These are more commonly referred to as MT4 or MT5, and there are many reputable brokers who offer these platforms. As mentioned above, the method is now also available to be traded on the very popular web-based TradingView platform. Although Jim concentrates solely on Forex trading, there is no reason why you could not trade this method on other financial instruments offered by many brokers. These may include: · Oil · Precious metals · Commodities · Stock indices · Individual stocks · Cryptocurrencies You may not wish to conduct your

actual trading off the Metatrader or TradingView platforms, however, as this method relies on the use of Jim's custom indicators which he had specifically built for Metatrader and TradingView, you will need to at least download a free MT4/MT5 or TV demonstration platform to enable you to conduct your trade analysis, and then place your actual trades on your preferred Broker's platform. **Nucleosides and Nucleotides as Antitumor and Antiviral Agents** D.C. Baker, C.K. Chu, 2013-11-11 Due to the worldwide epidemic of acquired immunodeficiency syndrome (AIDS), the past ten years have witnessed a flurry of activity in the chemotherapy of viral diseases. Unprecedented scientific efforts have been made by scientists and clinicians to combat infections of human immunodeficiency virus (HIV), the causative agent. Looking back over the past ten years, we have made remarkable progress toward the treatment of the viral disease: isolation of HIV only two years after the identification of the disease, plus major strides in the areas of the molecular biology and virology of the retrovirus, etc. More remarkably, the discovery of the chemotherapeutic agent AZT (Retrovir) was made within two years after the isolation and identification of the virus, followed by unprecedented drug development efforts to culminate in the FDA approval of AZT in twenty-three months, which was a record-breaking time for approval of any drug for a major disease. The last six to seven years have particularly been an exciting and productive period for nucleoside chemists. Since the activity of AZT was established in 1985, nucleoside chemists have had golden opportunities to discover additional anti-HIV nucleosides, which are hoped to be less toxic and more effective than AZT, and the opportunity continues. As we all are aware, AZT possesses extremely potent anti-HIV activity, and no other nucleoside or non nucleoside has surpassed the potency of AZT in vitro.

**Matrix Proteases in Health and Disease** Niels Behrendt, 2012-07-10 Presenting a comprehensive overview of the multifaceted field of proteases in the extracellular matrix environment, this reference focuses on the recently elucidated functions of complex proteolytic systems in physiological and pathological tissue remodeling. The proteases treated include both

serine proteases such as plasminogen activators and TTSPs, metalloproteases such as MMPs and ADAMS and cysteine protease cathepsins. The text specifically addresses the role of extracellular proteases in cancer cell invasion, stroke and infectious diseases, describing the basic biochemistry behind these disease states, as well as therapeutic strategies based on protease inhibition. With its trans-disciplinary scope, this reference bridges the gap between fundamental research and biomedical and pharmaceutical application, making this required reading for basic and applied scientists in the molecular life sciences.
