Dictionnaire du faisceau dialectal arabe andalou Federico Corriente,2017-01-11 Detailed accounts of the lexical constituent of any language, to which the grammatical array of rules is added in order to produce correct utterances, are a must in applied linguistic description, as only they allow the thorough retrieval of information contained therein. In the case of ‘dead’ languages or dialects, works of this nature are even more necessary, as there is no possibility of eliciting information from natives. This is the case of Andalusí Arabic, practised in the Iberian Peninsula between the eighth and seventeenth centuries and a vehicle of an interesting folk literature, in prose and poetry, as well as of some legal deeds and personal letters with historical allusions of great value. These materials have been surveyed since the nineteenth and mainly during the twentieth century; however, the interest for such studies appears to have abated in recent decades, while a definitive assessment of their contribution to linguistics, literature and history has not yet been produced. Therefore, this dictionary will be helpful to scholars working on those fields from both the viewpoints of Western European and Western Islamic studies.

Adaptive and Multilevel Metaheuristics Carlos Cotta,Marc Sevaux,Kenneth Sörensen,2008-06-17 One of the keystones in practical metaheuristic problem-solving is the fact that tuning the optimization technique to the problem under consideration is crucial for achieving top performance. This tuning/customization is usually in the hands of the algorithm designer, and despite some methodological attempts, it largely remains a scientific art. Transferring a part of this customization effort to the algorithm itself -endowing it with smart mechanisms to self-adapt to the problem- has been a long pursued goal in the field of metaheuristics. These mechanisms can involve different aspects of the algorithm, such as for example, self-adjusting the parameters, self-adapting the functioning of internal components, evolving search strategies, etc. Recently, the idea of hyperheuristics, i.e., using a metaheuristic layer for adapting the search by selectively using different low-level heuristics, has also been gaining popularity. This volume presents recent advances in the area of adaptativeness in metaheuristic optimization, including up-to-date reviews of hyperheuristics and self-adaptation in evolutionary algorithms, as well as cutting edge works on adaptive, self-adaptive and multilevel metaheuristics, with application to both combinatorial and continuous optimization.

Gene Families Guoxiong Xue,2001 This archival volume is an invaluable collection of rigorously reviewed articles by experts in the fields of gene families, DNA, RNA and proteins, to commemorate the passing of a giant of science OCo Professor Clement L Markert (1917OCo1999). In 1959, Clement Markert and Freddy Moller developed the concept of the isozyme, which paved the way for extensive studies of enzyme, protein and gene multiplicity across all living organisms. This important scientific discovery has had a profound influence on the biological sciences for more than 40 years, and has provided the basis for regular international meetings to discuss the biological and biomedical implications of enzyme multiplicity. More recently, this concept has been extended to a wide range of gene families of DNA, RNA, proteins and enzymes. Contents: Clement Markert (G L Hammond); Identification of Novel Gene Family Members Based on Efficient Full-Length cDNA Cloning (J Gu et al.); Aldehyde Dehydrogenases of Human Corneal and Lens Epithelial Cells (R S Holmes); X-Chromosome Inactivation During Spermatogenesis: The Original Dosage Compensation Mechanism in Mammals? (J R Mc Carrey); Probing for the Basis of the Low Activity of the Oriental Variant of Liver Mitochondrial Aldehyde

Dehydrogenase (B Wei & H Weiner); The Roles of Carbonic Anhydrase Isozymes in Cancer (W R Chegwiddden et al.); MHC Class II Suppression by Trophoblast cDNAs (G L Hammond et al.); Molecular Information Fusion for Metabolic Networks (R Hofestndt et al.); Effect of Heterogeneous Sperm and Hybridization of DNA Fragment in Allogynogenetic Silver Crucian Carp (D Xia et al.); Gene Expression During Carrot Somatic Embryogenesis (N Wu); and other papers. Readership: Graduate students, post-docs and experts interested in gene families.

Numerical Modeling of Nanoparticle Transport in Porous Media Mohamed F. El-Amin,2023-06-17 Numerical Modeling of Nanoparticle Transport in Porous Media: MATLAB/PYTHON Approach focuses on modeling and numerical aspects of nanoparticle transport within single- and two-phase flow in porous media. The book discusses modeling development, dimensional analysis, numerical solutions and convergence analysis. Actual types of porous media have been considered, including heterogeneous, fractured, and anisotropic. Moreover, different interactions with nanoparticles are studied, such as magnetic nanoparticles, ferrofluids and polymers. Finally, several machine learning techniques are implemented to predict nanoparticle transport in porous media. This book provides a complete full reference in mathematical modeling and numerical aspects of nanoparticle transport in porous media. It is an important reference source for engineers, mathematicians, and materials scientists who are looking to increase their understanding of modeling, simulation, and analysis at the nanoscale. Explains the major simulation models and numerical techniques used for predicting nanoscale transport phenomena Provides MATLAB codes for most of the numerical simulation and Python codes for machine learning calculations Uses examples and results to illustrate each model type to the reader Assesses major application areas for each model type
