Mobile Influence Chuck Martin,2013-06-11 The explosion of mobile access across the globe has shaken the foundations of the traditional sales funnel, and businesses are scrambling to adapt and find new ways to tap into the market. For all their effort, many have failed to realize that the issue is not how to reach the customer where they are, but where they are going and their mindset at the moment. With the staggering growth in the use of mobile technology as both product research and purchase point, businesses have yet to fully understand the important role mobile devices play in the basic structure of the traditional shopping model and the new importance on linking behavior with location. With the death of the traditional sales funnel comes author Chuck Martin's new model, the Mobile Shopping Life Cycle. Based on the author's in-depth research, Martin has identified the six specific moments in the timeline of the sale which marketers must target effectively in order to reach the mobile buyer. From location-based marketing to mobile payment systems, Martin's model gives marketers access to the tools necessary to build a new sales framework that properly addresses the future of the market.

Android for Work Marziah Karch,2011-01-26 Android is new, Android is open, and Android is fun. It's also serious about business. Android for Work shows you how to harness the power of Android to stay productive and take your office on the road. This book also sheds light on the often daunting task of finding the right Android phone for the business user. Whether this is your first smartphone, your first Android smartphone, or your first attempt to make your phone into a productivity tool, Android for Work gets you started. You'll learn how to manage email and tasks, but you'll also learn how to weed through the sea of games to find specialized productivity tools for a variety of professions. For those that are more interested in an enterprise wide deployment, the book includes an appendix of information on administering Android phones, creating custom interfaces, and creating specialized apps for your enterprise. You'll also learn more about integrating Android with other Google Apps for enterprise.

The Impulse Economy Gary Schwartz,2011-11-01 We live in a world where our mobile devices have become extensions of ourselves. We depend on them for instant connections to entertainment, social media, news, and deals. The phone has become our ticket, loyalty card, and catchall wallet. Networks are faster, phones are smarter, and the mobile shopper is ready to spend money now. What can a business do to maximize the mobile buying power of the new impulse consumer? Gary Schwartz has written a groundbreaking book that outlines the history of the mobile industry and shows just how businesses can build up their mobile platforms to maximize online sales. He'll explain:

- How to minimize barriers between the shopper and a sale.
- How marketers can connect and, more important, reconnect with loyal shoppers.
- The technology available now—and what's coming soon—and how to pick a solution that will deliver results.

But like *Blink* or *Freakonomics*, this isn't just a book for businesses. It's also an eye-opening look into the ways our economy is changing every second of every day. Gary Schwartz analyzes a phenomenon that's modifying people's actions and challenges our assumptions about our behavior as consumers. Anyone interested in the ways our behavior as shoppers is changing—and what we can do to better harness this opportunity—will find this book to be essential reading.

Consumer Optimization Problem Solving Alfred L Norman, 2014-12-15 What algorithms are tractable depends on the speed of the processor. Given the speed of digital computers, polynomial algorithms are considered tractable. But, a human can take several seconds to make one binary comparison between two pens. Given this slow speed, sublinear algorithms are considered tractable for an unaided human and this defines Simon's concept of bounded rationality. Humans make simplifications to solve the intractable consumer optimization problem. Consumers search for goods and services item-by-item, which greatly reduces the number of alternatives to consider. In addition, consumers have operators that can process a set in a single operation. Also, consumers budget by incremental adjustment. In considering consumer performance the question to ask is how close to optimal is consumer performance and not whether consumers optimize as a yes/no question. Given the ordinal nature of utility theory this creates a basic measurement problem. The book presents a review of the literature on consumer performance. This is an opportune time to study consumer procedures because the Internet provides a media to make substantial improvements in consumer performance. The book includes a case study comparing the performance of a digital camera selection code with the advice of sales people. A field experiment demonstrates that the software code provides better advice. Contents: Introduction Computational Complexity Ordering Computational Complexity: Decision Rules Repeated Price Search Repeated Item Search: Forecasting Repeated Item Search: Choice Budgeting How Close to Optimal? Improving Consumer Performance Appendix: CC of the Discrete Two-Stage Budgeting Problem Readership: Students at postgraduate level and academics researching theoretical, computational, behavioural and experimental economics with a specific focus on consumer behaviour, decision making, and optimization.
