It's Time for Strategic Scheduling Nathan Levenson,David James,2023-07-03 An accessible guide to creating schedules that amplify school and district priorities, support best practices in teaching and learning, heighten student engagement, and enhance equity. A school's schedule can be as important to education outcomes as its budget or strategic plan. The secret to making the schedule a tool for school improvement is to approach schedule design not as a technical task, centered on making everything fit like Tetris blocks, but as a strategic one. In this book, informed by research and their work with hundreds of schools, scheduling experts Nathan Levenson and David James explore how strategic scheduling can turn a good enough schedule into one that supercharges learning and engagement without additional costs or more FTEs. If you are ready to * Figure out which schedule type is best for your students and staff; * Disrupt harmful tracking and ensure every student has access to highly skilled teachers and rigorous curriculum; * Deliver optimum hours of core instruction while expanding electives and providing opportunities for student voice and choice; * Precisely match staffing to course enrollment to free up personnel and funds for other purposes * Find time for critical intervention and enrichment blocks; and * Communicate scheduling decisions more effectively to parents, families, and district leaders ... then it's time for strategic scheduling. Offering targeted advice for best-practice scheduling at the elementary, middle, and high school levels, this book will help school and district leaders—and the teachers and students they serve—make the most of every school day and every school year.

Human Performance in Planning and Scheduling B L MacCarthy,John R. Wilson,2014-04-21 Understanding how to make the best of human skills and knowledge is essential in the design of technology and jobs, particularly where these involve decision-making and uncertainty. Recent developments have been made in naturalistic decision-making, distributed cognition and situational awareness, particularly with respect to aviation, transport and strategic planning, the nuclear industry and other high-risk industries. Despite the integration of computer-based support systems in production scheduling in recent years, the reality is that most enterprises consist of reactive re-scheduling, involving a high degree of human involvement. It is often with the insight, knowledge and skills of people that scheduling skills can function with any degree of success. Human Performance in Planning and Scheduling covers many industries, including clothing, steel, machine tools, paper/board, and the automobile industry. Using international case studies from various manufacturing industries, they highlight the fact that the human scheduler is a pivotal element in the scheduling process. Each section of the book includes an introduction with an overview of the material to follow, clearly identifying themes, discussion points and highlights inter-connections between the authors' work.

Stochastic Scheduling Subhash C. Sarin,Balaji Nagarajan,Lingrui Liao,2010-03-31 Stochastic scheduling is in the area of production scheduling. There is a dearth of work that analyzes the variability of schedules. In a stochastic environment, in which the processing time of a job is not known with certainty, a schedule is typically analyzed based on the expected value of a performance measure. This book addresses this problem and presents algorithms to determine the variability of a schedule under various machine configurations and objective functions. It is intended for graduate and advanced undergraduate students in manufacturing, operations management, applied mathematics, and computer science, and it is also a good reference book for practitioners. Computer software containing the algorithms is provided on an accompanying website for ease of student and user implementation.
