Getting Started with GEO, CouchDB, and Node.js Mick

Thompson, 2011-07-29 Today's mobile devices have GPS and standard APIs to give you access to coordinates—but what can you do with that data? With this concise book, application developers learn how to work with location data quickly and easily, using Node.js, CouchDB, and other open source tools and libraries. Node.js makes it simple to run event code on the Web, and the CouchDB document-oriented database lets you store location data and perform complex queries on it quickly. You'll learn how to get started with these tools, and then use them together to build an example project called MapChat, using HTML and JavaScript code samples. Learn how to serve dynamic content with Node.js, and use its asynchronous IO to handle several requests at once Become familiar with GeoJSON, Geohash, and the Geospatial Data Abstraction Library (GDAL) for working with spatial data Build geospatial indexes using the GeoCouch branch of CouchDB Combine these tools to build a project that lets users post real-time chat messages tagged with their current map location

Geo-Graphics Regina Giménez, 2022-05-24 Our universe is

brimming with secrets, and surprising curiosities. Here readers will learn the answers to all the questions they've asked themselves: What does the Sun look like from different planets in our galaxy? Why doesn't the Moon always appear the same? What is the largest river on Earth? And the highest mountain? In Geo-Graphics, our world becomes transformed by acclaimed artist Regina Giménez, into 96 pages of gorgeous shapes and colors. Planets and stars, continents and islands, rivers and lakes, volcanos and hurricanes ... here they are presented as circles, polygons, lines, spirals, and accompanying facts that explain the world around us. This special and unusual atlas is a marriage of science and art like no other.

Geo-Platinum 87 H.M. Prichard, Philip J. Potts, 2012-12-06 The

Geo-Platinum 87 Symposium, held at the Open University during April 1987, was designed as a forum for presentation of new research results on the occurrence, genesis, geochemistry, mineralogy and analysis of the platinum-group elements (PGE). With the support of the Open University and the Mineral Industry Research Organisation, the symposium was attended by 115 representatives of university departments, research institutions and members of the mining and mineral exploration industries. An introduction to the symposium was provided by two invited papers from C. J. Morrissey (Riofinex North) and C. R. N. Clark (Johnson Matthey) which were designed to give perspective to the goals of PGE research work. The first of these papers gave a provocative insight into the aims and objectives of an exploration manager, examining the influence of supply, demand and perceived world reserves on exploration strategy. The second invited paper gave a valuable view of the industrial uses, market trends and predicted changes in the commercial value of the platinum-group elements from the standpoint of a refining company and supplier. These invited papers are reproduced in this volume and are followed by twenty four full papers and twenty abstracts that reflect the wide range of research topics presented at the symposium.

La+ Geo Karen M'Closkey, 2020-11 GEO--Earth--is a word that simultaneously signifies something vast and elemental. It refers to both the planet on which we live and the soil that sustains us. GEO is the physical and representational bedrock of landscape architecture--the foundation of many disciplines from which we draw our knowledge. Geography, Geology, and Geometry, in particular, are fundamental to our discipline's intellectual core. And now, we seem ever more entangled in GEO as some scholars across the sciences and humanities argue that humans should be recognized as agents of change at geologic time scales. * Guest editors Karen M'Closkey and Keith VanDerSys explore site surveying and sensing technologies as

part of an expanded toolkit for landscape architects to bring environmental patterns down to earth and into view. * Designer Robert Gerard Pietrusko reveals the covert militaristic agendas of early aerial land cover interpretation.* Geographer Matthew W. Wilson revisits the rise of critical cartography within geography in the 1980s and '90s.* Media scholar Lisa Parks describes the politics of vertical mediation by recounting the importance of activists' use of drone-captured video to document both the protests against the construction of an oil pipeline through tribal lands, as well as the aggressive countermeasures taken by law enforcement to squelch the protests. * Jeffrey S. Nesbit and David Salomon, rocket launch pads provide a vehicle to unpack the relationship between terrestrial and extraterrestrial territories.* Geographers Douglas Robb and Karen Bakker caution against the voyeuristic tendencies enabled by the satellite gaze.* Through illustrated Geostories, Rania Ghosn imaginatively engages the global commons of outer space and oceans.* Designer Matthew Ransom examines the tension between grassroots organizations and fracking industries in Pennsylvania.* Author and activist Lucy R. Lippard takes us on an aerial journey across the United States.* Historian and geographer B.W. Higman traces our modern predilections towards flatness.* Through a remaking of Eugène Viollet-le-Duc's Mont Blanc studies, landscape architect Aisling O'Carroll exposes the imposition of geometric rationalization on nature. * Noah Heringman revisits the sublime in 18th-century landscape design, offering parallels to today's Anthropocene discourses about environmental depletion.* Shannon Mattern examines how rocks are collected, examined, and displayed as objects of spectacular brilliance - objects that ultimately reflect back on us by illuminating the histories of oppression embedded in their extraction.* LA+ GEO also includes interviews with the celebrated author of *After the Map*, William Rankin, author and citizen-sensing visionary Jennifer Gabrys, and New Zealand-based media artist and author Janine Randerson.

Leo Geo and His Miraculous Journey Through the Center of the Earth Jon Chad, 2012-03-13 An intrepid explorer climbs down, down, down the page as he voyages through the center of the earth in this unusually inventive comic adventure. Intrepid explorer Leo Geo is heading off on a mission into the unknown. With science as his sidekick, he intends to tunnel his way to the center of the earth. Of course, things never turn out quite the way you expect when you're burrowing your way through the earth's layers. Before long, Leo is forced to leave his tunneling machine behind, and he climbs, crawls, and falls to his destination while dodging giant centipedes, man-eating quadclops, and an evil army of subterranean malvisors bent on invading the surface. Kids will be drawn in by the unusual format of this inventive comic, following Leo as he climbs deeper and deeper into a very long and skinny book—and they may just learn a few things about geology as they go.

