Low Book One: Deluxe Edition Rick Remender,2017-10-18 Millennia ago, mankind fled the Earth's surface into the bottomless depths of the darkest oceans. Shielded from a merciless sun's scorching radiation, the human race tried to stave off certain extinction by sending robotic probes far into the galaxy to search for a new home among the stars. Generations later, one family is about to be torn apart in a conflict that will usher in the final race to save humanity from a world beyond hope. Dive into an aquatic fantasy like none you've ever seen before in this oversized hardcover, packed to the gills with concept art, design sketches, original script, and more hidden treasures, as writer RICK REMENDER (DEADLY CLASS, SEVEN TO ETERNITY) and artist GREG TOCCHINI (LAST DAYS OF AMERICAN CRIME) bring you a tale of mankind's final hour in the cold, deathly dark of the sea. David Bowie's Low Hugo Wilcken,2005-08-19 One day I blew my nose and half my brains came out. Los Angeles, 1976. David Bowie is holed up in his Bel-Air mansion, drifting into drug-induced paranoia and confusion. Obsessed with black magic and the Holy Grail, he's built an altar in the living room and keeps his fingernail clippings in the fridge. There are occasional trips out to visit his friend Iggy Pop in a mental institution. His latest album is the cocaine-fuelled Station To Station (Bowie: I know it was recorded in LA because I read it was), which welds R&B rhythms to lyrics that mix the occult with a yearning for Europe, after three mad years in the New World. Bowie has long been haunted by the angst-ridden, emotional work of the Die Brücke movement and the Expressionists. Berlin is their spiritual home, and after a chaotic world tour, Bowie adopts this city as his new sanctuary. Immediately he sets to work on Low, his own expressionist mood-piece.

Physiological Processes in Plants Under Low Temperature Stress A. Bhattacharya,2022-02-25 This book is a collection of comprehensive reviewed chapters covering major physiological aspects, both production as well as biochemical aspects, of a plant under low temperature stress. Low temperature stress has been dealt in two parts, first between 10 to 00 C and secondly between 0 to -400 C. This book highlights the physiological aspects of plants under low temperature stress and explains the various adaptive measures plants undergo to tolerate low temperature stress. Essential information is provided on germination, growth and development, dry matter accumulation, partitioning and final yield of a crop plant. As physiology deals with morphological and biochemical aspect of all the basic processes, therefore an in depth understanding the major physiological issues in plants under high temperature will help plant breeders to tailor different crop plants with desirable physiological traits to do better under higher temperature. The present book is intended to cover the effects of low temperature stress on the various physiological aspects in plants. Not only in production physiology, this book also deals with major biochemical processes, like photosynthesis, nitrogen and lipid metabolism, mineral nutrition and plant

growth hormones. Efforts have been made deal with different measures to mitigate the effects of low temperature stress on plants. This book will be an asset for post graduate students, faculty members, researchers engaged in not only in physiological studies but also agronomy, plant breeding and like subjects. In depth analysis of the major physiological processes in plants under low temperature stress that are presented in this book will help plant breeders for tailoring crops for desirable physiological traits needed to survive and to give better economic return under the threats of low temperature stress. This book is also helpful for policy planners and industries engaged in agribusiness in short term as well as long term gain.

The Low Glycal Diet Jeffrey Dunham,Martha W. Murphy,2015-12-29 Lose up to 10 pounds in the first 2 weeks of Dr. Jeffrey Dunham's proven program. This innovative approach combines low glycemic food-much like those emphasized on the Paleo Diet-with popular high-carb foods. The trick is knowing what to eat, when and how many calories to consume. Dr. Dunham's easy-to-follow coding system tells readers exactly how to do this. The program is rooted in the science of calorie spikes. When calorie spikes are kept low and spread out properly, patients burn more fat. Dr. Dunham capitalizes on this science by using a combination of low glycemic foods and calorie counting to keep calorie spikes low. His proven method has become the key to lasting weight loss for more than 10,000 people. While popular diets have typically focused on counting calories or glycemic load, The Low Glycal Diet is the first diet to take into account how they interact. The Low Glycal Diet walks readers through Dr. Dunham's diet and offers 75 exclusive recipes that are effective low glycemic/high carbohydrate combinations. The companion app, which people use to check if their meals have the right combination of calories and glycemic scale rating, has been downloaded more than 80,000 times.

