Print Punch. Artefacts from the Punch Card Computing Era ,2020 Data used to be physical. In an era when 1s and 0s seem to hover above our heads, 'Print Punch' returns to the heyday of the punch card?to a time when you could touch (and punch) data. The aesthetics of this early move towards automation represent a unique moment in our history, when we designed for machines instead of human beings. Rigorous constraints, inherent in punch card technology, unwittingly birthed a coherent design language: rhythm in grids, punched absences and presences, and the patterns in them dancing to their own machine logic. Now obsolete, punch cards were the primary method of data storage and processing from the 1890s until the late 1970s; spanning almost a century of ubiquitous utility, the artefacts of that era sit between these pages to be examined anew.0Featuring over 200 punch cards, 150 archival images and essays by Steven E Jones, Sandra Rendgen and John L Walters.

Punched-Card Systems and the Early Information Explosion, 1880–1945 Lars Heide,2009-04-27 At a time when Internet use is closely tracked and social networking sites supply data for targeted advertising, Lars Heide presents the first academic study of the

invention that fueled today's information revolution: the punched card. Early punched cards helped to process the United States census in 1890. They soon proved useful in calculating invoices and issuing pay slips. As demand for more sophisticated systems and reading machines increased in both the United States and Europe, punched cards served ever-larger data-processing purposes. Insurance companies, public utilities, businesses, and governments all used them to keep detailed records of their customers, competitors, employees, citizens, and enemies. The United States used punched-card registers in the late 1930s to pay roughly 21 million Americans their Social Security pensions, Vichy France used similar technologies in an attempt to mobilize an army against the occupying German forces, and the Germans in 1941 developed several punched-card registers to make the war effort—and surveillance of minorities—more effective. Heide's analysis of these three major punched-card systems, as well as the impact of the invention on Great Britain, illustrates how different cultures collected personal and financial data and how they adapted to new technologies. This comparative study will interest students and scholars from a wide range of disciplines, including the history of technology, computer science, business history, and management and organizational studies.

Microfilm Aperture Card System Thomas H. Korte,1960 The microfilm aperture card system, which is a new concept in the storage, reproduction, and distribution of engineering drawings, and associated data is discussed. The microfilm aperture card is a common, ordinary tabulating punch card. A rectangular hole or aperture is die-cut into this card. The hole is edged with a narrow, transparent adhesive ledge. To this adhesive ledge is affixed a segment, or frame, of microfilm containing a transparency of an engineering drawing. Factual information to the drawing is punched into the card and automatically printed along the top edge. The new system will operate as follows: instead of furnishing full-size vandykes of drawings by contract, the aircraft and supporting industries of the US will furnish microfilm and punched tabulating cards to the central AF automation control. From these, master microfilm aperture cards will be generated for the AF central drawing repository. The new method combines the advantages of microfilm with the operational precision and speed of automatic tabulating equipment. The system overcomes the problems of excess storage space and shipping-weight as well as the problems of high-cost and low-output-rate formerly associated with comprehensive handling of engineering drawings.

Classification and Coding System for Compilations from the World Literature

on Insects and Other Arthropods that Affect the Health and Comfort of Man
Bernard Valentine Travis,1962 A system of classifying and coding entomological information from the world literature on arthropods which affect the health and comfort of man onto punch cards was developed to provide a method for readily recovering this information for immediate use. More than 700 journals and other scientific publications from which data for coding may be drawn are listed. Titles are arranged alphabetically nd are numbered for entry on punch cards, which also indicate the author and date of publication. A geographic code for the world listing major administrative subdivisions for most countries, indicates the geographical areas for recording entomological data on punch cards. A world map is inclosed to aid in the identification of the major geographic l entries. The classification for subject matter co ins 9 categories of information for which space is assigned on the cards. Included are designations for genus, species, geographical range, seasonal activity, breeding habitat, and disease relationships. (Author).
