*Predictive Approaches to Control of Complex Systems* Gorazd Karer,Igor Škrjanc,2012-09-20 A predictive control algorithm uses a model of the controlled system to predict the system behavior for various input scenarios and determines the most appropriate inputs accordingly. Predictive controllers are suitable for a wide range of systems; therefore, their advantages are especially evident when dealing with relatively complex systems, such as nonlinear, constrained, hybrid, multivariate systems etc. However, designing a predictive control strategy for a complex system is generally a difficult task, because all relevant dynamical phenomena have to be considered. Establishing a suitable model of the system is an essential part of predictive control design. Classic modeling and identification approaches based on linear-systems theory are generally inappropriate for complex systems; hence, models that are able to appropriately consider complex dynamical properties have to be employed in a predictive control algorithm. This book first introduces some modeling frameworks, which can encompass the most frequently encountered complex dynamical phenomena and are practically applicable in the proposed predictive control approaches. Furthermore, unsupervised learning methods that can be used for complex-system identification are treated. Finally, several useful predictive control algorithms for complex systems are proposed and their particular advantages and drawbacks are discussed. The presented modeling, identification and control approaches are complemented by illustrative examples. The book is aimed towards researches and postgraduate students interested in modeling, identification and control, as well as towards control engineers needing practically usable advanced control methods for complex systems.

Discount Casey Gray,2015-04-14 Set in the American Southwest, Casey Gray's ambitious tragicomic debut novel follows a group of customers and employees through the twenty-four hour work cycle inside a classic American institution—The Superstore. With a cast of characters including Ernesto, a local gang member struggling to choose his day job over a desultory life as a drug dealer; Wilma, a grandmother working double shifts to support her family; and Keith, a high school student with a penchant for filmmaking, Gray offers a humane and contemporary portrait of life on the suburban fringe. Discount is a triumphant and big-hearted novel you won't soon forget.

*Agents for Games and Simulations* Frank Dignum,Jeffrey Bradshaw,Barry G. Silverman,Willem van Doesburg,2009-12-21 Research on multi-agent systems has provided a promising technology for implementing cognitive intelligent non-playing characters. However, the technologies used in game engines and multi-agent platforms are not readily compatible due to some inherent differences in concerns. Where game engines focus on real-time aspects and thus propagate efficiency and central control, multi-agent platforms assume autonomy of the agents. Increased autonomy and intelligence may offer benefits for a more compelling gameplay and may even be necessary for serious games. However, problems occur when current game design techniques are used to incorporate state-of-the-art multi-agent system technology. A very similar argument can be given for agent-based (social) simulation. This volume contains the papers presented at AGS 2009, the First International Workshop on Agents for Games and Simulations, held in Budapest on May 11, 2009. The focus of the workshop was on the particular challenges facing those using agent technology for games and simulations, with topics covering the technical, conceptual and design aspects of the field.

**Algebraic Approaches to Program Semantics** Ernest G. Manes,Michael A. Arbib,2012-12-06 In the 1930s, mathematical logicians studied the notion of effective comput ability using such notions as recursive functions, A-calculus, and Turing machines. The 1940s saw the construction of the first electronic computers, and the next 20 years saw the evolution of higher-level programming languages in which programs could be written in a convenient fashion independent (thanks to compilers and interpreters) of the architecture of any specific machine. The development of such languages led in turn to the general analysis of questions of syntax, structuring strings of symbols which could count as legal programs, and semantics, determining the meaning of a program, for example, as the function it computes in transforming input data to output results. An important approach to semantics, pioneered by Floyd, Hoare, and Wirth, is called assertion semantics: given a specification of which assertions (preconditions) on input data should guarantee that the results satisfy desired assertions (postconditions) on output data, one seeks a logical proof that the program satisfies its specification. An alternative approach, pioneered by Scott and Strachey, is called denotational semantics: it offers algebraic techniques for characterizing the denotation of (i. e. , the function computed by) a program-the properties of the program can then be checked by direct comparison of the denotation with the specification. This book is an introduction to denotational semantics. More specifically, we introduce the reader to two approaches to denotational semantics: the order semantics of Scott and Strachey and our own partially additive semantics.

What Mama Said Osonye Tess Onwueme,2003 Renowned playwright Osonye Tess Onwueme's powerful new drama illuminates the effect of national and global oil politics on the lives of impoverished rural Nigerians. What Mama Said is set in the metaphorical state of Sufferland, whose people are starving and routinely exploited and terrorized by corrupt government officials and multinational oil companies-that is, until a voice erupts and moves the wounded women and youths to rise up and demand justice. Onwueme's powerful characters and vibrant, emotionally charged scenes bring to life a turbulent movement for change and challenge to tradition. Aggrieved youths and militant women-whose husbands and sons work in the refineries or have been slaughtered in the violent struggle-take center stage to drum their pain in this drama about

revolution. Determined to finally confront the multinational forces that have long humiliated them, Sufferland villagers burn down pipelines and kidnap an oil company director. Tensions peak, and activist leaders are put on trial before a global jury that can no longer ignore the situation. What Mama Said is a moving portrayal of the battle for human rights, dignity, compensation, and the right of a nation's people to control the resources of their own land.

**Automatic Modeling and Fault Diagnosis of Timed Concurrent Discrete Event Systems. Automatische Modellierung und Fehlerdiagnose zeitlicher nebenläufiger ereignisdiskreter Systeme** Stefan Schneider,2015-05-29 The productive operation of machines and facilities is of great economic importance for industrial companies. In order to achieve high productivity, unscheduled production downtimes induced by faults need to be minimized. In this work, an approach for modelbased fault diagnosis of timed concurrent Discrete Event Systems is proposed that can contribute to this aim. The models are automatically determined by timed identification and partitioning. These approaches allow for efficient modeling of large and complex industrial systems with concurrent behavior requiring only little system knowledge. The work explains the theoretical and practical aspects of the presented approaches and gives a detailed evaluation based on a laboratory manufacturing system.