Geo-Information Technology in Earth Resources Monitoring and Management Varun Narayan Mishra, Praveen Kumar Rai, Prafull Sigh, 2021 Earth resources are the precious assets that provide living space for human beings. In the last few decades, the pressure on earth resources has increased due to anthropogenic activities and rapid industrialization. The

sustainable management of earth resources requires reliable, accurate, and timely information at different observational scales. Geo-information technology is an efficient tool for acquiring information required for environmental protection, earth resources monitoring, and addressing the issues associated with sustainable development and management. It offers an influential and capable tool for mapping, monitoring, modeling, and management of earth resources. Many researchers have reported their findings and operational applications of direct relevance to the management of earth resources with the launch of imaging satellites in the 1970s. However, few studies have been reported to understand the core science and research basics, as there are larger issues of capacity building to use geo-information technology in sustainable development and management of earth resources. There is also a fundamental gap between the theoretical concepts and the operational use of these advanced tools. This could be resolved by providing a broad range of applications of this technology to the scientific and research community in the field of geospatial technologies and allied subjects. This book, entitled *Geo-Information Technology in Earth Resources Monitoring and Management*, deals with the challenges for sustainable management and development of earth resources with a focus on India and other countries around the world. The chapters are written by prominent academicians, researchers, and experts in the field of geo-information technology and related subjects. This book is a collection of chapters providing a multi-disciplinary overview for academicians, researchers, scientists, administrators, policymakers, social scientists, and professionals involved in the various aspects of earth resources development, planning, and management. The aim of this book is to replenish the gap in the available literature on the subject by bringing together the concepts, theories, and experiences of specialists and professionals in this field--

Introduction to Integrated Geo-information Management

Sepp Cassettari, 2012-12-06 This book was inspired by the revolution in geographical information systems during the late 1970s and 1980s which introduced to many the concept of computer-based information systems for spatially referenced data. The map, the aerial photograph and the satellite image were wedded to a database of textual information through the rapidly developing technology of powerful graphics workstations. This brought the skills of the geographer to a wide range of disciplines and specialists. But this book is not about the basic concepts of geographical information systems themselves. It is not about hardware or software per se, nor the integral concepts of geo-referenced data handling built into such systems; these are to be found in a growing number of introductory texts on the subject. Instead the focus of this book is on geo-information management. the much wider issues While an understanding of the systems, their capabilities and limitations is necessary, of greater importance to the long term application of geographical understanding to problem solving is the wider context of information handling. Spatial data are becoming increasingly important in understanding the issues that confront the world. Chapter 1 is a discussion of the general issues which relate to management and information systems. It concludes with review of spatial decision support systems which are of increasing importance to the GIS community.

Geo-Spatial Technologies in Urban Environments Ryan R.

Jensen, Jay D. Gatrell, Daniel McLean, 2007-05-11 This book expands the current frame of reference of remote sensing and geographic information specialists to include an array of socio-economic and related planning issues. Using remotely sensed data, the project explores the efficacy and policy implications of new approaches toward analyzing data, integrates approaches from human geography and explores the utility of employing geo-technologies to further the politics of local growth and smart

growth coalitions, as in green space programs.

Geo ,1981

A History of Spaces John Pickles,2004 It also considers the use of maps for military purposes, maps that have coded modern conceptions of health, disease and social character, and maps of the transparent human body and the transparent earth. The final chapters of the book turn to the rapid pace of change in mapping technologies, the forms of visualization and representation that are now possible, and what the author refers to as 'the possibilities for post-representational cartographies'.--Jacket.

Siam Mapped Thongchai Winichakul,1997-06-30 This unusual and intriguing study of nationhood explores the 19th-century confrontation of ideas that transformed the kingdom of Siam into the modern conception of a nation. Siam Mapped challenges much that has been written on Thai history because it demonstrates convincingly that the physical and political definition of Thailand on which other works are based is anachronistic.

Geo-data John McCoy,2003 Contains alphabetically arranged entries that describe the physical geography of 207 countries or dependencies, each with a relief map, a collection of key facts, an overview of geography and geology, discussion of specific geographic features, a look at human population, and a list of further readings.

Geological and Geo-Environmental Processes on Earth

Arun Kumar Shandilya, Vinod Kumar Singh, Suresh Chandra Bhatt, Chandra Shekhar Dubey, 2021 This edited volume dedicated to late Prof. P.S. Saklani addresses the multidisciplinary themes pertaining to role of tectonism and magmatism in Crustal Evolution and global distribution of metallic and non metallic mineral deposits. It gives valuable information on geodynamic evolution, structural, petrological, isotopic, metamorphic, geochemical and geochronological attributes of continental and oceanic crust and is challenging reassessments of the existing paradigms. It addresses the implication of magmatism, metallogeny and application of geochronological ages (U-Pb SHRIMP age, Lu-Hf isotopic system; detrital zircons). This book also advocates the role of tectonics in contamination of ground water, and control on drainage pattern and geothermal systems. It explores the vulnerability of earth towards natural hazards viz. earthquakes, floods, cyclones, tsunamis, volcanism, cyclones and drought. This volume throws light on the applications of remote sensing, GIS (Geographical Information System) and SRTM data for evaluation of the morphometric and morphotectonic parameters and exploring the susceptibility of river basins toward erosion and flood. It will be beneficial to graduate and post-graduate students as well as professionals and researchers.

Global Environment Outlook – GEO-6: Healthy Planet, Healthy People UN Environment, 2019-06-06 Published to coincide with the Fourth United Nations Environmental Assembly, UN Environment's sixth Global Environment Outlook calls on decision
