Tumor Microenvironment: Cellular, Metabolic and Immunologic Interactions Debabrata

Banerjee,Raj K. Tiwari,2021-12-09 Over the past decade, the tumor microenvironment has become one of the most important research areas in cancer biology, as cells within the tumor microenvironment, despite being outnumbered by healthy cells, are able to evade surveillance and immune-mediated destruction. While researchers have learned a great deal about the cellular and structural makeup of the tumor microenvironment, there has been a growing understanding of the metabolic interplay between the tumor microenvironment's various cellular constituents and how each of them contributes to overall tumor growth and metastases. This new volume will guide researchers, students, oncologists and academics through a rapidly developing and changing field with a thorough understanding of tumor microenvironment biology from a cellular, structural, metabolic, and immunological perspective.

Paul's Fundamental Immunology Martin Flajnik, 2022-07-19 Selected as a Doody's Core Title for 2022! Defining the field of immunology for 40 years, Paul's Fundamental Immunology continues to provide detailed, authoritative, up-to-date information that uniquely bridges the gap between basic immunology and the disease process. The fully revised 8th edition maintains the excellence established by Dr. William E. Paul, who passed away in 2015, and is now under new editorial leadership of Drs. Martin F. Flajnik, Nevil J. Singh, and Steven M. Holland. It's an ideal reference and gold standard text for graduate students, post-doctoral fellows, basic and clinical immunologists, microbiologists and infectious disease physicians, and any physician treating diseases in which immunologic mechanisms play a role.

Translating tolerogenic therapies to the clinic - where do we stand and what are the barriers? Stephen P. Cobbold, Xian C. Li, This Research Topic is a call for papers to provide an up to date assessment of current attempts to introduce tolerogenic therapies into clinical practice. Tolerance has been a highly sought after goal in the field of organ transplantation for over half a century, and is now readily achievable in rodent models, but considerable barriers remain to successfully translating tolerogenic treatments to the clinic. The initial call for this Research Topic

has been aimed to provide an overview of recent advances made within the European RISE and American ITN networks with regard to tolerogenic strategies in clinical transplantation, autoimmune disease, and allergy. Articles will also cover the barriers to clinical tolerance induction and new emerging approaches to overcome such barriers. 1. Collaborative networks working towards the goal of therapeutic tolerance induction 2. Proper tolerance and minimization of immunosuppression 3. Lessons from operationally tolerant patients 4. Targeted withdrawal of immunosuppression 5. Stem cells and hematopoietic chimerism as a route to tolerance 6. Promoting regulatory T cells 7. Tolerogenic dendritic cells and negative vaccination 8. Inhibitory pathways and mechanisms in tolerance 9. Memory T cells and heterologous immunity 10. The innate response to allotransplants 11. Chronic graft loss--what are the missing links? 12. The impact of graft microenvironment on tolerance

Rodent Transplant Medicine Weihua Gong, 2014-10-20 This book introduces transplantation in rodents as useful tools used in studying transplant immunobiology. Several solid organs (kidney, heart, liver) transplant models in rodents are described in this book. It can help surgical quality and save surgical time. The first part of the book provides a review of rodent transplant tolerance induction, the role of gender and body-weight in rodent transplantation, surgical instruments and organ preservation solutions. In the second part of the book, various organ-transplantation techniques in rodents are discussed in individual chapters. This book presents uniform surgical procedures in mouse and rats, which produce comparable data, efficiently enhancing the translational research from bench to non-human primates and beyond. It will be of great value to transplant researchers, research fellows and clinicians in many surgical specialties.

TNFRSF Agonists: Mode of action and therapeutic opportunities Nataša Obermajer,Harald Wajant,Adam Zwolak,2023-12-04 The receptors of the TNFRSF (TNFRs) are of overwhelming importance in the regulation of the immune system but are also involved in the induction of apoptotic cell death or cell survival and proliferation, making them excellent therapeutic targets for cancer but also other diseases. TNFRSF members provide crucial co-stimulatory signals to many if not all immune effector cells. Each co-stimulatory TNFR has a distinct expression profile and a unique functional impact on various types of cells and at different stages of the immune response. For example, the two receptors of TNF, TNF receptor-1 (TNFR1) and TNF receptor-2 (TNFR2), regulate the interaction of the various types of immune cells and also the interplay of the latter with practically any type of non-hematopoietic cells; CD40 stimulates antigen-presenting cells; CD27, OX40, 41BB,GITR, HVEM and RANK costimulate T cells; BCMA, TACI, and BaffR regulate B-cell maturation; CD95 and the two death receptors of TRAIL contribute to tumor surveillance and Fn14, EDAR and XEDAR have been implicated in tissue regeneration and development. Correspondingly, exploiting TNFR-mediated signaling for the therapy of cancer but also of non-cancerous diseases is a major field of interest. A further application of TNFRSF signaling is the incorporation of the intracellular co-stimulatory domain of a TNFRSF receptor into so-called Chimeric Antigen Receptor (CAR) constructs for CAR-T cell therapy, the most prominent example of which is the 4-1BB co-stimulatory domain included in the clinically approved product Kymriah. The goal of this research