Corrosion Induced by Low-Energy Radionuclides Gilbert Bellanger,2004-12-18 Nuclear power plants emit radiation and particles across a range of energies. This radiation can cause corrosion to occur in critically important parts of the plant, which can lead to efficiency and safety problems. Gamma rays and neutrons have the highest energies and can break the metal bonds in interior metallic structures causing damage quickly and in easily monitored ways. Consequently these types of radiation and the best alloys to use to mitigate their effects have been extensively researched and their findings applied. However, the same is not true of low energy radiation which effects metal structures in a different way but can still cause appreciable and expensive corrosion. Low

energy radiation degrades the passive oxide layers that protect metals. Without this protective layer the metals are easily corroded. This book uses tritium and tritiated water as models to describe the effects of low energy radiation on the corrosion of metals in these environments. Comprehensive coverage of the fields of liquid and gas flow, heat exchange, gas diffusion in materials, and of materials resistance to corrosion ensures the reader has a full understanding of how these processes effect corrosion in nuclear installations. Such an understanding is essential for the efficient and safe running of all modern plant that uses radioactive material and this book is a critical reference tool for anyone involved in the nuclear power industry or metals research. * Unique coverage of low energy radiation and its corrosive effects in nuclear installations * Provides coverage of basic scientific principles contributing to corrosion * An essential reference for the safe and efficient construction and operation of nuclear installations * Applications in power generation, fuel reprocessing, military and civilian applications. * The first book to present detailed analysis of nuclear corrosion by low energy nuclides * The most complete book available for those serious about understanding corrosion in all its aspects * Keeping you at pace with the new methods that are changing the concept of corrosion in the nuclear industry

Low Temperatures and Cold Molecules Ian W. M. Smith, 2008 This book brings together, for the first time, the results of recent research in areas ranging from the chemistry of cold interstellar clouds (10-20 K), through laboratory studies of the spectroscopy and kinetics of ions, radicals and molecules, to studies of molecules in liquid helium droplets, to attempts to create molecular (as distinct from atomic) Bose-Einstein condensates.

Application of Systematic Review Methods in an Overall Strategy for Evaluating Low-Dose Toxicity from Endocrine Active Chemicals National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Committee on Endocrine-Related Low-Dose Toxicity, 2017-07-14 To safeguard public health, the US Environmental Protection Agency (EPA) must keep abreast of new scientific information and emerging technologies so that it can apply them to regulatory decision-making. For decades the agency has dealt with questions about what animal-testing data to use to make predictions about human health hazards, how to perform dose-response extrapolations, how to identify and protect susceptible subpopulations, and how to address uncertainties. As alternatives to traditional toxicity testing have emerged, the agency has been faced with additional questions about how to incorporate data from such tests into its chemical assessments and whether such tests can replace some traditional testing methods. Endocrine active chemicals (EACs) have raised concerns that traditional toxicity-testing protocols might be inadequate to identify all potential hazards to human health because they have the ability to modulate normal hormone function, and small alterations in hormone concentrations, particularly during sensitive life stages, can have lasting and significant effects. To address concerns about potential human health effects from EACs at low doses, this report develops a strategy to evaluate the evidence for such low-dose effects.

Design Criteria for Low Distortion in Feedback Opamp Circuits Bjørnar Hernes, Trond Sæther, 2006-04-18 Broadband opamps for multi-channel communication systems make strong demands on linearity performance. This book, written

Architectures and Synthesizers for Ultra-low Power Fast Frequency-Hopping WSN Radios Emanuele Lopelli,Johan van der Tang,Arthur H.M. van Roermund,2010-11-19 Wireless sensor networks have the potential to become the third wireless revolution after wireless voice networks in the 80s and wireless data networks in the late 90s. Unfortunately, radio power consumption is still a major bottleneck to the wide adoption of this technology. Different directions have been explored to minimize the radio consumption, but the major drawback of the proposed solutions is a reduced wireless link robustness. The primary goal of Architectures and Synthesizers for Ultra-low Power Fast Frequency-Hopping WSN Radios is to discuss, in detail, existing and new architectural and circuit level solutions for ultra-low power, robust, uni-directional and bi-directional radio links. Architectures and Synthesizers for Ultra-low Power Fast Frequency-Hopping WSN Radios guides the reader through the many system, circuit and technology trade-offs he will be facing in the design of communication systems for wireless sensor networks. Finally, this book, through different examples realized in both advanced CMOS and bipolar technologies opens a new path in the radio design, showing how radio link robustness can be guaranteed by techniques that were previously exclusively used in radio systems for middle or high end applications like Bluetooth and military

communications while still minimizing the overall system power consumption.
