Creating Applications with Mozilla David Boswell,2002-09-24 Provides guidelines on creating applications with Mozilla that are based on top of the core Mozilla source code. Focuses on utilizing Mozilla's cross-platform development framework.

Rapid Application Development with Mozilla Nigel McFarlane,2004 Rapid Application Development with Mozilla, part of the Bruce Perens Open Source Series, is a concise guide for any programmer who wants to learn the versatility and compatibility of Mozilla, an open source toolset with over a thousand objects and components. An additional feature of Rapid Application Development with Mozilla is the NoteTaker Web browser add-on-a sample Mozilla application that is developed throughout the book. Written by Web and XML expert Nigel McFarlane, this book is the perfect addition to the library of any user-interface software engineer, cross-platform developer, or any programmer looking to discover the benefits of rapid application development.

Firefox Hacks Nigel McFarlane,2005 A guide to Firefox covers such topics as security, Web surfing enhancements, and integrating Firefox with other tools.

Peer Participation and Software David R. Booth,2010-04-09 An examination of Mozilla's unique approach to software development considers how this model of participation might be applied to political and civic engagement. Firefox, a free Web browser developed by the Mozilla Foundation, is used by an estimated 270 million people worldwide. To maintain and improve the Firefox browser, Mozilla depends not only on its team of professional programmers and managers but also on a network of volunteer technologists and enthusiasts—free/libre and open source software (FLOSS) developers—who contribute their expertise. This kind of peer production is unique, not only for its vast scale but also for its combination of structured, hierarchical management with open, collaborative volunteer participation. In this MacArthur Foundation Report, David Booth examines the Mozilla Foundation's success at organizing large-scale participation in the development of its software and considers whether Mozilla's approach can be transferred to government and civil society. Booth finds parallels between Mozilla's collaboration with Firefox users and the Obama administration's philosophy of participatory governance (which itself amplifies the much older Jeffersonian ideal of democratic participation). Mozilla's success at engendering part-time, volunteer participation that produces real marketplace innovation suggests strategies for organizing civic participation in communities and government. Mozilla's model could not only show us how to encourage the technical community to participate in civic life but also teach us something about how to create successful political democracy.

Learning Firefox OS Application Development Tanay Pant,2015-10-09 Learn to design, build, and deploy your Firefox OS applications, built with web technologies, to the Firefox Marketplace About This Book Create beautiful and interactive Firefox OS applications by applying your knowledge of web development Cater your applications to a huge number of users by porting them to the Firefox OS A step-by-step learning workflow with real-life applications to demonstrate the concepts Who This Book Is For This is a practical guide that uses hands-on examples to teach you how to create applications for Firefox OS and also how to port applications to Firefox Marketplace. This book is intended for developers who want to build applications for Firefox OS. An understanding of HTML5, JavaScript, and CSS is required. What You Will Learn Install, use, and access the Firefox OS simulator with the help of WebIDE Get to know about application manifest files and the essential difference between web applications and Firefox OS applications Create an application that measures the tapping speed of the user Create an application that allows a user to check in at a place with geolocation tagging Access device-specific features with WebAPIs and implement these by building a photo editing and sharing application Submit your own applications to the Firefox Marketplace and share them with others Professionally maintain the code of your application with the help of Github and deploy your hosted applications to OpenShift In Detail With broad compatibility, the latest in web technologies, and powerful development tools, Firefox is a great choice for both web developers and end users. Firefox OS's promotion of HTML5 as a first class citizen opens up the walled gardens of mobile application development for web developers. It is

because of this initiative that no special SDKs are required to develop for Firefox OS. This book will help you excel in the art of developing applications for Firefox OS. It sequentially covers knowledge building, skills acquisition, and practical applications. Starting with an introduction to Firefox OS, usage of WebIDE, and then the application structure, this book introduces applications of increasing complexity with each chapter. An application that measures your tapping speed, a geolocation tagging application, and a photo editing and sharing application are the three applications that will be built from scratch. You will learn about topics such as the difference between various types of Firefox OS applications, application manifest files, offline apps, and designing principles for applications. You will also learn to test and submit the applications to the marketplace and finally maintain the repository of the Firefox OS application. By the end, you will be able to develop beautifully designed, fully-fledged, and rigorously tested Firefox OS applications and also share them at the Firefox OS Marketplace. Style and approach This book is an easy-to-grasp workflow with practical examples of real-world applications such as Clickr, Check In!, and FotoFox. Each chapter explains the concepts, which are then reinforced as they are demonstrated in an application or a flowchart.

Creating Applications with Mozilla David Boswell, Brian King (Computer programmer), Ian Oeschger, 2002 Mozilla is not just a Web browser. Mozilla is also a framework for building cross-platform applications using standards such as CSS (Cascading Style Sheets), XML languages such as XUL (XML-based User-interface Language), XBL (eXtensible Binding Language), and RDF (Resource Description Framework), as well as Gecko, Mozilla's rendering engine, and other technologies. The Mozilla development framework also makes use of programming languages such as JavaScript, C++, C, Python, and IDL (Interface Definition Language), plus framework technologies such as XPConnect and XPCOM, Mozilla's component model. In addition to Netscape's Mozilla-based browsers (Netscape 6.x and 7.x), the Mozilla framework has been used to create other browsers such as Galeon and Chimera, and chat clients such as ChatZilla and JabberZilla. Developers have also used Mozilla to create development tools, browser enhancements, and games, as well as many other types of add-ons and applications. This book explains how applications are created with Mozilla and provides step-by-step information about how you can create your own programs using Mozilla's powerful cross-platform development framework. This book also includes examples of many different types of existing applications to demonstrate some of the possibilities of Mozilla development.

