roman law, in which everything produced within the household for consumption within the household and not for sale or exchange is vernacular. In order to locate this proposition within the field of architectural criticism, this book borrows with ironic

intent part of the title of Robert Venturi's celebrated work, *Learning from Las Vegas* (1977), which launched the fashion for post-modernism in architecture. Taking advantage of a collection of maquettes of vernacular architecture (the only one of its kind in the world), whose special attributes he highlights and whose value he underlines, the author selects contemporary realisations by architects from Africa, Asia, America and Europe that seem to him to constitute a 'new vernacular architecture'. The emphasis here is on materials available on the fringes of the market, on the safeguarding and development of traditional know-how, on the social role of the architect and on the teaching of architecture.

Simón Vélez, Architecte Pierre Frey, Deidi von Schaewen, 2013

For Colombian architect Simon Vélez (born 1949), botany has been inextricable from architecture. His work has been significantly determined by his country's tropical resources, in particular its lush vegetation and abundance of guadua bamboo--a common species throughout the valleys of Colombia. Working in close collaboration with the engineer-constructor Marcello Villegas, Vélez has devised bamboo buildings that are extraordinary not only in appearance but also in their structural simplicity, and in their suitability for scenarios in which construction tools and resources are minimal. Vélez has

so successfully popularized guadua bamboo that today even his wealthiest clients are commissioning luxury residences in this material formerly associated with peasant dwellings. He has also successfully persuaded numerous public administrations, town councils and businesses concerned about the environmental impact of their activities to adopt and promote guadua bamboo; he has designed bamboo buildings in Germany, France, the United States, Brazil, Mexico, China, Jamaica, Colombia, Panama, Ecuador and India. In this monograph, illustrated throughout by Deidi von Schaewen's photographs, author Pierre Frey guides us through a range of works by Vélez, examining his construction methods--in bamboo, steel and wood--as exemplifying a new kind of vernacular architecture.

The Jain Path Aidan Rankin, 2007
