Risk Assessment Methods for Biological and Chemical Hazards in Food Fernando Pérez-Rodríguez, 2020-10-28 Risk assessment has been extensively developed in several scientific fields, such as environmental science, economics, and civil engineering, among others. In the aftermath of the SPS and GATT agreements on the use of risk analysis framework in food trade, signed in the 1990s, international organisations and governments adopted risk assessment as a science-based process to ensure food safety along the food chain. The food industry can also benefit from the use of this approach for food process optimisation and quality assurance. Risk Assessment Methods for Biological and Chemical Hazards in Food introduces the reader to quantitative risk assessment methods encompassing general concepts to specific applications to biological and chemical hazards in foods. In the first section, the book presents food risk assessment as methodology and addresses, more specifically, new trends and approaches such as the development of risk rating methods, risk metrics, risk-benefit assessment studies and quality assessment methods. Section II is dedicated to biological hazards. This section identifies the most relevant biological hazards along the food chain and provides an overview on the types of predictive microbiology models used to describe the microbial response along the food chain. Chapter 12 specifically deals with cross contamination and the quantitative methods that can be applied to describe this relevant microbial process. The development and application of dose-response models (i.e. mathematical function describing the relationship between pathogen dose and health response) are also covered in this section. In Section III, the book translates risk assessment concepts into the area of chemical hazards, defining the process steps to determine chemical risk and describing the uncertainty and variability sources associated with chemicals. Key Features: Presents new trends and approaches in the field of risk assessment in foods Risk assessment concepts are illustrated by practical examples in the food sector Discusses how quantitative information and models are integrated in a quantitative risk assessment framework Provides examples of applications of quantitative chemical risk assessment in risk management The book, written by renowned experts in their field, is a comprehensive collection of quantitative methods and approaches applied to risk assessment in foods. It can be used as an extensive guide for food safety practitioners and researchers to perform quantitative risk assessment in foods

People's Republic of China International Monetary Fund, 2012-04-05 The assessment report on the observance of China's compliance with the Committee for Payment and Settlement System's core principles for systemically important payment systems is examined. Domestic foreign exchange transactions are mostly executed at the China Foreign Exchange Trade Center. Domestic payments are handled through a diverse variety of payment systems, mainly operated by the People's Bank of China, except for cards and some local clearinghouses. Real-time remittances, bills, and cheque-clearing services are widely available to the financial institutions serving the rural areas.

GSM Networks Gunnar Heine, 1999 This practical book provides an extremely comprehensive, up-to-date, and easy-to-understand treatment of the entire GSM network and the signaling methods of its terrestrial interfaces. You learn how to analyze network problems, what measurements you have to take to solve them, and where in a scenario you will find the desired information or parameter. The book introduces you to all the interfaces between the GSM subsystems, starting with the Abis- and Air- Interface and continuing on to VLR's, HLR's and MSC's within the Network Switching Subsystem (NSS). You learn about the various signaling standards or methods used in GSM, including TCAP and MAP and how to apply this knowledge when working with GSM networks.

Modelando el crecimiento de ciudades medias Cristián Henríquez, 2014 Este libro presenta un modelo que estudia el crecimiento urbano de dos ciudades medias chilenas, Chillán y Los Ángeles, mediante un modelo prospectivo del cambio uso de suelo que integra sistemas de información geográfica (SIG), percepción remota y técnicas de simulación espacial. Con los resultados del modelo se realiza una evaluación ambiental retrospectiva y prospectiva de los impactos en la intensidad de la isla de calor urbana, cambios en el coeficiente de escorrentía superficial y la estimación de pérdida de suelo agrícola. Este enfoque propuesto, con un fuerte énfasis metodológico y aplicado, permite plantear desafíos a un público interesado en el desarrollo de la disciplina geográfica, el urbanismo y las ciencias ambientales, así como igualmente dar orientaciones a la política pública de modo de lograr ciudades más sustentables.

