**The Mobile Revolution** Dan Steinbock, 2005 As more and more people use mobile handsets, a revolution is taking place in computing and telecommunications. Two extraordinary industries - the Internet and mobile communications - are converging. But this is just the beginning. As the third industry - consumer electronics - and the fourth - media and entertainment - join in, changes in consumer markets are inevitable, as evidenced by the explosive growth of mobile media, games and entertainment. In *The Mobile Revolution* the senior executives of the world's leading mobile vendors, operators, service providers, software giants, chip kings, media and entertainment conglomerates, publishers, music moguls and brand marketers reveal their secrets and strategies. Nokia, Motorola, Ericsson, Qualcomm, Vodafone, NTT DoCoMo, SK Telecom, Verizon Wireless, Microsoft, Intel, IBM, RealNetworks, Yahoo, New York Times, Wall Street Journal, EMI, BMI, BMG, IFPI, CNN, ABC, Disney, Fox, Sony, Warner Music and Universal are just a few of the names that feature. As a result, the book abounds with inside stories of great industry successes (and equally great flops!) as the narrative shifts constantly between the major cities of several continents - from Helsinki and Stockholm, London and Frankfurt, Tokyo and Seoul, Beijing and Singapore, New York City and Los Angeles, to Bangalore and Moscow. *The Mobile Revolution* is about the making of mobile markets and services worldwide, with a firm emphasis on innovation. It is not just another account of technology innovation; rather it examines the rise of mobile services in the context of maturing and emerging mobile markets.

**The Mobile Wave** Michael J. Saylor, 2013-05-28 In the tradition of international bestsellers, *Future Shock* and *Megatrends*, Michael J. Saylor, CEO of MicroStrategy, brings *The Mobile Wave*, a ground-breaking analysis of the impact of mobile intelligence -- the fifth wave of computer technology. *The Mobile Wave* argues that the changes brought by mobile computing are so big and widespread that it's impossible for us to see it all, even though we are all immersed in it. Saylor explains that the current generation of mobile smart phones and tablet computers has set the stage to become the universal computing platform for the world. In the hands of billions of people and accessible anywhere and anytime, mobile computers are poised to become an appendage of the human being and an essential tool for modern life. With the perspective of a historian, the precision of a technologist, and the pragmatism of a CEO, Saylor provides a panoramic view of the future mobile world. He describes how: A Harvard education will be available to anyone with the touch of a screen. Cash will become virtual software and crime proof. Cars, homes, fruit, animals, and more will be tagged so they can tell you about themselves. Buying an item will be as easy as pointing our mobile device to scan and pay. Land and capital will become more of a liability than an asset. Social mobile media will push all businesses to think and act like software companies. Employment will shift as more service-oriented jobs are automated by mobile software. Products, businesses, industries, economies, and even society will be altered forever as the Mobile wave washes over us and changes the landscape. With so much change, *The Mobile Wave* is a guidebook for individuals, business leaders, and public figures who must navigate the new terrain as mobile intelligence changes everything.

**Privacy Concerns Surrounding Personal Information Sharing on Health and Fitness Mobile Apps** Sen, Devjani, Ahmed, Rukhsana, 2020-08-07 Health and fitness apps collect various personal information including name, email address, age, height, weight, and in some cases, detailed health information. When using these apps, many users trustfully log everything from diet to sleep patterns. However, by sharing such personal information, end-users may make themselves targets to misuse of this information by unknown third parties, such as insurance companies. **Mobile Learning** Danielle Herro,Sousan Arafeh,Richard Ling,Chris Holden,2018-02-01 There can be no doubt that mobile technologies are here to stay. Global mobile traffic grew 74 percent in 2015 alone, with 563 million devices and connections added -- most of them tablets and Smartphones. This growth has been 4000-fold in the past 10 years and 400 million-fold in the past 15 years (Cisco, 2016). Mobile technologies permeate the lives of 21st century citizens as mainstays of organizational and institutional day-to-day operations, commerce, and communication and as tools used to support individuals' personal, social, and career responsibilities. In both the corporate and educational worlds, e- and m-learning and marketing with mobile technologies are moving forward at breakneck speed with, in many cases, a blurring of traditional sector boundaries. As neither the technology nor the uses are static, exploring practices and policies that underpin this quickly shifting mobile technology context is crucial for ensuring its intelligent, purposeful, and equitable use. This edited book provides a venue for researchers to share their work on mobile learning with a focus on uses for mobiles in informal settings and PK-20 classrooms, language learning, mobile gaming, leadership and policy issues, and what mobile learning in the future may be. It assists researchers and educators to consider and answer questions such as: What is "mobile learning" today? How can mobiles be used to enable learning? How is mobile learning crossing or connecting economic, social, and/or cultural sectors? How do specific cultural practices with media influence mobile learning (e.g., youth practices, educator practices, parent practices, community practices)? What are policy and leadership implications in supporting mobile learning? What policies, practices, and/or pedagogical approaches are necessary to move forward with mobiles in schools or universities? In what ways is mobile learning impacting education; including how students learn and teachers teach? What will/ should/might mobile learning look like in the future?

Tap Anindya Ghose,2017-04-14 How the smartphone can become a personal concierge (not a stalker) in the mobile marketing revolution of smarter companies, value-seeking consumers, and curated offers. Consumers create a data trail by tapping their phones; businesses can tap into this trail to harness the power of the more than three trillion dollar mobile economy. According to Anindya Ghose, a global authority on the mobile economy, this two-way exchange can benefit both customers and businesses. In Tap, Ghose welcomes us to the mobile economy of smartphones, smarter companies, and value-seeking consumers. Drawing on his extensive research in the United States, Europe, and Asia, and on a variety of real-world examples from companies including Alibaba, China Mobile, Coke, Facebook, SK Telecom, Telefónica, and Travelocity, Ghose describes some intriguingly contradictory consumer behavior: people seek spontaneity, but they are predictable; they find advertising annoying, but they fear missing out; they value their privacy, but they increasingly use personal data as currency. When mobile advertising is done well, Ghose argues, the smartphone plays the role of a personal concierge—a butler, not a stalker. Ghose identifies nine forces that shape consumer behavior, including time, crowdedness, trajectory, and weather, and he examines these how these forces operate, separately and in combination. With Tap, he highlights the true influence mobile wields over shoppers, the behavioral and economic motivations behind that influence, and the lucrative opportunities it represents. In a world of artificial intelligence, augmented and virtual reality, wearable technologies, smart homes, and the Internet of Things, the future of the mobile economy seems limitless.
