MRI of Short and Ultrashort-T₂ Tissues Jiang Du, Graeme M. Bydder, 2023 Zusammenfassung: This book comprehensively covers ultrashort echo time (UTE), zero echo time (ZTE), and other magnetic resonance imaging (MRI) acquisition techniques for imaging of short and ultrashort-T₂ tissues. MRI uses a large magnet and radio waves to generate images of tissues in the body. The MRI signal is characterized by two time constants, spin-lattice relaxation time (T₁) which describes how fast the longitudinal magnetization recovers to its initial value after tipping to the transverse plane, and spin-spin relaxation time (T₂) which describes how fast the transverse magnetization decays. Conventional MRI techniques have been developed to image and quantify tissues with relatively long T₂s. However, the body also contains many tissues and tissue components such as cortical bone, menisci, ligaments, tendons, the osteochondral junction, calcified tissues, lung parenchyma, iron containing tissues, and myelin, which have short or ultrashort-T₂s. These tissues are invisible with conventional MRI, and their MR and tissue properties are not measurable. UTE and ZTE type sequences resolve these challenges and make these tissues visible and quantifiable. This book first introduces the basic physics of conventional MRI as well as UTE and ZTE type MRI, including radiofrequency excitation, data acquisition, and image reconstruction. A series of contrast mechanisms are then introduced and these provide high resolution, high contrast imaging of short and ultrashort-T₂ tissues. A series of quantitative UTE imaging techniques are described

for measurement of MR tissue properties (proton density, T1, T2, T2*, T1ρ, magnetization transfer, susceptibility, perfusion and diffusion). Finally, clinical applications in the musculoskeletal, neurological, pulmonary and cardiovascular systems are described. This is an ideal guide for physicists and radiologists interested in learning more about the use of UTE and ZTE type techniques for MRI of short and ultrashort-T2 tissues

Proceedings of the Future Technologies Conference (FTC) 2020, Volume 2 Kohei Arai, Supriya Kapoor, Rahul Bhatia, 2020-10-31 This book provides the state-of-the-art intelligent methods and techniques for solving real-world problems along with a vision of the future research. The fifth 2020 Future Technologies Conference was organized virtually and received a total of 590 submissions from academic pioneering researchers, scientists, industrial engineers, and students from all over the world. The submitted papers covered a wide range of important topics including but not limited to computing, electronics, artificial intelligence, robotics, security and communications and their applications to the real world. After a double-blind peer review process, 210 submissions (including 6 poster papers) have been selected to be included in these proceedings. One of the meaningful and valuable dimensions of this conference is the way it brings together a large group of technology geniuses in one venue to not only present breakthrough research in future technologies, but also to promote discussions and debate of relevant issues, challenges, opportunities and research findings. The authors hope that readers find the book interesting, exciting and inspiring.

Tight Junctions in Inflammation and Cancer Ajaz A. Bhat, Mohammad Haris, Muzafar A. Macha, Punita Dhawan, 2023-10-12 This book provides an updated account of tight junctions of different epithelia and endothelia and addresses their anatomy, biochemistry, physiology, synthesis, assembly, and modulation. It also discusses the relationship between molecular structure, function, regulation, posttranslational modifications of tight junction proteins and their role in gut microbiota maintenance, epithelial-mesenchymal transition, and intestinal barrier dysfunction-associated disorders important for the progression of human cancers. This book presents the pathological alterations of tight junctions at the blood-brain barrier that intensify or even initiate neurological dysfunction. Further, it reviews the significance of tight junctions and tight junction proteins in cancer development, infectious diseases, allergic reactions, and autoimmune disorders. Lastly, it highlights strategies for modulating tight junctions to enhance drug availability and organ deposition. This book is immensely useful for basic, translational, clinical, and interdisciplinary cancer researchers, practicing oncologists, and immunologists.

Grammaire des prédicats complexes : les constructions nom-verbe (Collection langues et syntaxe) SAMVELIAN Pollet, 2012-06-01 La prédication complexe est un phénomène attesté sous diverses formes dans des langues très variées. Elle consiste à former des séquences syntaxiques fonctionnant comme un prédicat, c'est-à-dire un verbe simple. Les données examinées dans cet

ouvrage sont les constructions nom-verbe en persan. Ce dernier ne dispose que d'environ 250 verbes simples et son lexique verbal comprend essentiellement des prédicats complexes formés d'un verbe et d'un élément préverbal. Cela mène à une réflexion sur des phénomènes présents dans de nombreuses langues. Grammaire des prédicats complexes expose notamment : - la relation entre la compositionnalité et la productivité, - la compatibilité entre le stockage des expressions linguistiques complexes par les locuteurs et l'existence de schémas abstraits réguliers permettant d'analyser ou de produire ces mêmes expressions, - le parallélisme entre les procédés morphologiques et syntaxiques de la construction des lexèmes ainsi que la notion même du verbe lexical par opposition au verbe support.
