Green Power Charles Vrooman,2007-10 After the renowned microbiologist Dr. Ray Pendleton leads a demonstration to close down Rancho Seco Nuclear Power Plant, Ray is assaulted by two of Dirk Hendricksonas fellow Delta Valley militiamen. Ray survives the beating and is motivated to set up methane digesters as an alternative source of electrical power for Lodi dairies. Dirkas continued attacks on the professor and his projects result in a life-threatening epidemic pointing to one of Rayas methane lagoons as the cause. The infected patients are admitted to UC Davis Medical Center. Linda McCord, a lab tech at the hospital and former student of Dr. Pendleton, works with Ray to hopefully prove that the methane power source is not the cause of this spreading disease. Both Ray and Linda develop a romantic relationship while working together. Linda is devastated when Ray develops a serious infection from the bacterium causing the epidemic.

Brown,Janet Larsen,Bernie Fischlowitz-Roberts,2013-10-31 In this study, the award-winning environmental analyst Lester Brown and his colleagues have charted progress in building the eco-economy – an economy in harmony with the Earth's ecosystems, not undermining them. This edition of the biennial reader highlights 12 key trends, from population growing by 80 million annually, to ice melting, to the boom in use of solar cells. It explains, for example, why wind-generated electricity is emerging as the foundation of the new post-fossil fuel energy economy. It also specifically investigates China's desertification problem, the issues surrounding food production, and the challenge of controlling climate change. Drawing on research and analysis by the Earth Policy Institute, the reader monitors the shift from the old economy to the new.

Green power already out of breath? Why do German consumers not switch to green electricity? Sarah Herz,2014-02-01 The following investigation provides a profound analysis on the motives that hinder German consumers from shifting to green power vendors. While academic research provides many potential reasons, only a few investigations have so far dealt with internal and external influences on switching behavior as well as actual compliance with theoretical models. In this context, a

survey has been undertaken in the Federal State of Mecklenburg-West-Pomerania to analyze the personal relevance of different motives for consumers. Furthermore, the survey also aimed at analyzing the compliance of theoretical criteria, provided by the Norm Activation Model, and the Theory of Planned Behavior in order to see whether respondents intend to switch after all. Therefore, the survey was distributed via the snowball system, and has been completed by 115 respondents, providing data on 77 respondents who still consume conventional power.

Green Power Joao Neiva de Figueiredo, Mauro F. Guillén, 2014-02-05 Green Power: Perspectives on Sustainable Electricity Generation provides a systematic overview of the current state of green power and renewable electrical energy production in the world. Considers China's energy profile and what is being done to reduce the country's reliance on coal Describes the cultural foundations and institutional environment that gave birth to Germany's energy revolution Supplies an overview of the renewable energy sector in Spain and analyzes its future prospects in light of recent economic difficulties Reports on French Polynesia's progress in its quest to generate half of its electricity from renewable sources by 2020 Investigates the feasibility of biomass as a large-scale electricity generation option Explores the vision of power generation in space that could solve mankind's energy needs permanently By illustrating the experiences of other nations, the book outlines valuable lessons learned and best practices that can be extremely helpful to other countries as they seek a greener energy profile. Supplying a timely overview of renewable and non-renewable electric power sources, it provides in-depth analysis of the key factors that affect success. It also identifies practices that have been precursors to failure so you can avoid making the same mistakes in your quest to contribute to the long-overdue advancement of green energy.

The Impact of EPA's Green Power Purchases Joseph F. DeCarolus, 2007 All federal agencies, including EPA, are required under Executive Order (EO) 13123 to reduce life-cycle greenhouse gas emissions attributed to facility energy use by 30% below 1990 levels by 2010. A key approach to reducing facility greenhouse gas emissions, employed by EPA's Office of Administration and Resources Management (OARM), involves the purchase of green power. Green power generally includes renewables (wind, solar, biomass) and other clean energy technologies (municipal solid waste and landfill gas) that generate electricity. Green tags, which represent the positive environmental attributes associated with electricity production from green power sources, are sold through markets to electricity consumers. The analysis presented in this report meets the following three objectives: (1) establish the 1990 EPA emissions baseline in order to assess progress towards fulfillment of EO 13123, (2) examine the impact of EPA's green power purchasing on facility-related greenhouse gas emissions and air pollution, and (3) develop a strategy for future green power purchases. In order to achieve these objectives, this report describes a new method to estimate net emissions of CO₂, SO₂, NO_x, and Hg. The estimation of net facility emissions is complicated by the purchase of green tags because it requires detailed knowledge of which conventional power plants are being offset by purchased green power. Different offset scenarios are analyzed in order to quantify the uncertainty inherent in estimating emissions offsets without hour-by-hour system dispatch data.

The Green Power of Socialism Elena Kochetkova, 2024-02-20 How the Soviet forestry industry developed a unique form of industrial ecology—a commonsense approach toward natural resources for the economy and society. In *The Green Power of Socialism*, Elena Kochetkova examines the relationship between nature and humans under state socialism by looking at the industrial role of Soviet forests. The book explores evolving Soviet policies of wood consumption, discussing how professionals working in the forestry industry of the Soviet state viewed the present and future of forests by considering them both a natural resource and a trove of industrial material. When faced with the prospect of wood shortages, these specialists came to develop new industry-ecology paradigms. Kochetkova looks at the materiality of Soviet industry through forests and wood to show how, paradoxically, industrial ecology emerged and developed as a by-product of the Soviet industrialization project. *The Green Power of Socialism* also discusses how post-Soviet industry has abandoned these socialist practices and the idea of nature as a complicated ecosystem that provides a crucial service to society. Emphasizing the technological and environmental impacts of the Cold War, Kochetkova critically reconsiders two explanatory models that have become dominant in the historiography of Soviet approaches to nature over the last decades—ecocide and environmentalism. Within the context of the current environmental crisis, the book invites readers to reevaluate state socialism as a complex phenomenon with sophisticated interactions between nature and industry. In so doing, it contributes a fresh perspective on the activities of socialist experts and their view of nature, shedding light on Soviet state industrial and environmental policy and its continuing legacy in the present day.
