The Last Lecture Randy Pausch,2008-04-08 After being diagnosed with terminal cancer, a professor shares the lessons he's learned—about living in the present, building a legacy, and taking full advantage of the time you have—in this life-changing classic. We cannot change the cards we are dealt, just how we play the hand. —Randy Pausch A lot of professors give talks titled The Last Lecture. Professors are asked to consider their demise and to ruminate on what matters most to them. And while they speak, audiences can't help but mull over the same question: What wisdom would we impart to the world if we knew it was our last chance? If we had to vanish tomorrow, what would we want as our legacy? When Randy Pausch, a computer science professor at Carnegie Mellon, was asked to give such a lecture, he didn't have to imagine it as his last, since he had recently been diagnosed with terminal cancer. But the lecture he gave—Really Achieving Your Childhood Dreams—wasn't about dying. It was about the importance of overcoming obstacles, of enabling the dreams of others, of seizing every moment (because time is all you have . . . and you may find one day that you have less than you think). It was a summation of everything Randy had come to believe. It was about living. In this book, Randy Pausch has combined the humor, inspiration and intelligence that made his lecture such a phenomenon and given it an indelible form. It is a book that will be shared for generations to come.

Black Holes: The Reith Lectures Stephen Hawking,2016-05-05 “It is said that fact is sometimes stranger than fiction, and nowhere is that more true than in the case of black holes. Black holes are stranger than anything dreamed up by science fiction writers.” In 2016 Professor Stephen Hawking delivered the BBC Reith Lectures on a subject that fascinated him for decades – black holes. In these flagship lectures the legendary physicist argued that if we could only understand black holes and how they challenge the very nature of space and time, we could unlock the secrets of the universe.

More Lost Massey Lectures George Grant,Frank H. Underhill,2008 A broadcasting fixture for more than 45 years and Canada’s preeminent public lecture series, the CBC's Massey Lectures feature provocative talks on pressing topics by major contemporary thinkers. Some of the series’ finest lectures have been lost for many years, unavailable to the public in any form – until now. More Lost Massey Lectures presents recently rediscovered talks: Nobel Prize-winner Willy Brandt discusses the dangerous inequities between developing and industrialized nations while Barbara Ward explains the origin and predicament of underdeveloped countries and Frank Underhill speaks on the deficiencies of the Canadian constitution. George Grant's talk on the worsening predicament of the West through an examination of Friedrich Nietzsche is joined by Claude Levi-Strauss on the nature of myth and its role in human history. Not only of considerable historical significance, these lectures remain hugely relevant in the 21st century. Also included is an introduction by veteran CBC producer Bernie Lucht.

Nobel Lectures ,2008-09-30 This is a collection in which meditations on imagination and the process of writing mingle with keen discussions of global affairs, geography and colonialism, cultural change, and the deeply lasting influences of the past.

Bremen and Freiburg Lectures Martin Heidegger,2012-07-02 This volume presents two important lecture cycles delivered after WWII, exploring the poetry of Hölderlin and the nature of thought itself. Heidegger delivered his lecture series, Insight into That Which Is, at Bremen in 1949. It was his first speaking engagement after World War II, when he was officially banned from teaching. Here, Heidegger openly resumes thinking that deeply engaged him with Hölderlin's poetry and themes developed in his earlier works. In the Freiburg lectures, delivered in 1957, Heidegger ponders thought itself and freely engages with the German idealists and Greek thinkers who had provoked him in the past. Andrew J. Mitchell's translation allows English-speaking readers to explore important connections with Heidegger's earlier works on language, logic, and reality.

