Selective Exposure To Communication Dolf Zillmann, Jennings Bryant, 2013-07-04 First published in 1985. Research into what is usually referred to as mass communication has concentrated on the societal impact of the media. The ways in which these media influence people and affect their behavior have been at issue. For the most part, undesirable effects were pondered and documented. Only a few desirable effects received similar attention and scrutiny. The research preoccupation with impact has been so pronounced that, comparatively speaking, next to no attention has been paid to questions such as why people enjoy whatever they elect to watch or hear, and more fundamentally, why they elect to watch or hear, in the first place, whatever it is that they elect to watch or hear. Without a symposium on research into selective exposure to informative and entertaining messages nor a publication that brought together the recent research in this area, this volume was put together in an effort to end this dilemma and to put selective-exposure research on the map as a significant research venture.

Discovering Cognitive Architecture by Selectively Influencing Mental Processes Richard Schweickert, Donald L. Fisher, Kyongje Sung, 2012 One of the most successful methods for discovering the way mental processes are organized is to observe the effects in experiments of selectively influencing the processes. Selective influence is crucial in techniques such as Sternberg's additive factor method for reaction times and Jacoby's process dissociation procedure for accuracy. The successful uses of selective influence have encouraged application extensions to complex architectures, to dependent variables such as evoked potentials, and to complex interpretations. But the common themes have become lost in the details of separate uses and specialized terminology. The book gives an introductory and unified account of the many uses of the technique in cognitive psychology. Related models from operations research and human factors are covered. The applications include dual tasks, visual and memory search, timing, categorization, and recall. The book takes a self-contained approach starting with clear explanations of the elementary notions and a building to advanced techniques. The book is written with graduate students in mind, but has content of interest to all researchers in cognitive science and cognitive engineering.

Selective Glycosylations Clay S. Bennett,2017-01-25 A comprehensive summary of novel approaches to the stereoselective construction of glycosidic linkages, covering modern glycosylation methods and their use and application in natural product synthesis and drug discovery. Clearly divided into five sections, the first describes recent advances in classical methodologies in

carbohydrate chemistry, while the second goes on to deal with newer chemistries developed to control selectivity in glycosylation reactions. Section three is devoted to selective glycosylation reactions that rely on the use of catalytic promoters. Section four describes modern approaches for controlling regioselectivity in carbohydrate synthesis. The final section focuses on new developments in the construction of unusual sugars and is rounded off by a presentation of modern procedures for the construction of glycosylated natural products. By providing the latest advances in glycosylation as well as information on mechanistic aspects of the reaction, this is an invaluable reference for both specialists and beginners in this booming interdisciplinary field that includes carbohydrate chemistry, organic synthesis, catalysis, and biochemistry.
