Mega-Projects Alan A. Altshuler, David E. Luberoff, 2004-05-13 Since the demise of urban renewal in the early 1970s, the politics of large-scale public investment in and around major American cities has received little scholarly attention. In *MEGA-PROJECTS*, Alan Altshuler and David Luberoff analyze the unprecedented wave of large-scale (mega-) public investments that occurred in American cities during the 1950s and 1960s; the social upheavals they triggered, which derailed large numbers of projects during the late 1960s and early 1970s; and the political impulses that have shaped a new generation of urban mega-projects in the decades since. They also appraise the most important consequences of policy shifts over this half-century and draw out common themes from the rich variety of programmatic and project developments that they chronicle. The authors integrate narratives of national as well as state and local policymaking, and of mobilization by (mainly local) project advocates, with a profound examination of how well leading theories of urban politics explain the observed realities. The specific cases they analyze include a wide mix of transportation and downtown revitalization projects, drawn from numerous regions—most notably Boston,

Denver, Los Angeles, New York City, Chicago, Atlanta, Dallas, Portland, and Seattle. While their original research focuses on highway, airport, and rail transit programs and projects, they draw as well on the work of others to analyze the politics of public investment in urban renewal, downtown retailing, convention centers, and professional sports facilities. In comparing their findings with leading theories of urban and American politics, Altshuler and Luberoff arrive at some surprising findings about which perform best and also reveal some important gaps in the literature as a whole. In a concluding chapter, they examine the potential effects of new fiscal pressures, business mobilization to relax environmental constraints, and security concerns in the wake of September 11. And they make clear their own views about how best to achieve a balance between developmental, environmental, and democratic values in public investment decisionmaking. Integrating fifty years of urban development history with leading theories of urban and American politics, MEGA-PROJECTS provides significant new insights into urban and intergovernmental politics.

Managing Sport Mega-Events Stephen Frawley, 2016-06-17 Managing Sport Mega-Events explores global developments in the management of sport mega-events. Sport mega-events such as the Olympic Games and the Football World Cup have been examined from a number of academic perspectives including history, sociology, politics, urban planning and economics. What is lacking, however, is a book which identifies and evaluates the current issues and complexities faced by those charged with the responsibility of managing these sport mega-events. This book fills the gap. The book addresses three broad but interconnected themes. First, strategic matters are explored focusing on the rise of sport mega-events, the management of stakeholders and governance issues. Second, how organisers can best ensure the sustainable management of sport mega-events is considered. Third, operational matters and related issues are examined including media management, broadcast management, venue management, risk management, marketing and sponsorship management. The book

draws on leading international sport management scholars, each of whom has expertise in the organisation of sport mega-events. It makes a valuable contribution to the existing literature.

Fundamental Theories of Mega Infrastructure Construction Management Zhaohan Sheng, 2017-10-20 Fundamental Theories of Mega Infrastructure Construction Management: Theoretical Considerations from Chinese Practices is a collection of decades of research and applications of managing megaprojects using theories of complex systems and management sciences. It presents basic (classical) theory of megaproject management and is a showcase of more than 30 years of research of complex system and management sciences on the theory of megaproject management resulting from the integrating of theory and practice of megaprojects. The theory and models have undergone rigorous

systematic testing during the management and implementation of megaprojects in China. Megaprojects are huge undertakings, often in infrastructure (bridges, tunnels, airports, etc.) that involve huge levels of investment, often take years to complete, and typically run into delays, cost overruns, and any number of unforeseen problems. Over the last few decades, no one country has undertaken more of these projects than China, and this book presents the fundamental theories underlying the practice of Mega Infrastructure Construction Management as practiced in China. Individual chapters provide a basic definition of Mega Infrastructure Construction and its management; an overview of the theories behind it; the Formation Path; basic concepts; fundamental principles; scientific problems; the Method System of Meta-synthesis; specialized methods in research; and intelligent management of Mega Infrastructure Construction. Although the theoretical construction management problems in this book are derived from construction practices in China, they can be applied universally and extended for great fundamental significance.

Policing Sport Mega-Events Dennis Pauschinger, 2024-01-16 Security has become one of the most important aspects of sport mega-event organisation. This book explores how Rio de Janeiro was imagined and transformed into a security fortress when the 2014 Men's World Cup and the 2016 Olympics came to the city and how the fortress was nonetheless permeable and porous. Dennis Pauschinger experienced exceptional backstage access at high level in the

Brazilian mega-event security architecture as well as at street level with the local public security sphere. His ethnographic account takes us from the hidden world of surveillance and control centres, to the security perimeters around stadiums, and to the mundane routine of police officers during day and night shifts at local police stations or at the Special Forces' headquarters. This book shows how police officers' emotions and Special Forces' war narratives impact the static and technology-based security models at mega-events and how traditional patterns of police work, along lines of class and racial inequalities, still prevail and shape the city's public security. The book argues against the common narrative of the positive impacts of mega-event security legacies upon host cities by advancing towards a general understanding of how security governance is carried out in places where the use of digital security technologies co-exists with overly lethal and repressive forms of policing.
