Nursery Rearing of Nonhuman Primates in the 21st Century Gene P. Sackett,Gerald Ruppenthal,Kate Elias,2010-05-10 *Nursery Rearing of Nonhuman Primates in the 21st Century* describes how and why nursery rearing of primates can produce adaptable juveniles and adults for research, conservation, and display-educational purposes. The volume details the history of nursery rearing since the mid-19th century, the outcomes of varied nursery rearing methods, the contemporary goals of nursery rearing as well as reference data derived from species commonly reared in nursery or hand-feeding situations. Examples of the changing goals of nursery rearing covered in this volume are the need for biological containment in disease research, the production of specific pathogen-free colonies by removal of neonates from the mother, the production of phenotypes for genetic and molecular biology studies, and the breeding of endangered species for conservation or research purposes.

Good Enough Parent Bruno Bettelheim,1988-03-12 In this book, the preeminent child psychologist of our time gives us the results of his lifelong effort to determine what is most crucial in successful child-rearing. His purpose is not to give parents preset rules for raising their children, but rather to show them how to develop their own insights so that they will understand their own and their children's behavior in different situations and how to cope with it. Above all, he warns, parents must not indulge their impulse to try to create the child they would like to have, but should instead help each child fully develop into the person he or she would like to be.

Rearing Young Stock on Tropical Dairy Farms in Asia John Moran, 2012 Rearing young stock for replacement heifers is probably one of the least well understood and practiced aspects of herd and feeding management on dairy farms throughout the world, particularly on smallholder dairy farms in the tropics. This book addresses all the major concerns of the small holder dairy farmer in Asia. It shows how to attain optimal growth in young stock, so that as cows, they can calve at an appropriate early age at the lowest cost and promptly substitute for any cows culled from the milking herd. This provides continuing returns on the investments of feed, labor and other farm resources. Low reproductive rates and high calf mortality are the major causes of reproductive wastage. This has a direct bearing on culling and replacement strategies and on genetic improvement. In many tropical countries, calf mortality can be as high as 50%. In some areas this can be due to climatic stress on temperate or crossbred stock. While climatic stress compounds the other hazards of calf life, high calf mortality is usually due to diseases and poor feeding management. Rearing Young Stock on Tropical Dairy Farms in Asia encourages the smallholder dairy farmer to maintain their investment in replacement heifers and gives them the tools necessary to achieve realistic targets for mortalities, live weight gain, mating age and age and live weight at first calving. - Shows how to reduce mortality rates of milk fed and weaned heifer replacements in the tropics. - Covers disease prevention and treatment to ensure a longer lifespan of the milking herd. - Companion volume to three previous manuals written by John Moran: Tropical Dairy Farming, Business Management for Tropical Dairy Farmers and Managing High Grade Dairy Cows in the Tropics.