topic is to provide concise overview of the recent advances in our understanding of agonists targeting TNFRSF and their potential therapeutic use, in particular in cancers. The focus of the series of research and review articles includes but is not limited to the biology of TNFRSF receptors in distinct immune cell populations, structure-function relationship of TNFRSF agonists, current preclinical and clinical knowledge of co-stimulatory TNFR agonists, opportunities for next generation TNFRSF therapeutics alone or in combination with immune checkpoint molecules. We encourage the submission of original research articles supported by pre-clinical data. Review articles will also be considered. Data should consist of anti-tumor activity analyses encompassing various murine or humanized mouse models, assessment of TNFRSF targeting in translational ex vivo primary human tumor tissue settings, or innovative single cell or spatial analysis of TNFRSF expression and association with tumor progression in patient material. Submissions should not be limited to the in vitro evaluation of TNFRSF signaling. We expect submissions based on (but not limited to):

- TNFRSF signaling in shaping the immune contexture for anti-tumor immunity.
- Engaging cytotoxic TNFRSF signaling to treat cancer.
- Engaging TNFRSF signaling in non-cancerous diseases.
- Immunobiology of TNFRSF receptors in specific immune cell populations, eg regulatory T cells (TNFR2, 41BB, TNFRSF25, ..), dendritic cells (CD40, RANK ...), NK cells ...
- Critical aspects of TNFRSF structure-function and receptor clustering .
- Balancing agonistic strength with FcγR affinity in the context of opportunities for next generation anti-TNFR antibodies with improved pharmacologic properties.
- TNFRSF-based agonists with conditional or constitutive agonism.
- Potential of simultaneous blockade of immune checkpoint molecules and co-stimulation of the TNFRSF in improving anti-tumor immunity.
- Bispecific TNFR agonists.
- anti-TNF-α agents in cancer immunotherapy.
- Prominence and key features of TNFRSF members (4-1BB, OX40, CD27,

CD40, HVEM, and GITR) as co-stimulatory domains in CAR-T cell therapy . • Current preclinical and clinical knowledge of co-stimulatory TNFR antibodies. Topic Editor Nataša Obermajer is a full time employee and shareholder of Janssen R&D, LLC, one of the Janssen Pharmaceutical Companies of Johnson & Johnson. Topic Editor Dr. Adam Zwolak is employed by Janssen R&D; The University of Würzburg has filed patent applications for TNFR2, Fn14 and CD40 agonists and bispecific anti-TNFR antibody formats with conditional activity with Dr. Harald Wajant as co-inventor. The University of Würzburg receives funding from Dualyx NV for the development of TNFR2 agonists

Hvem Er Hvem? 1973 B. Steenstrup, 1973

Biological Electron Microscopy Michael J. Dykstra, Laura E. Reuss, 2003-12-31 Electron microscopy is frequently portrayed as a discipline that stands alone, separated from molecular biology, light microscopy, physiology, and biochemistry, among other disciplines. It is also presented as a technically demanding discipline operating largely in the sphere of black boxes and governed by many absolute laws of procedure. At the introductory level, this portrayal does the discipline and the student a disservice. The instrumentation we use is complex, but ultimately understandable and, more importantly, repairable. The procedures we employ for preparing tissues and cells are not totally understood, but enough information is available to allow investigators to make reasonable choices concerning the best techniques to apply to their particular problems. There are countless

specialized techniques in the field of electron and light microscopy that require the acquisition of specialized knowledge, particularly for interpretation of results (electron tomography and energy dispersive spectroscopy immediately come to mind), but most laboratories possessing the equipment to effect these approaches have specialists to help the casual user. The advent of computer operated electron microscopes has also broadened access to these instruments, allowing users with little technical knowledge about electron microscope design to quickly become operators. This has been a welcome advance, because earlier instruments required a level of knowledge about electron optics and vacuum systems to produce optimal photographs and to avoid crashing the instruments that typically made it difficult for beginners.
