Ring-opening Polymerisation N. Spassky,1995 The general features of ring-opening polymerisation, for example the dependence of polymerisability upon ring-strain, the significance of ring-chain equilibria, and the potential for formation of cyclic oligomers are outlined. An additional indexed section containing several hundred abstracts from the Rapra Polymer Library database provides useful references for further reading.

**Rubber Mixing** P. R. Wood,1996 This report describes the current state of the art in mixing in the rubber industry from a practical and essentially technological viewpoint. An additional indexed section containing several hundred abstracts from the Rapra Polymer Library database provides useful references for further reading.

**Polymer Supported Chemical Reactions** P. Hodge,1991 Polymer supported chemical reactions may include those using supported substrates, reagents and catalysts, and this report describes all three types. In all cases the most frequent reason for the use of a polymeric support will be the ease of separation of the supported and the low molecular c099 species. An additional indexed section containing several hundred abstracts from the Rapra Polymer Library database provides useful references for further reading.

**Plastics in Thermal and Acoustic Building Insulation** V.L. Kefford,1993 This report describes in detail the properties demanded of thermal insulation, the types of polymers which may be used, and the kinds of plastics products available for insulating external and internal walls, pitched and flat roofs, and floors. Efficiency and cost comparisons are made with traditional materials. An additional indexed section containing several hundred abstracts from the Rapra Polymer Library database provides useful references for further reading.

**Blends and Alloys of Engineering Thermoplastics** H.T.Van De Grampel,1991-12

Reactive Processing of Polymers M.W.R. Brown,A. F. Johnson,P. D. Coates,1994 Developments in machinery, materials and applications are outlined in the cond104 of commercial considerations and advances in fundamental understanding. The principles and benefits of polymer modification and blending via reactive extrusion are explained. A b257 of novel techniques which have developed out of the major reactive processes are also described. An additional indexed section containing several hundred abstracts from the Rapra Polymer Library database provides useful references for further reading.

**Advances in Tyre Mechanics** R. A. Ridha,M. Theves,1994 The pneumatic tyre is a complex structure which performs a variety of functions essential to the effective operation of most vehicles. The performance of a tyre can be considered in terms of a b257 of criteria; durability, tread wear, noise, energy consumption (rolling resistance), vibrations and traction. In this report the authors review recent advances in all these areas. An additional indexed section containing several hundred abstracts from the Rapra Polymer Library database gives useful references for further reading.

Polymeric Seals and Sealing Technology J. A. Hickman,1997 This report surveys the main types of seal, static and dynamic as well as those with more specific applications such as pneumatic and diaphragm seals. It then goes on to look at seal manufacture and the range of polymeric materials available for use in seal design from natural rubber and EPM to fluorosilicone rubbers and PTFE, providing data on their maximum and minimum usage temperatures. An additional indexed section containing several hundred abstracts from the Rapra Polymer Library database provides useful references for further reading.

*Advances in Thermoforming* J. L. Throne,1997 This review provides a brief discussion of the thermoforming process, including its historical development and machinery and material requirements. An additional indexed section containing several hundred abstracts from the Rapra Polymer Library database provides useful references for further reading.

*Coextrusion* D. Djordjevic,1992 This report reviews sheet and profile extrusion, wire and cable coating and co-injection, describing both the rheological and structural considerations and the design and selection of machinery. Problems of layer instability and the c094 of layer c098 are addressed, as well as the selection of polymers and the recyclability of coextruded scrap. An additional indexed section containing several hundred abstracts from the Rapra Polymer Library database provides useful references for further reading.

**Physical Testing of Rubber** R. P. Brown,1992 Reasons for testing rubber materials and products fall into four categories: quality control, provision of design data, prediction of service performance and investigation of failure. Test methods have been standardised for almost all properties likely to be relevant to rubbers, and the appropriate standards are listed in this report. An additional indexed section containing several hundred abstracts from the Rapra Polymer Library database provides useful references for further reading.

*Advances in Biodegradable Polymers* G. F. Moore,S. M. Saunders,1998-02 In this report the factors which influence biodegradation are first explained. Methods of testing and evaluating biodegradation are then described and compared. The principles, relative costs and practical applications of specific tests are outlined together with the position with respect to recognised standards. The range of biodegradable polymers and polymer blends is then described, including natural and synthetic products. An additional indexed section containing several hundred abstracts from the Rapra Polymer Library database provides useful references for further reading.

*Composites* N. G. Brain,1991-12

Food Contact Polymeric Materials J.A. Sidwell,1992 Polymeric materials have revolutionised the way we package store and even cook our food. We now buy soft and alcoholic drinks in transparent, lightc099 plastic bottles, and precooked meals in plastic trays which we reheat in a microwave or conventional oven. This state-of-the-art review draws together the legal framework within which the industry must work, with the technological advances being made both in materials performance and the analysis of migrating monomers and additives. An additional indexed section containing several hundred abstracts from the Rapra Polymer Library database provides useful references for further reading.
