**PreColumbian Textile Conference VII / Jornadas de Textiles PreColombinos VII** Lena Bjerregaard,Ann Peters,2017-11 From May 31st to June 4th, 2016, the 7th International European conference on pre-Columbian textiles was held in Copenhagen. This volume unites seven original articles on pre-Columbian textiles from Mexico, which compare information on 20th century finds first described by Alba Guadalupe Mastache with that from previously unpublished finds and recently discovered contexts. A unique chapter presents the technical analysis and replication of a pre-Columbian tunic recovered in a cave site in Arizona, at the northern margins of the Mesoamerican interaction sphere. Thirteen articles on archaeological textiles from the central Andes include analysis of both textile assemblages preserved in museum collections and those recovered during recent fieldwork in archaeological sites of the Andean desert coast. These include textile assemblages representing the Initial and Formative Periods, Paracas and Nasca contexts, the Middle Horizon, diverse late Intermediate Period assemblages and emblematic Inca garments.

Hollywood Foto-Rhetoric Bob Dylan,2012-12-25 The portrait of a very young Bob Dylan on the cover of 'The Times They Are a Changin' is probably one of the most recognizable and famous album covers of all time. Photographer Barry Feinstein took that photo, as well as many more of Dylan throughout his career. His images have been published throughout the world many times over, and have become synonymous with our perceptions of that place and time in rock and folk music history. Inspired by a series of photographs that Feinstein took in Hollywood during the 1950s and 60s, Bob Dylan wrote an extraordinary series of poems that have remained unpublished for decades. They are thought-provoking, witty and erudite observations of the world; through the lens of Feinstein's photographs, they speak volumes about the anonymous faces and places of Los Angeles, and offer wry commentary on images of stars and legends in the neighbourhood at the time. Photos of Frank Sinatra, Marlene Dietrich, Judy Garland float through the book, as do poignant images of starlets, casting couches, employment agencies and palm tree'd boulevards. Feinstein was there with a camera to capture some world-famous events, such as Marilyn Monroe's memorial service, and he photographed the forgettable moments, preserving them perfectly and timelessly. Bob Dylan's unsettling and distinctly unique perspective informs and enlivens every page, an irresistible interpretive voice narrating the visual images from photo to photo.

**Beyond Memory** Diane Neumaier,2004 Photography possesses a powerful ability to bear witness, aid remembrance, shape, and even alter recollection. In *Beyond Memory: Soviet Nonconformist Photography and Photo-Related Works of Art*, the general editor, Diane Neumaier, and twenty-three contributors offer a rigorous examination of the medium's role in late Soviet unofficial art. Focusing on the period between the mid-1950s and the late 1980s, they explore artists' unusually inventive and resourceful uses of photography within a highly developed Soviet dissident culture. During this time, lack of high-quality photographic materials, complimented by tremendous creative impulses, prompted artists to explore experimental photo-processes such as camera and darkroom manipulations, photomontage, and hand-coloring. Photography also took on a provocative array of forms including photo installation, artist-made samizdat (self-published) books, photo-realist painting, and many other surprising applications of the flexible medium. *Beyond Memory* shows how innovative conceptual moves and approaches to form and content-echoes of Soviet society's coded communication and a Russian sense of absurdity-were common in the Soviet cultural underground. Collectively, the works in this anthology demonstrate how late-Soviet artists employed irony and invention to make positive use of difficult circumstances. In the process, the volume illuminates the multiple characters of photography itself and highlights the leading role that the medium has come to play in the international art world today. *Beyond Memory* stands on its own as a rigorous examination of photography's place in late Soviet unofficial art, while also serving as a supplement to the traveling exhibition of the same title.

*Dictionary of Electronics* ,2012-12-06 The special interest in electronics all over the world is due to its decisive role in the scientific and technical progress now taking place in all fields of modern technology. Electronics also plays a decisive role in the development of science, providing as it does the technical basis for various scientific experiments. The role of electronics in the development of the world's culture also deserves a special mention. That is why it is hoped that the English-German French-Dutch-Russian Dictionary of Electronics, which contains some 9.000 entries and is jointly published by Kluwer Technische Boeken, B.V. (Deventer, Holland) and Ruski Yazyk Publishers (Moscow, USSR) will be favourably received. In accordance with existing international tradition, the term «electronics» covers several fields known in Soviet classification as electronics proper, radio engineering, and wire communication. The entries included in this dictionary have been selected in accordance with the international understanding of the term «electronics». One of the main difficulties encountered by the compilers was that although according to some calculations the number of terms used in special literature on electronics exceeds 50.000, the vocabulary of the dictionary had to be restricted to only 9.000 entries. Therefore this dictionary cannot claim to be comprehensive. Its purpose is to enable a wide range of specialists in various countries to find the English, German, French, Dutch, or Russian equivalents of the principal and most up-to-date terms in the field of electronics. Most attention has been paid to quantum electronics, fibre optics, optoelectronics, integrated circuit technology, radiolocation and radionavigation, pulse technique, holography, etc.

**The Equilibrium of Human Syntax** Andrea Moro,2013-09-13 This book assembles a collection of papers in two different domains: formal syntax and neurolinguistics. Here Moro provides evidence that the two fields are becoming more and more interconnected and that the new fascinating empirical questions and results in the latter field cannot be obtained without the theoretical base provided by the former. The book is organized in two parts: Part 1 focuses on theoretical and empirical issues in a comparative perspective (including the nature of syntactic movement, the theory of locality and a far reaching and influential theory of copular sentences). Part 2 provides the original sources of some innovative and pioneering experiments based on neuroimaging techniques (focusing on the biological nature of recursion and the interpretation of negative sentences). Moro concludes with an assessment of the impact of these perspectives on the theory of the evolution of language. The leading and pervasive idea unifying all the arguments developed here is the role of symmetry (breaking) in syntax and in the relationship between language and the human brain.
