The Medicalization of Society Peter Conrad, 2007-06-11 Over the past half-century, the social terrain of health and illness has been transformed. What were once considered normal human events and common human problems—birth, aging, menopause, alcoholism, and obesity—are now viewed as medical conditions. For better or worse, medicine increasingly permeates aspects of daily life. Building on more than three decades of research, Peter Conrad explores the changing forces behind this trend with case studies of short stature, social anxiety, male menopause, erectile dysfunction, adult ADHD, and sexual orientation. He examines the emergence of and changes in medicalization, the consequences of the expanding medical domain, and the implications for health and society. He finds in recent developments—such as the growing number of possible diagnoses and biomedical enhancements—the future direction of medicalization. Conrad contends that the impact of medical professionals on medicalization has diminished. Instead, the pharmaceutical and biotechnical industries, insurance companies and HMOs, and the patient as consumer have become the major forces promoting medicalization. This thought-provoking study offers valuable insight into not only how medicalization got to this point but also how it may continue to evolve.

Doing Health Anthropology Christie W. Kiefer, PhD, 2006-11-20 What is the relationship between health, human nature, and human needs? The impact of social change on communities? The processes by which communities confront and overcome their health problems? How do we study these health

questions in new communities and become advocates for change? These are critical questions in confronting the social causes of ill health, yet many health students do not have the appropriate training in the anthropological methods and techniques that help answer them. Christie Kiefer has written *Doing Health Anthropology* to prompt students to enter the community already prepared in these methods so that they can accurately ask and solve these important questions themselves. Using this book as a guide, students learn to integrate cultural anthropology with health science and come to their own conclusions based on field research. The book includes common pitfalls to avoid when conducting interviews and observations, and ways to formulate and answer research questions, maintain field notes and other records, and correctly analyze qualitative data. With the help of this text, practitioners and students alike will be able to integrate cultural anthropology methods of research into their health science investigations and community health initiatives. Patients and Healers in the Context of Culture Arthur Kleinman, 2023-04-28 From the Preface, by Arthur Kleinman: *Patients and Healers in the Context of Culture* presents a theoretical framework for studying the relationship between medicine, psychiatry, and culture. That framework is principally illustrated by materials gathered in field research in Taiwan and, to a lesser extent, from materials gathered in similar research in Boston. The reader will find this book contains a dialectical tension between two reciprocally related orientations: it is both a cross-cultural (largely anthropological) perspective on the essential components of clinical care and a clinical perspective on anthropological studies of medicine and

psychiatry. That dialectic is embodied in my own academic training and professional life, so that this book is a personal statement. I am a psychiatrist trained in anthropology. I have worked in library, field, and clinic on problems concerning medicine and psychiatry in Chinese culture. I teach cross-cultural psychiatry and medical anthropology, but I also practice and teach consultation psychiatry and take a clinical approach to my major cross-cultural teaching and research involvements. The theoretical framework elaborated in this book has been applied to all of those areas; in turn, they are used to illustrate the theory. Both the theory and its application embody the same dialectic. The purpose of this book is to advance both poles of that dialectic: to demonstrate the critical role of social science (especially anthropology and cross-cultural studies) in clinical medicine and psychiatry and to encourage study of clinical problems by anthropologists and other investigators involved in cross-cultural research.

The System of Objects Jean Baudrillard, 2020-04-07 The System of Objects is a tour de force—a theoretical letter-in-a-bottle tossed into the ocean in 1968, which brilliantly communicates to us all the live ideas of the day. Pressing Freudian and Saussurean categories into the service of a basically Marxist perspective, The System of Objects offers a cultural critique of the commodity in consumer society. Baudrillard classifies the everyday objects of the “new technical order” as functional, nonfunctional and metafunctional. He contrasts “modern” and “traditional” functional objects, subjecting home furnishing and interior design to a celebrated semiological analysis. His treatment of nonfunctional or “marginal” objects focuses on antiques and the psychology of collecting, while the metafunctional category extends to the useless, the aberrant and even the “schizofunctional.” Finally, Baudrillard deals at length with the

implications of credit and advertising for the commodification of everyday life. The System of Objects is a tour de force of the materialist semiotics of the early Baudrillard, who emerges in retrospect as something of a lightning rod for all the live ideas of the day: Bataille's political economy of "expenditure" and Mauss's theory of the gift; Reisman's lonely crowd and the "technological society" of Jacques Ellul; the structuralism of Roland Barthes in The System of Fashion; Henri Lefebvre's work on the social construction of space; and last, but not least, Guy Debord's situationist critique of the spectacle.

Excitable Speech Judith Butler, 2021-03-29 'When we claim to have been injured by language, what kind of claim do we make?' - Judith Butler, *Excitable Speech* *Excitable Speech* is widely hailed as a tour de force and one of Judith Butler's most important books. Examining in turn debates about hate speech, pornography and gayness within the US military, Butler argues that words can wound and linguistic violence is its own kind of violence. Yet she also argues that speech is 'excitable' and fluid, because its effects often are beyond the control of the speaker, shaped by fantasy, context and power structures. In a novel and courageous move, she urges caution concerning the use of legislation to restrict and censor speech, especially in cases where injurious language is taken up by aesthetic practices to diminish and oppose the injury, such as in rap and popular music. Although speech can insult and demean, it is also a form of recognition and may be used to talk back; injurious speech can reinforce power structures, but it can also repeat power in ways that separate language from its injurious power. Skillfully showing how language's oppositional power resides in its insubordinate and dynamic nature and its capacity to appropriate and defuse words that usually wound, Butler also seeks to account for why some clearly hateful

speech is taken to be iconic of free speech, while other forms are more easily submitted to censorship. In light of current debates between advocates of freedom of speech and ‘no platform’ and cancel culture, the message of *Excitable Speech* remains more relevant now than ever. This Routledge Classics edition includes a new Preface by the author, where she considers speech and language in the context contemporary forms of political polarization.

The Great Doctors Henry Ernest Sigerist, 1971

On Human Diversity Tzvetan Todorov, 1993 Tzvetan Todorov, an internationally admired scholar, aims in this book to salvage the good name of the Enlightenment so that its ideas can once more inspire humane thought and action. The question he poses is of urgent relevance to the conflicts of our age: How can we avoid the dangers of a perverted universalism and scientism, as well as the pitfalls of relativism? Since the French were the ideologues of universalism and played a preeminent role in the diffusion of Enlightenment ideas in Europe, Todorov focuses on the French intellectual tradition, analyzing writers ranging from Montaigne through Tocqueville, Michelet, and Renan, to Levi-Strauss. He shows how theories of human diversity were developed in the eighteenth century, and later systematically distorted.