Lectures on Architecture Eugène-Emmanuel Viollet-le-Duc,1881

The Lost Lectures of C. Vann Woodward C. Vann Woodward,2020-09-17 C. Vann Woodward is one of the most significant historians of the post-Reconstruction South. Over his career of nearly seven decades, he wrote nine books; won the Bancroft and Pulitzer Prizes; penned hundreds of book reviews, opinion pieces, and scholarly essays; and gained national and international recognition as a public intellectual. Even today historians must contend with Woodward's sweeping interpretations about southern history. What is less known about Woodward is his scholarly interest in the history of white antebellum southern dissenters, the immediate consequences of emancipation, and the history of Reconstruction in the years prior to the Compromise of 1877. Woodward addressed these topics in three mid-century lecture series that have never before been published. The Lost Lectures of C. Vann Woodward presents for the first time lectures that showcase his life-long interest in exploring the contours and limits of nineteenth-century liberalism during key moments of social upheaval in the South. Historians Natalie J. Ring and Sarah E. Gardner analyze these works, drawing on correspondence, published and unpublished material, and Woodward's personal notes. They also chronicle his failed attempts to finish a much-awaited comprehensive history of Reconstruction and reflect on the challenges of writing about the failures of post-Civil War American society during the civil rights era, dubbed the Second Reconstruction. With an insightful foreword by eminent Southern historian Edward L. Ayers, The Lost Lectures of C. Vann Woodward offers new perspectives on this towering authority on nineteenth- and twentieth-century southern history and his attempts to make sense of the past amidst the tumultuous times in which he lived.

Lectures in Geometric Combinatorics Rekha R. Thomas,2006 This book presents a course in the geometry of convex polytopes in arbitrary dimension, suitable for an advanced undergraduate or beginning graduate student. The book starts with the basics of polytope theory. Schlegel and Gale diagrams are introduced as geometric tools to visualize polytopes in high dimension and to unearth bizarre phenomena in polytopes. The heart of the book is a treatment of the secondary polytope of a point configuration and its connections to the statepolytope of the toric ideal defined by the configuration. These polytopes are relatively recent constructs with numerous connections to discrete geometry, classical algebraic geometry, symplectic geometry, and combinatorics. The connections rely on Grobner bases of toric ideals and other methods from commutative algebra. The book is self-contained and does not require any background beyond basic linear algebra. With numerous figures and exercises, it can be used as a textbook for courses on geometric, combinatorial, and computational aspects of the theory of polytopes.

Do Improvise Robert Poynton,2022-10-06 Every day we deal with the unplanned and the unexpected, from a broken toaster to losing (or gaining) a major client. Our natural ability to adapt and improvise gets us through. But we feel as if we're winging it, rather than acting with courage and conviction. Robert Poynton teaches his acclaimed method to some of the world's biggest brands and companies. Now, he shows us how these improvisational skills can be applied to the everyday business of work and life. Newly updated, Do Improvise will help you to navigate the obstacles life throws at you, and recognise that uncertainty can be enjoyed, rather than endured. You will: -Become more productive without trying harder -Overcome creative blocks and generate new ideas -Respond fluidly to events beyond your control -Realise that you don't have to know everything Not sure what to do next? Improvise.

Twenty-One Lectures on Complex Analysis Alexander Isaev,2017-11-29 At its core, this concise textbook presents standard material for a first course in complex analysis at the advanced undergraduate level. This distinctive text will prove most rewarding for students who have a genuine passion for mathematics as well as certain mathematical maturity. Primarily aimed at undergraduates with working knowledge of real analysis and metric spaces, this book can also be used to instruct a graduate course. The text uses a conversational style with topics purposefully apportioned into 21 lectures, providing a suitable format for either independent study or lecture-based teaching. Instructors are invited to rearrange the order of topics according to their own vision. A clear and rigorous exposition is supported by engaging examples and exercises unique to each lecture; a large number of exercises contain useful calculation problems. Hints are given for a selection of the more difficult exercises. This text furnishes the reader with a means of learning complex analysis as well as a subtle introduction to careful mathematical reasoning. To guarantee a student’s progression, more advanced topics are spread out over several lectures. This text is based on a one-semester (12 week) undergraduate course in complex analysis that the author has taught at the Australian National University for over twenty years. Most of the principal facts are deduced from Cauchy’s Independence of Homotopy Theorem allowing us to obtain a clean derivation of Cauchy’s Integral Theorem and Cauchy’s Integral Formula. Setting the tone for the entire book, the material begins with a proof of the Fundamental Theorem of Algebra to demonstrate the power of complex numbers and concludes with a proof of another major milestone, the Riemann Mapping Theorem, which is rarely part of a one-semester undergraduate course.