Aircraft Propulsion and Gas Turbine Engines Ahmed F. El-Sayed, 2008-02-27 The escalating use of aircraft in the 21st century demands a thorough understanding of engine propulsion concepts, including the performance of aero engines. Among other critical activities, gas turbines play an extensive role in electric power generation, and marine propulsion for naval vessels and cargo ships. In the most exhaustive volume to date, this text examines the foundation of aircraft propulsion: aerodynamics interwoven with thermodynamics, heat transfer, and mechanical design. With a finely focused approach, the author devotes each chapter to a particular engine type, such as ramjet and pulsejet, turbojet, and turbofan. Supported by actual case studies, he illustrates engine performance under various operating conditions. Part I discusses the history, classifications, and performance of air breathing engines. Beginning with Leonardo and continuing on to the emergence of the jet age and beyond, this section chronicles inventions up through the 20th century. It then moves into a detailed discussion of different engine types, including pulsejet, ramjet, single- and multi-spool turbojet, and turbofan in both subsonic and supersonic applications. The author discusses Vertical Take Off and Landing aircraft, and provides a comprehensive examination of hypersonic scramjet and turbo ramjet engines. He also analyzes the different types of industrial gas turbines having single- and multi-spool with intercoolers, regenerators, and reheaters. Part II investigates the design of rotating compressors and turbines, and non-rotating components, intakes, combustion chambers, and nozzles for all modern jet propulsion and gas turbine engine systems, along with their performance. Every chapter concludes with illustrative examples followed by a problems section; for greater clarity, some provide a listing of important mathematical relations.

Un Convention Against Torture Great Britain. Parliament. Joint Committee on Human Rights, 2008 This report, from the joint House of Lords and House of Commons Committee (Joint Committee on Human Rights, HLP 156/HCP 527, session 2007-08, ISBN 9780104013410), is a follow-up to an earlier report, (HLP 185-I/HCP 701-I, session 2005-06, ISBN 9780104008638). This report focused on the UN Convention Against Torture and its applicability to the UK armed forces. This new report considers discrepancies in the evidence provided to the Committee about the use of prohibited interrogation techniques in Iraq. The Committee's conclusions, were as follows: that conditioning techniques such as hooding and the use of stress positioning were used by some British troops in Iraq, despite such techniques been prohibited in 1972; that the hooding and stress positioning by the First Queen's Lancashire Regiment in 2003,

was based on legal advice from Brigade headquarters; that the interpretation of using such techniques may have been too narrow and interpreted as only applying to interrogation in Northern Ireland; that the prohibition of such techniques was not clearly articulated to the troops in Iraq; up until 2005, interrogation personnel were trained in proscribed techniques, demonstrating what they might be subjected to if captured. The Committee is yet to receive an explanation from the Ministry of Defence for the the discrepancies between the evidence given to the Joint Committee in 2004 and 2006 on the use of prohibited conditioning techniques and recommends that the Secretary of State for Defence should confirm a detailed response will be received about the discrepancies, following the public inquiry into the death of Baha Mousa.

Formal Approaches to Software Testing Jens Grabowski,Brian Nielsen,2005-03-07 Testing often accounts for more than 50% of the required e?ort during system development.Thechallengeforresearchistoreducethesecostsbyprovidingnew methods for the speci?cation and generation of high-quality tests. Experience has shown that the use of formal methods in testing represents a very important means for improving the testing process. Formal methods allow for the analysis andinterpretationofmodelsinarigorousandprecisemathematicalmanner.The use of formal methods is not restricted to system models only. Test models may also beexamined.Analyzingsystemmodelsprovidesthepossibilityofgenerating complete test suites in a systematic and possibly automated manner whereas examining test models allows for the detection of design errors in test suites and their optimization with respect to readability or compilation and execution time. Due to the numerous possibilities for their application, formal methods have become more and more popular in recent years. The Formal Approaches in Software Testing (FATES) workshop series also bene?ts from the growing popularity of formal methods. After the workshops in Aalborg (Denmark, 2001), Brno (Czech Republic, 2002) and Montr´ eal (Canada, 2003), FATES 2004 in Linz (Austria) was the fourth workshop of this series. Similar to the workshop in 2003, FATES 2004 was organized in a?liation with the IEEE/ACM Conference on Automated Software Engineering (ASE 2004). FATES 2004 received 41 submissions. Each submission was reviewed by at least three independent reviewers from the Program Committee with the help of some additional reviewers. Based on their evaluations, 14 full papers and one wo- in-progress paper from 11 di?erent countries were selected for presentation.

Electronic Warfare Target Location Methods, Second Edition Richard Poisel,2012 Worldwide growth of space communications has caused a rapid increase in the number of satellites operating in geostationary orbits, causing overcrowded orbits. This practical resource is designed to help professionals overcome this problem. This timely book provides a solid understanding of the use of radio interferometers for tracking and monitoring satellites in overcrowded environments. Practitioners learn the fundamentals of radio interferometer hardware, including antennas, receiving equipment, signal processing and phase detection, and measurement accuracies. This in-depth volume describes the nature of the targets to be tracked by the interferometer, helping to clarify the movement of target satellites and what specific information has to be caught by the interferometer. Additionally, engineers find details on applications to practical cases of satellite tracking, covering different types of interferometers, recent technical developments, orbital monitoring and safety control.