Firefox For Dummies Blake Ross, 2011-05-09 Firefox For Dummies gives you the inside scoop on the exciting new browser from the Web wizard that got it started. The book's author, Blake Ross, began developing Firefox as a teenager. Once available to the world, the simple and powerful tool was an instant hit claiming a sizable share of the Web browser market with over 140 million downloads. In this book Blake not only gives you the lowdown on how to use Firefox for safe Web searching, but he also shares his insight into how the product came to life. It's a combination of practical tech insight and a good story that is rare in computer books. Topics covered include downloading and installing Firefox, creating a home page, searching with Google, creating customized themes and toolbars, using tabbed browsing, downloading and saving files, maintaining security and privacy, eliminating annoying popups, and adding Firefox extensions.

Programming Firefox Kenneth C. Feldt, 2007-04-25 This is your guide to building Internet applications and user interfaces with the Mozilla component framework, which is best known for the Firefox web browser and Thunderbird email client. Programming Firefox demonstrates how to use the XML User Interface Language (XUL) with open source tools in the framework's Cross-Platform Component (XPCOM) library to develop a variety of projects, such as commercial web applications and Firefox extensions. This book serves as both a programmer's reference and an in-depth tutorial, so not only do you get a comprehensive look at XUL's capabilities--from simple interface design to complex, multitier applications with real-time operations--but you also learn how to build a complete working application with XUL. If you're coming from a Java or .NET environment, you'll be amazed at how quickly large-scale applications can be constructed with XPCOM and XUL. Topics in Programming Firefox include: An overview of Firefox technology An introduction to the graphical

elements that compose a XUL application Firefox development tools and the process used to design and build applications Managing an application with multiple content areas Introduction to Resource Description Files, and how the Firefox interface renders RDF Manipulating XHTML with JavaScript Displaying documents using the Scalable Vector Graphics standard and HTML Canvas The XML Binding Language and interface overlays to extend Firefox Implementing the next-generation forms interface through XForms Programming Firefox is ideal for the designer or developer charged with delivering innovative standards-based Internet applications, whether they're web server applications or Internet-enabled desktop applications. It's not just a how-to book, but a what-if exploration that encourages you to push the envelope of the Internet experience.

It's Our Research Tomer Sharon,2012-03-21 It's Our Research: Getting Stakeholder Buy-in for User Experience Research Projects discusses frameworks, strategies, and techniques for working with stakeholders of user experience (UX) research in a way that ensures their buy-in. This book consists of six chapters arranged according to the different stages of research projects. Topics discussed include the different roles of business, engineering, and user-experience stakeholders; identification of research opportunities by developing empathy with stakeholders; and planning UX research with stakeholders. The book also offers ways of teaming up with stakeholders; strategies to improve the communication of research results to stakeholders; and the nine signs that indicate that research is making an impact on stakeholders, teams, and organizations. This book is meant for UX people engaged in usability and UX research. Written from the perspective of an in-house UX researcher, it is also relevant for self-employed practitioners and consultants who work in agencies. It is especially directed at UX teams that face no-time-no-money-for-research situations. Named a 2012 Notable Computer Book for Information Systems by Computing Reviews Features a series of video interviews with UX practitioners and researchers Provides dozens of case studies and visuals

from international research practitioners Provides a toolset that will help you justify your work to stakeholders, deal with office politics, and hone your client skills Presents tried and tested techniques for working to reach positive, useful, and fruitful outcomes

Internet Health Report 2019 Mozilla Foundation,2019-08-31 This annual report is a call to action to recognize the things that are having an impact on the internet today, and to embrace the notion that we as humans can change how we make money, govern societies, and interact with one another online. We invite you to participate in setting an agenda for how we can work together to create an internet that truly puts people first. This book is neither a country-level index nor a doomsday clock. Our intention is to show that while the worldwide consequences of getting things wrong with the internet could be huge - for peace and security, for political and individual freedoms, for human equality - the problems are never so great that nothing can be done. More people than you imagine are working to make the internet healthier by applying their skills, creativity, and personal bravery to business, technology, activism, policy and regulation, education, and community development.

Netscape Mozilla Source Code Guide William R. Stanek,1999-12-23 In this friendly, authoritative guide, bestselling author Stanek guides programmers through the complex maze of Netscape Communicator's code, which contains approximately 30 million lines of code that are extremely difficult to navigate. He introduces Mozilla and the Netscape Open Source program, discusses how to become involved, and shows how to use the library hooks and extensions.

People Operations at Mozilla Corporation Homa Bahrami, 2013 The Mozilla case study describes Debbie Cohens, Vice President and Chief of People, key initiatives in a software entity that was one of the pioneers of the open source movement. The case study showcases Mozilla's unique culture of distributed decision-making and delegated leadership it has a small staff of over 1,100 and millions of volunteers around the world. The case also showcases Cohen's innovative, yet tailored, talent strategy for Mozilla, and implementation of a series of initiatives related to compensation, onboarding, and development. The case study concludes in April 2013, when Cohen is able to reflect on her time working at such a unique and some would say cultish organization.
